I would if I had to do it over again. But I'd rather not go back to
Somalia. Didn't trust that little sob at the K4 traffic circle.

And you have not a single shred of proof that my operation was rejected at the DXCC desk. Which makes all your other claims just very fine dust lining everyone's nostrils.

Have either of us learned anything?

Brian:

I'm perfectly OK to use an electronic keyer. I can already send CW
using a straight key, so I wouldn't need to cobble together a keyer in
an emergency. All I'd need is a momentary on/off switch, and I wouldn't
need a Navaid, or ship's RADAR to find the parts to build one -- but the
old toaster could prove useful!

No, genius, Dave was operating within countries which had governments which issued his license without regard to Part 97, or not, as they pleased. You were not, thus your license grant required you to adhere to International rules covering such cases for your authority to operate.

Tom:

If we all believe our opinions to be true, why WOULDN'T they be "etched in stone?" Is our participation here valid only if we allow ourselves to be swayed over to the other side? If so, then things wouldn't have changed, except for the fact that the same opinions would be coming from different people.

Tell you what -- I challenge you to change my mind about code testing. Come up with an argument that is so logical, so perfectly reasoned, and so completely agreeable that I will throw off two decades of support for code testing and become a True Believer in the NCTA. IOW, take my "etched in stone" opinions, and crack the stone!

I heard a demo transmission of an "Amber Alert" for child kidnapping
alerts on broadcast radio. The sounder is A-M-B-E-R in Morse code.
At around 13WPM.
To must of the public it is just a distinctive sound jingle. No, the
actual info will be given in phone.

Farnsworth is a *method* for making the learning of morse code easier.
It isn't a code at all.

> Thus, Morse is the separate coding schema within an infinite set of schema
> called Farnsworth. If the FCC wanted Farnsworth, they would have said
> Farnsworth.

> But they did not. They said MORSE.

Farnsworth testing is not mandatory. It is optional. It has been
suggested that you contact the FCC and report this gross inequity which
lies heavy in your heart. It has become obvious that you have no more
intention of doing so than you have of contacting the French PTT over
French hams breaking French radio regs. You have this problem of
misdirecting your ire.

There you go again--reading between the lines.

> Yet you called them scofflaws.

Yes, I did. Tell me--how does that indicate my "pride"? I've called
them "scofflaws" on numerous occasions.

> You must now agree that you worked them out
> of their authorizations.

I've said all along that I never worked a French station above 50.2
MHz. They've ALL called me lower in the band. None of this is news.
My comment was that, in the absence of proof, your claim to having
proper permission to operate on the ham bands from Somalia is bogus.

Heh heh heh. 220 thousand per month is roughly 7300 messages
a day or about 340 per hour or about 5 1/2 messages per minute.
Carroll couldn't do that with both knees...but he is "just as good"
in here according to what he writes. :-)

Morning radio, later TV host of a daily (weekday) talk-variety
show broadcast nationally. Died in 1983 at age 80. Bad
musician, not a good joke teller, reasonable personality as a
show host. Had his own DC-3, liked to break an FAA flying
rule now and then, was cited for same. Eventually his
audience got tired of him, his ratings slumped and he was
cancelled (in the 1960s?).

Godfrey's voice would be familiar to older individuals, older than
50, due to early radio exposure. No sign of technical
intelligence.

Don't sweat the Judge. He isn't going to admit any error he has
made in public (several). He can't. :-)

It's a State Department FSO kind of thing. :-)

Brian, only you are stupid enough to believe that a couple of generic
lines published on a web page constitutes the sum total of licensing
details for operating from Somalia. What do they eat for breakfast on
your planet?

It was quite obviously a whim. You announce that you are leaving and
almost immediately, you are "back".

> It took courage to stay and face your insults, Dick's insults, Kelly's
> insults, Jim's insults, Steve's insults, Larry's insults, and especially

I've found you to have a pretty fair sized chip on your shoulder since I
began noticing you posting here. I believe it is still there. A
rational individual might ponder why he is being "insulted". The fact
that you liked Ed best is a small point since you honked him off.

> So now where's your partner in slander crime?

He tired of your increasingly irrational posts. Probably objected to
lines like "partner in slander crime".

> "...that which does not kill me..."
>

Sure did. I learned that some guys will do anything to work Tanzania on
6m.
I also learned that no matter how well one does something, there's
usually an uninvolved whiner who will take issue with it. In this case,
they guy is you and you've repeatedly taken issue with the wrong party.
You've never addressed the issue of the perpetrators.

Yeah, no one has ever submitted one of your cards for DXCC. There's a
very good chance that you made up the operating from Somalia tale.

> Have either of us learned anything?

Sure. I've learned that you don't like it much when shoe is on the
other foot.
You enjoyed attacking the character and ethics of another but didn't
seem to care much for the game when your own ethics and character were
called into question. What'd you learn?

Dave K8MN

I have to say, I'm pretty lucky in that respect. I brought my XYL to a ham shop in NYC and I had to actually refuse a 5 el. 10m Cushcraft. The store manager exclaimed "Well, this is a first for me!"

> Brian

Well, the keyer's on the way and in the event that Rich/KG2ED advises me that he will no longer produce the LI Mercury, it appears that there's a Kent dual paddle is in my future. Here's the keyer I chose. More than sufficient for my needs. (With room to grow.)

http://www.idiompress.com/cmos4.html

Thanks guys. Especially for all your patience. :-)

Sure. But we have to sell that idea to NTIA, who will say "why won't the storm
static take out 5 MHz as well?"

> There was a good reason why the
>old Interstate Police Radiotelegraph Net used 5140 and 5710. The same reason
>ARRL gave when requesting the 5mhz allocation. There are times when it holds
the
>only available HF propagation solution.

Which is one reason NTIA doesn't want us there.

>> How have
>> hams done it all these decades, without 60 meter access?
>
> How can we know how many times it was needed but not available?

Without documentation, our claims will be dismissed as unfounded.

>> 2) US hams have 800 kHz between 3 and 8 MHz - that's 16% of that piece of
>> spectrum. How many kHz do FEMA et al have between 3 and 8 MHz? H

>As I see it that's a non-issue. They can have all they need, through
>assignment by NTIA and FCC.

Not necessarily. They obviously don't want parts used by SWBC, air traffic
control, or the military. And they want exclusive segments.

> AND share a small part of that spectrum with hams for common

HAW! The logs I read specifically state that they are not a complete account of
FCC enforcement actions. And FCC isn't the only ones doing enforcement. Ask
William Bily.

> Problem today is that the dollar drives the FCC, and it's not their fault,
>it's their mandate, what they've been handed.

Yup. Reagan Administration said "we're gonna get the government off your back"
and less enforcement was part of that.

And still irrelevant vis-a-vis Amateur Radio POLICY.

However you ALWAYS have a way of working this non-germane techno-babble
into a discussion in order to hide your other failings.

It doesn't work. It's irrelevant.

>FHSS promises relief...)SNIP)

So does "Preparation H", but you keep showing up...Wonder if I can get a
refund...???

>ALE is already a standard on HF...(SNIP)

Another full paragraph of non-germane techno-babble.

>Irrelevant. This newsgroup is about radio, not aviation.

I know how much you hate having your nose rubbed in your ignorance, and it
seems I have found yet another topic of discussion that sends you running for
cover under the "this is a radio newsgroup" excuse.

Goodie for me.

In the meantime, this is a newsgroup SPECIFICALLY about Amateur Radio
POLICY, Lennie, not "radio" in general, which you try to dilute it to.

You can't can't have your cake and eat it too, Lennie.

>The Osprey is the ONLY VTOL project STILL under development in
> the US military. The Osprey is NOT YET operational. It is still in
> an evaluation phase...millions and millions of tax dollars later, well
> past the original testing completion date(s).

Hey Putzie...Howcome you chide me about the alleged single purpose of this
NG, but then go into discussing the operational vs testing programs of the
Osprey?

>> Also well known to anyone with a passing interest in the Discovery WINGS
>>cable channel is that the United States Marine Corps is the ONLY branch of
>>the US Armed Forces with VTOL capability, and is the ONLY branch of the US
>>Armed Forces to employ it in combat.

> "Combat" among officers at the Pentagon does not qualify as true
> combat operations.

Oh? The AV-8's that flew in Desert Storm were all based in Washington,
DC?

>This newsgroup is not about US military aircraft nor the "superiority"
> of the USMC to anyone else.

Lennie, Lennie, Lennie......

I am not falling into your "Do As I Say..." goosestep.

WE know that you love to lambaste others for allegedly attempting to
"tell" others what they can or cannot discuss.

Ergo YOU may take every one of your "This is a ...." recitations and put
them where the sun does not shine.

>The Osprey is so far over budget, so far past its original development
> completion time (including contract extensions), that it is NOT YET
> operational with any degree of reliability.

OK..So we shall demand that the USMC accept delivery on this aircraft
BEFORE it's reliable...OK by you, Your Putziness?

>>>Please let go of the incessant USMC E-6 Dill Sergeant speechifying.
>>
>> My last honorably held grade was E7, Lennie, and I never served as a
>>DRILL instructor..
>
> I wrote "DILL sergeant." The type that struts in front of recruits,
> campaign hat levelled, swagger stick under arm and continually
> pursing lips in a scowl indicating sucking on too many dill pickles.

I know what you wrote, Lennie. Still don't know what you are talking
about. Nothing of which you "describe" was evident in any phase of my career
in the Marine Corps.

Perhaps in Rear Area Radio Stations there was time for self-proclimating
sergeants to do this, but we had more important things to do in the Corps, Your
Putziness.

>Try to live with the fact. You are having great difficulty adjusting to
> civilian life.

More lack of intimate knowledge of facts, Lennie...Do you ENJOY being this
foolish?

>> By the way, >>MY<< DD214 says "honorable", just like yours did.
>

> My DD-214 is simply a release from active duty. Mine was issued
> in 1956. Four years later, in 1960, I received a nice certificate
> saying I was Honorably Discharged from US Army service after a
> total of 8 years military service.

Congratulations.

Before that certificate was issued, another DD214 was prepared and issued
with all relevant dates of active and inactive service.

That certificate and $5.00 will get you and over priced cup of coffee at
Starbucks.

Your DD214, on the otherhand, was your passkey to G.I.Bill benefits, VA
loan programs, and,if there are any funds left, some VA health benefits.

>> And all your historical revelations about ADA of half a century ago
>will
>>NOT bring you any closer to being right about Amateur Radio nor current
>>application of technology in United States Marine Corps Aviation.
>
> US Army radio station ADA operated on HF radio circuits, carrying...(SNIP)

Thanks for proving my point, Lennie. More useless drivvel about your rear
area "career" in the Army with tons of trivia that means absolutely nothing to
no one but YOU...

>None of the amateur radio activities in the USA have come anywhere
> close to that kind of communications

Where did anyone say it did?

WE have specifically stated that all that crap means NOTHING in Amateur
radio.

>Tsk, tsk, tsk.

The pity, Lennie, is that you are still stupid enough to be churning all
this nonsense out when all we do is make fun of you for doing it.

No one is impressed.

>Aviation Week and Space Technology is a popular, fee-required
> periodical in the aerospace industry.

Wait, Lennie....Wasn't it YOU who, just a few paragraphs ago, was chiding ME
about the nature of this NG?

(scrolling up to look)

(I'm back)

Yep...that was you.

>To repeat, this is NOT a military aviation newsgroup.

To repeat, who are YOU to set the standards for what is discussed and in what context, Your Scumminess?

>1. I was NEVER a "radio clerk."

Yes you were.

>2. My temporary MOSs (Military Occupation Specialty or job
> description) have been...

...COMPLETELY irrelevent to an Amateur Radio newsgroup. (Remember, Your Repetitiveness, YOU are the one who has repeatedly stated in THIS POST ALONE that this is NOT a "military" newsgroup)

>3. I've never claimed that early, later, or even current radio
> communications was any sort of substitute for any civilian
> avocational radio license test (amateur radio license).

Yes you have. You have repeatedly stated that your "experience" and your "education" has placed you head and shoulders above Amateur Radio licensees.

> My advocacy in here was originally for the elimination of a
> morse code test as a requirement for any radio license.

Regardles of what it MAY have been originally, your subsequent behaviour has been representitive of a person with little to offer, no solutions for perceived problems he has addressed, bitterness for those who have what you do not, and a general lack of respect for anything YOU didn't author.

You are a demonstrated liar and an antagonist of grand archived evidence.

You are a L O S E R ! ! ! !

(oooops...ALMOST forgot.......)

PUTZ!

Of course they would, providing you could show documentation that you were indeed granted such legal permission. Since you can't, your QSL's are so much junk, for anyone working toward DXCC.

N2EY wrote:

> Imagine how many Muslims in the USA feel, being blamed for the actions of a few
> extremeists....

But......are the "actions of a few extremists" really so far from the attitudes of multitudes of Islamics? Don't look too far below the surface, you might be stunned by what you find.

The leader of a major American Muslin group was recently shown on TV instructing his followers that "We are violent in other countries but in the US we don't need to be violent. Here we have other means". Means like freedom of religion, even if that religion happens to be interpreted by a large segment of its adherents to mean the destruction of all others. A religion which is at once THE only religion considered to be valid by its practitioners, and also the civil authority. Obviously the many zealots inside it would find it necessary for that particular religion to prevail.

Of course many Muslims are peace loving people. It's the numerous minority which is vocal and violent that rules the day, however. And that is the element which will always predominate for they will always be willing to do whatever it takes to suppress the moderate element to that end.

Nothing new here, just not much PC. We are taught in this country to always respect other religions, and Islam plays right into this universal uniquely American philosophy. If you must respect my religious views, and my religious views include eventually taking over the government of your country and ultimately the world, how can I lose? But I'd be a fool to tell you all about it up front, wouldn't I?

Dig a little deeper into the subject and you won't like what you find. One thing you'll find is that any Muslim is always superior to and of more value than any number of Infidels. That would help explain why Muslims like Saddam Hussein and 9/11 terrorists are widely supported in the Arab world despite their vicious records when it comes to conflicts with any Western entity. They simply are regarded, being True Believers, as far more valuable than any number of WTC victims.

It's an ugly subject but one which we'd better become very familiar. Soon. There will be many innocent victims along the way. Who they will turn out to be, of Eastern or Western descent, will depend on the education process. It is far from being as simple as a mere "religious tolerance" problem.

Here's an excerpt from a newspaper editorial that appeared a few days ago.

Begin excerpt....

"Yes, we must kill the murderers of 9/11, but without becoming murderers and without simply indulging ourselves. We must defend ourselves - without throwing out civil liberties at home, without barring every Muslim student from this country, without forgetting what a huge shadow a powerful America casts over the world and how it can leave people feeling powerless, and without telling the world we're going to do whatever we want because.....now all bets are off.

Because imposing norms and rules on ourselves gives us the credibility to demand the rule of law, religious tolerance, consensual government, pluralism, women's rights, and respect for the notion that my grievance, however deep, doesn't entitle me to do anything to anyone anytime anywhere

"It gives us credibility to say to the Muslim world: Where have you been since 9/11? Where are your voices of reason?You humbly open your prayers in the name of a God of mercy and compassion. But when members of your faith, acting in the name of Islam, murdered Americans or committed suicide against "infidels", your press extolled them as martyrs and your spiritual leaders were largely silent. Other than a few ritual condemnations, they offered no outcry in their mosques; they drew no new moral red lines in their schools. That's a problem, because if there isn't a struggle within Islam - over norms and values - there is going to be a struggle between Islam and us.

"In short, numbing ourselves to the post 9/11 realities will not work. Military operations, while necessary, are not sufficient. Building higher walls may feel comforting, but in today's interconnected world they're an illusion. Our only hope is that people will be restrained by internal walls - norms and values. Visibly imposing them on ourselves and loudly demanding them from others is the only viable survival strategy for our shrinking planet..."

End of excerpt.

Problem is, religious zealots rarely find it within themselves to become moderates or to tolerate others, even as they profess to be doing so. Islam is inherently a non-tolerant religion, in some of its most basic teachings, and certainly in a seriously large pecentage of its clerical interpretations.

The deck is clearly stacked against us in this scrap

(The editorial was entitled "What Noah can teach us bout 9/11", and was written by New York Times syndicated columnist Thomas Friedman.)

Yup, I agree you're an old crank. Absolutely no argument there from any
quarter.

But if you're going to hold an election, be sure to do so in South Florida.
You guys just might be smart enough to operate those fancy touch screen
ballots.

> Burke the Brainiac and The Putz . . the Somali freebander and the

Dave, you brag that you were unaware that you were working French
bootleggers.

Then there was the RRAP exchange with the French amateur, and your reply to
him.

You are virtuous?

Steve, fwiw most of my contacts wanted to know what was happening in
Somalia. It was very early in the deployment and apparently CNN wasn't
enough to satisfy their curiosity.

Brian

There were a fair number of hairy butts in Somalia. No shower tent, and barely a hole to take a crap. We stood around a foundation wall and used the foundation to lay out our shaving kit and get as far as we could with a canteen of water or two. Eventually, we scrounged a pay pnone booth (no glass) from a defunct telephone company, and tilted a 5 gal jerry can of water over the top and let the water trickle out of the loosened cap. Get wet, soap up, rinse off. About every 5th day kept the stink down.

Oh, yeh, the dipstick engineers forgot to consult with the wxman about prevailing winds. They buried a few "urinal tubes" in the sand, but when peeing, the wind blew it back on your trousers and boots.

A French ham told YOU that. Choosing ignorance, you waited two years for
another RRAPper to post the authorizations from the French communication
website veryifying what the French ham told you.

Do you only now realize that you kept working out of band French hams?

I learned that the next time I'm deployed to a foreign country without a government, when my commander gives me permission to operate amateur radio, I'll get it in writing.

Do you still plan to work amateurs outside of their authorizations? FWIW, you've talked Dick into doing so, and you've gotten Ed and Bill Sohl to at least condone it. That's something to be proud of. Two good people starting down that slippery slope.

mean
>the destruction of all others. A religion which is at once THE only religion
>considered to be valid by its practitioners, and also the civil authority.
>Obviously the many zealots inside it would find it necessary for that
particular
>religion to prevail.

A major amateur radio membership organization and its leaders have long
held to [essentially] religious beliefs that morse code skills were
absolutely
necessary to obtaining and holding an amateur radio license. Radio amateurs
were told repeatedly and for a long time that this was so, that radio
amateurs
could exercise their freedom in amateur activity provided they kept up this
morse code skill.

That belief system had been going on so long that it became THE only
religion
considered to be valid by its practitioners. Obviously, the many zealots
inside

it [the belief system] would find it necessary for that particular religion
to
prevail.

> Of course many Muslims are peace loving people. It's the numerous minority
which
>is vocal and violent that rules the day, however. And that is the element
which
>will always predominate for they will always be willing to do whatever it
takes to
>suppress the moderate element to that end.

Of course, many radio amateurs are peace-loving people. It's the minority
which
is vocal and violent that rules the day. That minority does whatever it
takes to
suppress the majority or any dissidents of that religious group.

> Nothing new here, just not much PC. We are taught in this country to always
>respect other religions, and Islam plays right into this universal uniquely
>American philosophy. If you must respect my religious views, and my religious
>views include eventually taking over the government of your country and
ultimately
>the world, how can I lose? But I'd be a fool to tell you all about it up
front,
>wouldn't I?

ARRL always tells all that hams must respect others...while it promotes
and encourages old standards and values such as morse code use.
ARRL has established the canons, issued the encyclicals, and has had
great influence on the government in regards to amateur radio.

Unfortunately, there has been a growing schism of policies between
ARRL and the IARU in regards to both code testing and "what is 'good'
for amateur radio." ARRL is traditionalist, rooted in standards and
practices of older times. IARU and its other national organizations,
is progressive, flexible enough to embrace the future.

> Dig a little deeper into the subject and you won't like what you find. One
thing
>you'll find is that any Muslim is always superior to and of more value than
any
>number of Infidels.

Those against morse code are "infidels." One thing anyone will find is
that any traditionalist PCTA is always superior and of more value than
any number of infidels...according to them.

> It's an ugly subject but one which we'd better become very familiar. Soon.
>There will be many innocent victims along the way.

The ugly subject of traditionalist PCTA religious extremism has been
with amateur radio for decades. Many who opposed such traditionalist

values went their way to other avocations.

>It is far from being as simple as a mere "religious tolerance" problem.

No, it is nothing more than a religious intolerance problem on the part of the PCTA. All must follow their view or be damned forever.

There is but one radio activity and it is preached by ARRL for its followers to worship. Morseodism is alive and sick. The revolution is coming. The traditionalist extremists fear that mightily.

Yes, to this entity all technology she doesn't know about is "irrelevant."

>>ALE is already a standard on HF...(SNIP)
>
> Another full paragraph of non-germane techno-babble.

Hardly...see 97.1 (b) and 97.1 (c).

The NTIA response to the proposed 60 meter amateur band contains "radio amateurs may not be able to hear or understand ALE signals on HF," referring to government-use HF Automatic Link Establishment radio signals.

>>Irrelevant. This newsgroup is about radio, not aviation.
>
> I know how much you hate having your nose rubbed in your ignorance, and it
>seems I have found yet another topic of discussion that sends you running for
>cover under the "this is a radio newsgroup" excuse.

This is not a Chat Room for frustrated individuals to vent their spite and rage against others.

This is not a military aviation newsgroup.

> In the meantime, this is a newsgroup SPECIFICALLY about Amateur Radio
>POLICY, Lennie, not "radio" in general, which you try to dilute it to.

This is not a military aviation newsgroup.

> Hey Putzie...Howcome you chide me about the alleged single purpose of this

>in the Marine Corps.

Tsk, tsk, tsk. Describe the RADIO OPERATION performed in this
illustrious "career."

Describe the sum total of HF radio operations personally done while
in the corpse.

> Your DD214, on the otherhand, was your passkey to G.I.Bill benefits, VA
>loan programs, and,if there are any funds left, some VA health benefits.

This is not a military affairs or veterans benefits newsgroup.

> Thanks for proving my point, Lennie. More useless drivvel about your rear
>area "career" in the Army with tons of trivia that means absolutely nothing to
>no one but YOU...

Describe the actual combat operations performed during the career
in the corpse.

> WE have specifically stated that all that crap means NOTHING in Amateur
>radio.

Of course. Some radio amateurs think that amateur radio operates on
different radio principles than any other radio.

> The pity, Lennie, is that you are still stupid enough to be churning all
>this nonsense out when all we do is make fun of you for doing it.

My fault entirely. I was under the mistaken notion that others might
be interested in operations and technology of other radio services
and radio activity besides amateur radio as written in ARRL.

True, I might as well be speaking to a block of concrete. :-)

> No one is impressed.

Was a poll taken to verify that? :-)

No one is impressed by ex-corpsemen who try to Dill sergeant
everyone into submission.

This newsgroup is not LeJeune or Pendleton.

Neither is it about that cashew nut capital of the world, Guinea-Bisseau.

But it might be from time to time... :-)

> To repeat, who are YOU to set the standards for what is discussed and in
>what context, Your Scumminess?

Oh my, did the Dill sergeant think that someone was telling HIM what to
do? Quick, notify JAG and get them charged under the UCMJ!!! :-)

Better cry to your Section Manager or Director!

>>1. I was NEVER a "radio clerk."
>
> Yes you were.

No. Microwave Radio Relay Operations and Maintenance Supervisor.

The insistence of saying untruths will not make such untruths truthful.

> ...COMPLETELY irrelevent to an Amateur Radio newsgroup. (Remember, Your
>Repetitiveness, YOU are the one who has repeatedly stated in THIS POST ALONE
>that this is NOT a "military" newsgroup)

The Dill sergeant keeps repeating LIES. I continue to explain the truth.

This is not the LIARS club newsgroup.

> Yes you have. You have repeatedly stated that your "experience" and your
>"education" has placed you head and shoulders above Amateur Radio licensees.

Incorrect. Another LIE by the Dill sergeant.

I am a radio-electronics professional. I accept money as compensation for
radio-electronics services done for others. Monetary compensation is the
defining difference between professional and amateur.

I have completed formal education in electronics engineering. That is on
record. I have considerable experience in radio and electronics over the
last half century acquired through my occupation plus formal and informal
education. Informal education does not accrue nice, framable certificates
but it does provide knowledge that is useful in both occupational and
avocational activities.

Many others have done the same thing, including grants of amateur radio
licenses. Amateur radio is principally an avocational pursuit.

>> My advocacy in here was originally for the elimination of a
>> morse code test as a requirement for any radio license.
>
> Regardles of what it MAY have been originally, your subsequent behaviour
>has been representitive of a person with little to offer, no solutions for
>perceived problems he has addressed, bitterness for those who have what you
>do not, and a general lack of respect for anything YOU didn't author.

"Behavior" perceived is a subjective thing. Many in here, principally
PCTAs,
have exhibited uncivil, rude behavior to others having differing opinions of
the code test, amateur radio, and the mythical fantasy of "hams" as
somehow superior to all other forms of humans...including the "superior"

hams looking down at, denigrating "lesser" class licensees.

This is adequately exemplified by the Dill sergeant's writing as follows -

> You are a demonstrated liar and an antagonist of grand archived
>evidence.
>
> You are a L O S E R ! ! ! !
>
> (oooops...ALMOST forgot.......)
>
> PUTZ!

Quod Erat Demonstrandum

Unless they aren't a government, just a bunch of unemployed khat chewing AK
carrying pedestrians at the K4 traffic circle. Then my commander gets to
make the decisions.

I usually didn't eat breakfast in Somalia. It was just another MRE. I
think Operation Restore Hope may have merely been a method of rotating
outdated rations.

Someone claiming to be French and a ham claimed that was so. You'll
note that he didn't challenge my authorization to be CQing and running a
pileup below 50.200.

> Choosing ignorance, you waited two years for
> another RRAPper to post the authorizations from the French communication

Two years later and I was back in the U.S. putting up antennas.

> Do you only now realize that you kept working out of band French hams?

Let me restate my position that it is absolutely not my responsibility
to check the operating restrictions of foreign stations who call and
work me no matter where in the world I am operating. I need only make
certain that I am operating where I am permitted to be.

I can state unequivocally that I will not begin checking to ensure that
each DX station I work is operating within the terms of his license. He
and his licensing authority are responsible for that. Your blatherings
about Dick and Bill are just more silliness.

Passing the exam is the final proof that a learning experience has taken
place.

> How is the "method" distinguished from the exam?

How do you believe it is distinguished given that the exam need not be
taken using the Farnsworth spacing?

> > It isn't a code at all.
>
> Then it cannot be examined. The exam is a code exam. And the code is
> Morse.

Farnsworth spacing during testing is not mandatory. I have pointed it
out several times. Others have pointed it out several times. You've
had no comment on those statements.

> > > Thus, Morse is the separate coding schema within an infinite set of

>
> You have them in your logs. It would be merely hearsay if I reported it.

My comment began, "Farnsworth testing is not mandatory". Again you have
no comment on that. Regarding French 6m operations: Yes it would be
hearsay. It has always been only hearsay.

> > You have this problem of misdirecting your ire.
>

Oh, I couldn't do that, Brian. It would only be hearsay, heh heh. You
seem to have a direct interest in the use of Farnsworth spacing in morse
testing. Give someone at the FCC a buzz and find out what's what.

It seems funny that you'd make that kind of absurd statement when I have
not denied working those stations and in fact have always maintained
that I've worked no French stations on frequencies above 50.200 MHz.
Sorta shoots your entire false premise down in flames.

>So...this newsgroup is ANTI-technology?

YOU are the one who constantly "redirects" the conversations here, Your Supreme Putziness. It is either about Amateur Radio Policy, or it's not.

YOU only care to discuss "technology" when you can't substantiate other rants you are knee deep in.

>> However you ALWAYS have a way of working this non-germane techno-babble
>>into a discussion in order to hide your other failings.
>>
>> It doesn't work. It's irrelevant.
>
> Yes, to this entity all technology she doesn't know about is "irrelevant."

"She" can read the title of the NG, Lennie:

"rec.radio.amateur.POLICY" (emphasis mine)

>This is not a Chat Room for frustrated individuals to vent their spite
> and rage against others.

Then why are YOU here? That's ALL you do, Lennie.

>This is not a military aviation newsgroup.

Then why do you continue to discuss it?

>This is not a military aviation newsgroup.

Then why do you continue to discuss it?

>An osprey is a bird. You want the bird? I give you the bird.

Too late...I geave it to you first. You keep it.

>Tsk, tsk, tsk. Describe the RADIO OPERATION performed in this
> illustrious "career."

Not germane to AMATEUR RADIO POLICY...I don't have to get into those "been there done that" rants of yours, Lennie.

>Describe the sum total of HF radio operations personally done while
> in the corpse.

I have never slept with your wife, Lennie.

>This is not a military affairs or veterans benefits newsgroup.

Then why do yo9u continue to discuss it?

>Describe the actual combat operations performed during the career
> in the corpse.

Again, NOT GERMANE to AMATEUR RADIO POLICY. That "Back in 19xx" line is
yours, Lennie.

>Of course. Some radio amateurs think that amateur radio operates on
> different radio principles than any other radio.

Nope. But Amatuer Radio PRACTICE is different than other services.
Anyway, with the exception of your "service" in the Army, you've neer been a
radio operator in ANY service.

>My fault entirely. I was under the mistaken notion that others might
> be interested in operations and technology of other radio services
> and radio activity besides amateur radio as written in ARRL.

You've been TOLD by others for years taht we don't give a hoot about your
ADA days. Once you got passed the second or third retelling of the same
irrelevant tale, it got stale.

It's boring.

>True, I might as well be speaking to a block of concrete.

Funny, I've been thinking the same thing.

>> Yes you were.
>
> No. Microwave Radio Relay Operations and Maintenance Supervisor.
>
> The insistence of saying untruths will not make such untruths truthful.

Like repeating over and over how untruthful the ARRL is?

Like repeating over and over how the ARRL has forced "religious beliefs"
on others?

Yeah...we've heard THAT before.

>The Dill sergeant keeps repeating LIES. I continue to explain the truth.

Then WHERE is your "truth" about the ARRL "dishonesty"...???

>>Yes you have. You have repeatedly stated that your "experience" and
>your
>>"education" has placed you head and shoulders above Amateur Radio licensees.
>
> Incorrect. Another LIE by the Dill sergeant.

If you say so, Lennie. Denying your past behaviour will not erase it from USENET archives.

>I am a radio-electronics professional.

Not based on your conduct here, you're not.

>I accept money as compensation for
> radio-electronics services done for others.

Then based on your conduct in here, I'd say someone has a pretty good case for fraud..

>Monetary compensation is the
> defining difference between professional and amateur.

If you think that money is all that stands betweeen "professionalism" and "amateur", then you are even worse off than I thought.

Not that it could get ANY worse than what it is...

They have all of it - if and when they want it. The reality of
military and spook comms worldwide is that any frequemcy can be used
as long as (1) they don't identify and their ID cannot be accurately
determined without precision direction finding and (2) they don't
interfere with any essential (government) communications in their
homne country.

Don't bother searching the net for that reference - it's unwritten
law.

>3) Maybe FEMA doesn't want our help that much. Maybe they think it

Since you and the ARRL use the term "Farnsworth" interchangeably with Morse,
you are saying that the code exam is not mandatory for an HF license.

> Regarding French 6m operations: Yes it would be hearsay. It has always
been only hearsay.

It has been yoursay. Do you change your story now?

> > > You have this problem of misdirecting your ire.

Were you not the one who worked the French amateurs on 6M out of band?

> Oh, I couldn't do that, Brian. It would only be hearsay, heh heh. You
> seem to have a direct interest in the use of Farnsworth spacing in morse
> testing. Give someone at the FCC a buzz and find out what's what.

Why? I read their regulation on the matter and it is very clear.

> > Unless the FCC or the UN prosecutes me, my claim stands.
>
> Your claim remains just a claim.

Lack of prosecution is evidence that what I did was legal, similar to the
PCTA argument that Farnsworth really means Morse because the FCC hasn't put
a stop to it.

Want to get this settled? Submit a Petition for Declaratory Ruling
to the FCC (procedures are in Part 1 of the Rules) and sit back and
wait for the laughter.....

Yep, by now you've been pretty well educated on it, regardless of the fact that you must still deny,deny,deny just to save some semblence of self esteem. You trade that for looking like a complete nincompoop. Not too bad a deal, considering.

Dick, you must have forgotten what I said prior to restructuring. What I feared most about restructuring was a lack of enforcement. And what I feared most about maintaining the Status Quo was a lack of enforcement.

You can no longer rely on a Morse Code exam to filter out the idiots because the idiots have learned the code. They showed they could do that a long time ago.

73, Brian

Yep, while I was operating right where I was permitted to be. You still
haven't directed you ire toward the French authorities or their national
IARU society. If I'm smoking a cigarette in the mall parking lot and
some kid sees me smoking and decides to light up, he has violated the
law. I didn't entice him to do it and I'm not responsible for his
action. I'm certainly not responsible for checking his I.D. Sorry,
junior, you're on the wrong track.

> > Oh, I couldn't do that, Brian. It would only be hearsay, heh heh. You

I'm sure it is. That's why they're taking no action and will likely
take no action. Give 'em a call and tell 'em how to interpret their
regs.

> > > Unless the FCC or the UN prosecutes me, my claim stands.

Incorrect. Much earlier I pointed out the LACK of any US
amateur radio regulation specifying spacing. The old (already
outdated in current Part 97) CCITT recommendation does
not address spacing.

>> > > Thus, Morse is the separate coding schema within an infinite set of

It would seem that the Judge's pronouncements are hearsay
for the most part. When challenged, he assumes Herr Robust
demanding papers (written proof) or disguises it with the
challenger having no clearance to know something classified.

>> > You have this problem of misdirecting your ire.
>>
>> It is a problem for whom?
>
>It calls your judgement into question and pisses off those toward whom

There was no mistake. It is common for feldpolizei such as
Herr Robust to become pissed off when challenged on anything.

Herr Robust should give himself a "buzz" and acknowledge
that stamping about, issuing orders tends to piss off a great
many more people.

>> > > > > > > > > Cite the legal reference

>
>Your claim remains just a claim.

Claims that certain State Department radio procedures of the
1980s are not stupid when compared to common every-other-
radio-service procedures of the 1950s are just claims.

But they can't be challenged (another claim) because no one
else is "cleared for the information" is just a claim.

"Claims" have always been valid for real property. A claim to
intellectual property is not for real property. Herr Robust's
claims lack intellectualism, thus compounding his errors.

Who did that Herr Robust?

That was a funny picture. At least to anyone with a sense of humor.

It was sent by mistake, a newly-received file from another mixed up with a file that was intended to be sent.

Tsk, tsk. Some long-time "we know what is best for everyone" amateurs just can't see humor in harmless images. :-)

Aw, you think that you are the only one who must "lecture the troops?" Jawohl, herr Robust!

Humor? QRU. QRT.

Carroll's response proves only that he is looking in a mirror
when writing messages, mistaking his own image for that
of others.

Carroll is a traditional extremist PCTA, a Believer in the old
system, inflexible, thinking not of the future of others, only for
a maintenance of his own status quo in rank, title, privileges
in amateur radio.

The difference being that they don't hijack jets and slam them and all their passengers into
large buildings loaded with other innocent people. Granted, zealots are zealots, but seems the Islamic religion has an edge on the kind who are suicidal nuts.
How can you trust in someone who you know has likeminded friends, neighbors and relatives who hate your guts plenty enough to kill you just because you're not Islamic, or because you're an American. Even though America is home to many other Islamics?

The issue seems important to you or you wouldn't continue all the
blather.
In the end, you don't seem interested in pursuit of a remedy. I've
given you advice and now Phil has given you some advice. Your response
indicates that you've suddenly decided that the matter isn't very
important after all.

Give us that stuff about others name calling, personal insult and
denigration.
You know--the one you trotted out just recently. There is nothing
classified about amateur radio morse testing.

> >> > You have this problem of misdirecting your ire.

They certainly were just claims. They did not involve the ethics of operating an amateur radio station without license or authorized permission. Your claims that the USG wasn't using morse were, after all, just claims.

> But they can't be challenged (another claim) because no one
> else is "cleared for the information" is just a claim.

Those are claims that you'll, despite your growing curiousity, will just have to live with.

> "Claims" have always been valid for real property. A claim to
> intellectual property is not for real property. Herr Robust's
> claims lack intellectualism, thus compounding his errors.

Maybe Cecil will permit you to borrow his dictionary so you can research "claim". Leonardo's desire for insider information on classified material show that he has compounded his interest.

Why, you did!

> That was a funny picture. At least to anyone with a sense of humor.

It was funny that it was sent in lieu of a copy of an FCC permit.
Describing the photo as you lecturing on amateur radio was also funny.
Didn't you think so?

> It was sent by mistake, a newly-received file from another mixed
> up with a file that was intended to be sent.

I remember you saying that on several occasions but that is just a
claim.

> Tsk, tsk. Some long-time "we know what is best for everyone"
> amateurs just can't see humor in harmless images. :-)

My sense of humor works fine. Didn't you find humor in my comment?

> Aw, you think that you are the only one who must "lecture the
> troops?" Jawohl, herr Robust!

No, Lennie, I'm just a guy who holds some credentials and experience on
the subject. Then there's the fact that I don't need to drop my
trousers and turn around to do my lecturing.

> Humor? QRU. QRT.

I sincerely believe the QRU part.

A QRT on your part would likely be met with a round of applause.

>Who did that Herr Robust?

As Dave said...Loads of laughs to see you trot out the "Hams are spiteful cuz they call people names" rants, only to gear upi your own brand of name-calling.

>That was a funny picture. At least to anyone with a sense of humor.

Had you sent an e mail "Here's a Funny Pic", yes, iot would have been.

However it was sent to multiple recipients under false pretenses. Some would call that a lie. Yuo call it an "error", however considering your professed professionalism in electronics, I rather think it WAS just a lie.

>It was sent by mistake, a newly-received file from another mixed
> up with a file that was intended to be sent.

The in addition to "liar" and "antagonist", we can now add "technically incompetent".

>Tsk, tsk. Some long-time "we know what is best for everyone"
> amateurs just can't see humor in harmless images.

Tis, tist, tisk. Some ALLEGED long-time electronics professional with that "I know what is best for you" attiude gets a nosebleed when he gets his rubbed in his own oozing business.

>Humor? QRU. QRT

Take this to the bank, Your Scumminess...."WE" find NOTHING about liars, incompetents and antagonists even the least bit funny.

Putz.

I won't.

Some look really nice from a distance, but up close they make you want to run away.

Some are finicky and high maintenance while others are solid and rugged, needing just a bit of basic attention to stay in perfect shape.

Some are great when new but fall apart with a little use, while others age gracefully and become even more attractive and fun after decades of familiarity.

Some are easily adaptable to a wide variety of situations while others must be kept in a very controlled environment in order to function at all.

There are many you will want to try out but relatively few you will want to take home for keeps.

I don't see them commandeering public transportation and using them as
missiles.

You should have heard the election ads in St. Louis against Ashcroft, the
sound of an explosion (as in OK City), the sound of a bonfire (a black
church burning), and on and on. It was the most racist garbage I'd heard in
a long time.

Oh yeh, they kept the polls in certain St. Louis neighborhoods open for an
extra two hours while the church busses made their rounds.

And you bought in to it.

Dave, there is no sudden change of opinion. Now you claim the Bill of
Rights says I MUST petition my government? Especially about something that
is crystal clear in the regulations?

Perhaps Len isn't so far off the mark as Steve claims he is, re: Herr.

I don't know if you're trying to be funny, Larry, or you are that ignorant of your voracious opinion regarding CW testing. You are unchangeable about CW testing--because on that issue you are incapable of logic and reasoning.

Why would one wish to change your mind, anyway? Do *you* have a problem with your opinion on the CW testing issue? Do *you* have a problem with people who are opposed to your opinion on the CW testing issue? Do *you* realize how much it is your side of the opinion that whines about the CW testing issue? Do *you* realize that the other side of the CW testing issue is the side that has little reason to whine(?)--CW testing and CW focus in licensing matters is waning.

The ARRL is blowing smoke. 220 activity has been way down
for years, and it is difficult to find new or used gear for 220, let
alone a dual-bander which has 220 on it, or even a tri-bander.
When's the last time you saw a 220 HT? I drive cross-country
and never hear activity, except at commuter time when a few
husbands and wives are talking. AND, there is a reason why it is
so popular between OMs & their xyl's. These are the women whose
OMs had them rush to get the Novice license BEFORE it was taken
out of private ham's hands and placed under the control of VECs.
These guys simply had two of their buddies sign off on a 610 so their
xyl's could get a novice license before it went to the VECs. If Riley
retested women operating on 220, I venture to say 98% do not know
a dit from a dah, let alone passing a theory test. Typical comment I
heard on 220 from one gal, "Hey Lonnie, while you was talkin' some
funny noise come on through the black thing where your voice comes
out of, it was like little short squeels, on and off, then quit. it comes
on
about every ten minutes and does the same thingy. Of course, the gal
is talking about the CW IDer on the repeater. There's many gems you
hear from these gals, especially the ones who were formerly on CB with
their husbands. They bring all their CB slang and operating practices to
220. "Hey Lonnie, some guys are bleeding on you, They walked all over
you last time." In this case, she was describing a station that was
requesting
to use the repeater. There are many other gems, just listen.

Lou, the Memphis a/c man

Well Lou in Memphis,
Link into the Nashville 220 system through the 2m repeater in Bucksnort TN
and you can talk on 220 from Memphis to Atlanta, with a ht most of the way
(www.w4rpt.com). Lots of 220 stuff on ebay. Icom's tribander ht covers the
band..Do some research before you post....most of the CB lingo is on 2
meters, not 220 and 450.

SIMPLE MOD

You change all crystals in the 10 meter position to 1mhz LOWER

That gives 26 to 28 mhz operation and that is all you need to do 98% of the
time.

This is what this hypocrite promotes for himself but chastises
others for doing. BEGIN OF QUOTED MATERIAL:
****

rec.radio.cb

O4AT trade proposal...

Hi Steve

I have a MINT Radio Shack TRC 457 base ssb unit. It was made in 78!

Has the Uniden 858 PLL chip. I also have the SECRET CB modification info for this radio, The radio itself has NEVER been opened up. It works and looks like new. Comes with a RS amplified base station mike ta boot!

I would take $50.00 cash and the 04AT for it, if the HT is in good shape. Obviously we would each pay our own shipping.

n8wwm@aol.com

****

Of course. But I was referring to what outfits like FEMA have as part of the
'official' allocations, for drills and such.

Of course not. FCC is a 'legacy' agency. Perhaps if the various violations were
color coded....

> I wonder whether they can activate us retirees as a "Retired
> Reserve" ?? If it cames down to guns and dogs I don't know on
> which side of the dog I'd wind yp....

Me either.

I do know that:

- after September, 1939, US hams were cautioned not to QSO hams in combatant countries, nor to discuss on-air things of strategic importance like the weather

- in 1940 all US hams were required to sign loyalty oaths saying that they were citizens and not agents of any foreign government

- in 1941 parts of the 80 meter band were 'voluntarily' given up to Army use.

Heh heh heh. The JUDGE ("heah com de judge, heah com de judge...") has ruled. :-)

Funny, the "obscene" photo was in rather large private e-mail distribution prior to its two-day display on a vile, libelous little AOL homepage. The home page author is none other than the driver of the putzmobile who posted in here under a new AOL screen name. That same entity bitterly resented AOL deleting his home page in yet another vile, libelous little message in here. Tsk, tsk, tsk. :-)

Need something in writing? Wait long enough and the vile little egos (PCTA Believers, Ham-Life-Stylers, Long-Time Morseodists) will be so sore they can't stand it any longer and post all sorts of things in public view. THEY do the "writing" for me. Tsk, tsk, tsk. :-)

Look at the Judge for an example. He just can't let go of anything non-complimentary to his superbness. He is compelled to keep on, keep on, keep on denying he ever did something incorrect. He has the Control Freak syndrome right out of the psych primer.

In another posting under this thread he believes that the mistakenly-attached file was sent to all radio amateurs in the USA. It must be so because he righteously proclaims "an insult to all hams." Funny because few others (outside of the large private e-mail dispersion among non-hams) ever saw it. You saw it. A few others saw it. That was it among hams. Nowhere on the photo is there any evidence of "radio activity" other than the pilot (maybe) wearing earphones (hard to

discern in limited resolution).

I may take that back. The photo of the converted B-26 is flying over a forest region. That means a lot of wood on the ground in the background. Every forest has some dead wood in it. So, there must be some (mental) dead wood among hams viewing it. Obviously no sense of humor among the judges and putz-mobile drivers, only outraged, severely-injured egos raging for retribution for insults against their noble, pure superiornesses. Tsk, tsk, tsk.

On the Somalia thing, da Judge has to assert hisself (it's in the nature of control freaks, ya know), get up on his little hill and talk down to the troops, lecturing them. Da Judge wasn't there but he "knows all about it" and wants to make a Federal Case out of it all. His superior Pride was sorely wounded. No "inferior class" ham can tell HIM what to do!

Da Judge "know de law"...because he say he do. :-)

>You might want to submit it to the DXCC desk for comment. ;^)

I don't think so. There's no evidence that any of them there have a sense of humor. Once in a while, multiple personalities, but no sense of humor as among ordinary humans.

Desks are made of wood (among other things). The photo of the converted B-26 had it flying over wood. Paper is made largely from wood pulp. Humorless people get a woody over not being amused. They can't see the forest because of the wood. :-)

1092. Re: Here's The Picture Lennie Doesn't Want You to See

>Why, you did!

Incorrect. I was in the US Army, not the USAF or the Forest Service.

Da Judge claims to have served in the USAF.

Just where in that photo is there any evidence of any kind of radio
activity?

>> That was a funny picture. At least to anyone with a sense of humor.
>
>It was funny that it was sent in lieu of a copy of an FCC permit.
>Describing the photo as you lecturing on amateur radio was also funny.
>Didn't you think so?

That photo, mistakenly sent and then publicly acknowledged in
here as a mistake, was replaced by no less than THREE
separate scans of an FCC First Class Radiotelephone
(Commercial) LICENSE. It was not a "permit."

A Restricted Third Class Radiotelephone license is a permit.

That the recipient of three separate scans did not view the
attachments is no validation of your claims. The recepient
claimed he did not open those attachments in here, publicly.

The photo is taken in-flight (fast shutter speed, see propellors)
of a converted B-26 over a forest. Good quality photograph
with medium-resolution scanning. Nothing about it indicates
any sort of radio activity.

>> It was sent by mistake, a newly-received file from another mixed
>> up with a file that was intended to be sent.
>
>I remember you saying that on several occasions but that is just a
>claim.

I sent the scan of my first first phone license no less than three
times to the intended recipient. Not a claim, it is fact.

The recipient acknowledges receipt of at least one of them but
claims that he did not view it but merely trashed the file.

That's in writing. In the archives.

>My sense of humor works fine. Didn't you find humor in my comment?

There is no "humor" in your comment. There is irritation
bordering on rage because you (wrongly) feel a "target" of
imaginary wrongdoing.

Not my problem. Yours.

>No, Lennie, I'm just a guy who holds some credentials and experience on
>the subject.

You have "credentials and experience" in flying forest fire
aircraft?!?

>Then there's the fact that I don't need to drop my
>trousers and turn around to do my lecturing.

Da Judge do dat most of de time to everyone who doesn't
agree with his superiorness. QED.

>A QRT on your part would likely be met with a round of applause.

Then you are an audience of one. Do you have clap?

Hey Lou,

I seem to hear more "slang" on 11-meters that was "borrowed" from the ham bands than the other way around. After all, wasn't "handle" originally an amateur term?

It seems to be a claim. Nobody opened it.

> The recipient acknowledges receipt of at least one of them but
> claims that he did not view it but merely trashed the file.

Yeah, I remember him acknowledging that he'd received other files from
you.
I don't blame him for deleting it. After receiving the first, you'd
have a tough time believing that anything else would be legit.

> That's in writing. In the archives.

Who viewed it?

> >My sense of humor works fine. Didn't you find humor in my comment?

How can I be the target of something imaginary? How do you know if I am
experiencing irriation bordering on rage?

> Not my problem. Yours.

You sent the file. I didn't.

> >No, Lennie, I'm just a guy who holds some credentials and experience on
> >the subject.
>
> You have "credentials and experience" in flying forest fire
> aircraft?!?

Irrelevant. This is an amateur radio newsgroup. Aircraft and forest
fires are off-topic. Know much about amateur radio?

> >Then there's the fact that I don't need to drop my

> Then you are an audience of one. Do you have clap?

Is this another of your lectures on the topic of how others use insult
and personal denigration toward you?

Yep, it's for real, Bert. You'll note that there have been no bidders. There is an active key maker on the web. His stuff is shown without pricing. When I e-mailed for pricing, he told me that the paddle I was interested in was over $500! In my opinion, most of the paddles sold today are enormously overpriced.

It's the FT-897 Brainiac.

Which is why he's not Senator Ashcroft today instead of attorney general. Also why MO has a demo governor today. VERY narrow margins took the election, and shady stuff went on also in Kansas City.

Of course you see exactly what you want to see. That's the problem with jackasses like you.
Putz is another matter entirely. He tries to manufacture what he wants to see. Of course saying it's so never makes it so, and his record speaks for itself, just like that of everyone else. He'd love for ham radio to become so trivial that FCC and NTIA could in good conscience just close it completely down. With induhviduals like you to shore it up, that's more than just a remote possibility.

The funny thing, Dave, is that Lennie called me a "coward" and a "wimp" for not opening the other files.

However e mail sent to "lenover21" and "lenof21" is returned "recipient is not accepting mail from this account".

Who's the coward and wimp?

Wouldn't you know it? The Putz not only has no clue NOR a license, but he can't discern the difference between disgust and rage.

Kelly, since when did you get to renumber the portable rig that replaced the
FT-290RII/690RII/790RII?

Sad but true. Like Illinois, the rest of the state is dominated by a
metropolitan area and all their liberal garbage.

Bert that's a "cult" key. Like the McElroy Model 60 Speed Stream, the 30's bug built on a chrome plated teardrop - shaped base, their fans believe there's none better.. They, too, were rare and valuable, in some circles still are, but the last one I saw go on Ebay went way below what they'd been bringing a year or so earlier.
I doubt the N2DAN paddle gets a single bid. His opening bid, high as it is, is below his minimum reserve, which he won't disclose. Looks like the market has fell out here just like Wall Street. It happens.

Dick

Dick, apparently I take amateur radio a little more seriously than you give
me credit for. I don't want it to vanish once the parents of the boomers go
to their final resting places.

Bert, yep, its real. Look at the demographics of key users. They're either at their peak earning years or trying to figure out what to do with those Social Security checks that keeps piling up.

So guess who defeated the CCW referendum? The same urban "minorities" who were carrying and shooting anyway! Don't need no stinkin' law allowing their victims to carry, too! Might be able to defend themselves!

I was highly upset and couldn't believe it wasn't passed. I travelled
Illinois and Missouri for the USACE and saw the little ccw signs EVERYWHERE
across the state.

But some outside money and some DNC types spoke out against Liberty again.

>You didn't send it?

Send what?

That photo scan was put on a public AOL home page by
someone calling herself "Nevertrustlennie." That same
person posted in this newsgroup, advertising it.

That wasn't me.

It's fairly obvious that "Nevertrustlennie" is the putzmobile
driver who vented rage and fury over that home page being
deleted by AOL. :-)

Thousands have received that image through private e-mail.
It's fair to say that nearly all who opened the image were
amused by it.

>Oh, I see. NOW a license is a permit. It just isn't a permit when it
>was your First Class Radiotelephone.

No, a "permit" is a license obtained without having to take any
test. Another example is the old, no-longer-required CB
license.

The First Class Radiotelephone (commercial) required taking a
test (four parts to it) at an FCC field office in 1956.

It is called a license. By the FCC, by radio stations, anyone
except ego-bruised "superiors" in this newsgroup.

>

>straight out your ass to mere radio amateurs.

A person of your delicate sensibilities should not swear.

Neither should you talk out of your own ass at non-amateurs.

But you DO that.

Maybe the EPA or OSHA should get on that...all the morseodist
flatulism wafting about...

>> >> It was sent by mistake, a newly-received file from another mixed

>
>> Not my problem. Yours.
>
>You sent the file. I didn't.

Sent what file? I've sent many, many files in my time.

I didn't post an AOL home page accessible to all for
two days.

>
>> >No, Lennie, I'm just a guy who holds some credentials and experience on
>> >the subject.

>>
>> You have "credentials and experience" in flying forest fire
>> aircraft?!?
>
>Irrelevant. This is an amateur radio newsgroup. Aircraft and forest
>fires are off-topic. Know much about amateur radio?

More than you'd be willing to acknowledge. :-)

US amateur radio has been readily accessible by the public
for many years...longer than Da Judge bin licensed.

Nothing is secret in US amateur radio.

>I didn't send such a photo. You did.

Send what?

How do you know what someone else received in e-mail?

Why do you claim god-like powers to divine things that
mere mortals cannot?

>> >A QRT on your part would likely be met with a round of applause.
>>
>> Then you are an audience of one. Do you have clap?
>
>Is this another of your lectures on the topic of how others use insult
>and personal denigration toward you?

The act of applauding is to bring hands together to make a
"clap" sound...repeatedly so for applause. Do you clap?

:-)

>itself, just like that of everyone else.

Now, now. I don't manufacture anything. I just point it out. It
already exists.

I haven't done any recording recently.

Please fill me in on this new technology...a recording that plays
by itself, no player needed. Sounds exciting.

>He'd love for ham radio to become
>so trivial that FCC and NTIA could in good conscience just close it
>completely down.

I don't "love" any such thing. All I am advocating is elimination
of the morse code test from the license exam.

Unfortunately, some long-time morseodists are against that,
so passionate in their belief for an Ancient Radiotelegraph
Service, that they resort to name-calling in public against all
who oppose their religion.

>With induhviduals like you to shore it up, that's more
>than just a remote possibility.

Carroll should realize that he is just an "induhvidual" in his sacred belief. He has no "backing." It is a false front.

Now...what has Carroll to say about the NTIA comment on the proposed US amateur 60 meter band? [as if we didn't know...]

:-)

Yes, it's for real, Bert. It's also eBay. Note that there are no bids.

Rare and collectible items draw whatever the market will bear. I thought the $6000 SX-88 was expensive until I saw an unbuilt AT-1 go for $5100 (not a typo).

I do with your part of the post about VE's Lou. I hear a lot of new hams that by their operation it doesnt pass the "smell test" if you know what I mean.

Rather than give the hams any spectrum for data experimentation and/or secure networks / communications, my crystal ball sees the gradual phase out of amateur radio. Or perhaps the formation of the "Ham Youth"

You just said that a permit is a license. Where does the FCC make the
distinction between the two?

> The First Class Radiotelephone (commercial) required taking a
> test (four parts to it) at an FCC field office in 1956.

Wow! There must not be many holders if you had to take the test at a
field office in '56.

> It is called a license. By the FCC, by radio stations, anyone
> except ego-bruised "superiors" in this newsgroup.

I passed quite a number of licensing exams during the time I've been a
radio amateur. I have a license. Maybe you can take some tests and
obtain a radio amateur license too. It'll still be a permit to operate
an amateur station.

That's not swearing, Len. That's descriptive of what I saw in the
photo.

> Neither should you talk out of your own ass at non-amateurs.
>
> But you DO that.

Nope. I've not sent any unsolicted photos to anyone--not even to you.

> for many years...longer than Da Judge bin licensed.

>
> Nothing is secret in US amateur radio.

Just because nothing is secret does not mean that know all or that you
have any experience. Sorry I missed the first five decades of amateur
radio. I was trying to arrange an earlier birth but it got really
complicated.

> >I didn't send such a photo. You did.
>
> Send what?
>
> How do you know what someone else received in e-mail?

1) The person who received it told us so

2) The material was shown on an AOL webpage and that began a fire in
your shriveled little heart.

> Why do you claim god-like powers to divine things that
> mere mortals cannot?

Let's see now....hmmmmm....that's a tricky one. I guess I read the
posts and looked at the AOL page.

Actually very few are overpriced for the time & materials which are
put into 'em considering their low volmes of production Dave, nobody
out there is getting wealthy making & selling keys, bugs and paddles.
If they were selling at a rate of thousands per month yeah, they would
be a lot less expensive. At 10-20 a month I wouldn't turn the shop
lights on to make 'em.

In this particular case the thing is a collector's cult piece so all
bets are off when it comes to market value. A clean SX-88 sold for
something like $15,000 a year or so ago on e-bay. A '55 Mercedes 300SL
Gullwing sold for around $3,500 off the showroom floor in '55. Ten
years ago I saw one go at an auction on Long Island for $650,000.

Really? You need to get out more. I had no problem buying a brand spanking new Kenwood TH-F6A tri-band HT. 144, 220, 440. Sure beats having a tri-band with 6m (e.g. VX-5) I wasn't the only one buying one at Dayton.

My local RACES group is working to add a packet 220 system just so we don't jam our 2m and 440 voice when we operate.

I see us keeping our HF bands, but 220 mHz
and higher bands will likely be lost or shared in the
near future as more of the "wireless" consumer targeted
devices hit the market. Not cell phones but more likely
remote-control gadgets and similar.
Looks like Wayne Green may have been right in his
prognostications from 10 years ago?

That's true but given any opportunity at all you can bet that those
far right fringe types would impose their will on the rest of us. Up
to and including perverting the Constitution to make it happen.
Rememeber the words to "Onward Christian Soldiers"??

> into
> large buildings loaded with other innocent people. Granted, zealots are zealots, but
seems
> the Islamic religion has an edge on the kind who are suicidal nuts.

This is not the first time we've had the problem. Roll back nearly six
decades and recall the Kamakazis. Those suicidal nuts killed a helluva
lot of Yanks and sank some hundreds of our ships. Granted that was
warrior against warrior warfare but the Kamikazis came from their
peace-loving Taoist religion. They had a cause to rally 'round. Us
peace-loving whatever-we-are types had a cause to rally 'round when we
carpet-bombed the crap outta German cities full of civilains during
WW2. Ditto Hiroshima, etc.

Forty-fifty years ago there wasn't a Muslim anywhere who would have
dreamed of attacking NYC. But after 55 years of completely bungling
our responsibility to sort out the Israeli-Palestinian conflict. The
Muslims now have their cause and their fringe nuts are conducting war
their way. In this case (vs. WW2)I don't think it would be
inappropriate to ask ourselves how much of it we've brought upon
ourselves.

The core problem is not in Bhagdad or Kandahar or Tripoli, it's in
Jerusalem.

> How can you trust in someone who you know has likeminded friends, neighbors and relatives

The answer to that lies in the lesson we should have learned from the
mass incarceration of west-coast Japanese-Americans a few years back.

Let's see. $895 (and "reserve not met") with a loafing production of 10
units each month comes to $8,950 gross.

I think that would pay the light bill.

>particular
>religion to prevail.

That's one interpretation, but here's another: That leader may have been
speaking to the fact that in much (most?) of the world, the average person has
no say whatever in politics. America is different.

Separation of church and state and full-scale religious freedom is really a
very new idea. And there are lots of contradictions right here. For example:

Despite our founding documents declaration of "all men are created equal". it
took 80+ years and a bloody war to eliminate slavery here. There were plenty of
Christian churches defending slavery as moral back then, too! It took even
longer for women to get the vote.

Or consider the Scopes monkey trial, the anti-contraceptive laws, "exclusive" clubs, and other religious-based embarrassments.

Look outside the USA, and it's even worse. "Protestants" and "Catholics" have been busy killing each other in Northern Ireland for decades. The apartheid laws of South Africa sure weren't put in place by Muslims. Lots of other examples.

> Of course many Muslims are peace loving people. It's the numerous minority
>which
>is vocal and violent that rules the day, however. And that is the element
>which
>will always predominate for they will always be willing to do whatever it
>takes to
>suppress the moderate element to that end.

Then how did Egypt and Turkey get moderate governments?

The real problems are not religious - they are political. The use of religion as a cover for political aggression isn't new. Goes back to the Crusades, at least.

>WHAT???

Ultralight must be getting his world history input from ARRL. :-)

The USA has been very well on the Israeli side of that "conflict"
since their independence in 1948. The USA has also tried to
use units of the US Army to keep Israel and Egypt from killing
one another in the Sinai...which was successful for the short
time that US forces were there.

>> The

The internment of US citizens of Japanese descent began SIXTY
years ago, not "a few years back." That ended 56 years ago, not
"a few years back."

Seems to be some kind of movement here to run out and kill
some ragheads for Jesus...?

Not only has ultralight and the mule departed far from
this newsgroup's general subject matter but they can't
even stay on the subject thread!

According to 97.1 (e) the last definition of the US ARS is:

"Continuation and extension of the amateur's unique ability
to enhance international goodwill."

It sounds to me like all of these self-styled amateur foreign
policy "experts" have fallen down on the job for the whole
last half century. They've had their licenses yet haven't done
much of that "unique goodwill" stuff. :-)

The only ones who can possibly comment to the regulators are
those already licensed...and failing to follow 97.1 (e).

Further, commentors must be "cleared" by the long-time 1x2s
to show cause in having the "right attitude" about ham raddio.

"Right attitude" is defined as doing exactly as they say one
should do, obeying their examples.

That way all can gain "practical experience" in US amateur
radio. :-)

Yes, yes, we brought it upon ourselves. We are not Islamic. We need to
check with Looey Farakhan and see what we need to do to become Islamic.

How could they do a good job at foreign policy if they're working 3 or 4
international stations per minute?

Yup but Bencher's paddles aren't expensive and Mitch hasn't quite milked
the Vibroplex cow to death yet. Even the Kent keys aren't too
expensive.

> In this particular case the thing is a collector's cult piece so all

The N2DAN paddles aren't yet old enough to have achieved cult status.
I've used one and I thought it was nice--not nice enough to peddle the
Vibroplex Iambic Deluxe but nice. My only recent bargain was at the
Finnish League's winter meeting a few years back. RA1AOM was there and
was selling his green marble based paddles with white teflon
fingerpieces. All the metal is titanium and stainless steel with a
built-in 5-pin DIN plug for connections. It looks gorgeous and works
smoothly. A mere $125.

Don't forget that Iran and Libya once had moderate governments. Egypt has a serious terrorist problem. Turkey a smaller one.

You write more like Leonardo with the passage of time. How does what I
recommend become an order?

You and Len seem to agree on a number of things. He is your principal
supporter here. You are his.

Let's see...You've petitioned. Nobody stopped you though a number
laughed at you. Have you found a way to force government to implement
your suggestions?
If you're looking for a way to gain practical experience in amateur
radio, may I suggest obtaining a license and spending some time on the

air?

Just so we're straight on this: You feel that Brian is being kept from
petitioning the USG because I suggested that he contact the USG? Is
that about it?

With the exception of porn and certain other much libralized
concepts, just what about the 10 commandements do you disagree
with. In fact, the tenets of western civilization and law are
pretty much based on the 10 commandments.

Dave, I've no idea what you're talking about.

Farnsworth spacing can be anything that you want it to be. It can be
anything I want it to be. It can be all things to all people. I'd never
whine about Farnsworth spacing, even if it were my nature.

Now Heil challenges our right to assemble?

Len and I agree on several issues, one of which is the apparent ownership of
the amateur radio service by knucklehead Extras.

Anyone the newsgroup trolls disagree with.

They will argue that it is an "illegal CBer", but they attach the label
quite freely to anyone who disagrees with their antisocial tactics within a
newsgroup.
LEGAL CBers and radio Amateurs have often been given the label "keyclown".

You will notice that the post makes accusations of pimping and drug use, and
is nothing more than a string of insults hurled at anyone who will take the
time to read it.
Some "antikeyclowns" have even been caught promoting illegal activity
themselves, which leads me to believe that their whole "pro-legal" stance
is fake, they just want to cause arguments on newsgroups. One of them has
made several attempts to spread the anger to a UK group, but has just been
blocked by most of the users.

Regards,

Peter.

I dunno. But it would not surprise me if it happened.

>I thought it was an SX-88.

Might be. I know for sure of a $6000 SX-88, but there could be a more expensive one.

While SX-88s are rare and prized, they are not one-of-a-kind. Nor were they the best of their era. Compared to the original 1954 purchase price of $595, $6000 for a mint one means an ROI of about 5% per year.

A $15,000 SX-88 would still be outdone by the $5,100 unbuilt AT-1.

> One of the
>prototype rcvrs from from the long-gone outfit which built ssb
>transmiters for awhile . . ?

That would be the CE 100-R. Only one exists, and the last I heard it was still in the hands of K8PSV.

The CE line (200-V, 100-R, 600L) would have given Collins some serious competition 40+ years ago, if the 100-R had reached the market. But CE was bought out (by Zenith?) and the whole ham gear business was simply dropped.

CE successfully developed and marketed no-tune HF amateur gear more than 45 years ago. With tubes. The 100-V, 200-V (100-watt-class transmitters) and 600-L (linear amplifier) all used a unique patented bandpass coupler in their output circuits rather than the then-ubiquitous pi-network.

Then there's the Cosmophone (first production-line all-amateur-HF-band SSB transceiver) and the EF Johnson Avenger transceiver (hybrid design, good performance and advanced features).

Which book?

Sometime back I read an interesting book called "What Went Wrong" (can't recall the author offhand). Good description of the rise of Islam vs. the decline/stagnation of European culture during the Middle Ages, then the reversal as the Renassaince/industrial revolution caused the West to leap ahead.

Quite interesting, though a bit dry in spots. I recommend it.

Much of what we now know of ancient history and basic science and math are the result of works preserved by Muslim scholars while European Christians were busy burning books because of their 'pagan' origins. Now the shoe is on the other foot.

I'll sell you my part real cheap. You can put it on Len's bridge across
East River.

Phil, that would be H. Roe Bartle, for whom Bartle Hall, the big convention center in downtown KC is named. And to you your question, obviously yes.

Well, they probably avoid the frequencies with repeaters in the area.
And the packet freqs too. But 6m is not that crowded and if a ham
appears on a freq they are using, they probably just jump to another
frequency. Or they use spread spectrum and we wouldn't know or much
care that they are there.

Neither were Pintos, Chevettes and Vegas. When I was operating at a
multi-multi one got knocked off the desk and I spent the following
half hour chasing the parts all over the floor and putting it back
together. Guy on the next shift did the same trick to another one.

> and Mitch hasn't quite milked

OK, I dunno, I don't much follow it. I've only ever owned two paddles.
The first was a hombrewed monster. Big brass base with two Putz-era
"mil-spec" straight keys mounted vertically back-to-back with
fingerpieces made from some G-10 circuit board stock. Used it for
35-40 years. I picked up the Kent for $129.95 about three years ago.

My only recent bargain was at the
> Finnish League's winter meeting a few years back. RA1AOM was there and

Well Brain since you have only been around for a
short while I'll fill you in. The "Keyclownbuster" is a
Ham named Doug Adair N8WWM. He was flooding
the newsgroup a year or so back on a daily basis with
the same foul language accusation and insults. He has
lost his AOL account, Concentric, UUnet now he's
working on another one.
Now what I find strange is, that Doug and a couple
of others are ham operators, now just because they are
hams doesn't mean that they are morally right, but they
wouldn't and couldn't talk like this on the ham bands, let
alone on the cb or for that fact in person.

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of September 15, 2002:

Novice - 36,819 (decrease of 12,510)
Tech - 243,865 (increase of 38,471)
Tech Plus - 75,976 (decrease of 53,281)
General - 138,922 (increase of 26,245)
Advanced - 84,695 (decrease of 15,087)
Extra - 102,719 (increase of 23,969)
Total - 682,996 (increase of 8,204)

73 de Jim, N2EY

That's probably why I've never owned a Bencher. I think they did modify
the later production so the things no longer fly apart. They're an
inexpensive "clone" of the W8FYO paddle (and those things go for BIG
bucks).

I didn't either when I laid down $85 for the Iambic Deluxe or $65 for
the Iambic Standard. The current Vibroplex prices bear little relation
to reality.

Hal Bubb (now a silent key) who lived up in Clinton, CT and who was a
retired W1AW chief op used a similar lash up with a homebrew keyer for
years.

Sure I bought one. The simple fact was that I couldn't resist it
either. The machining and polishing were too good to pass up.

He moved all he brought--maybe eight or ten of the things. K3FK bought
one as did Heikki OH2KMF. The price was something like 700 FMK in '96.
I had Val sign the bottom in felt marker. I'm sure he sells enough of

them to keep the dascha in St. Petersburg painted.

Amateur Radio Newsline™ Report 1309 – September 13th, 2002

Amateur Radio Newsline report number 1309 with a release date of Friday, September 13th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A world ham radio license inches closer while the N-T-I-A says no to 5 MHz for U-S hams. These stories are first on Amateur Radio Newsline report number 1309 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: WORLD HAM LICENSE A BIT CLOSER

A world wide universal ham radio license is a bit closer. Q-News Graham Kemp, VK4BB, reports on a meeting that has opened yet another door:

--
AUDIO REPORT ONLY: NO TEXT AVAILABLE. Audio is at http://www.arnewsline.org
--

It had been hoped that a world license would have been in place by the turn of last century two years ago. Now pundits are suggesting the end of 2009 or maybe 2010. (Q-News)

**
AMERICA AT WAR: HAM RADIO COMMEMORATES 911

Amateur radio was at ground zero in New York, Washington and Pennsylvania a year ago. And on the first anniversary of the terror attack that felled the World Trade Center, hams were there once again as the nation paused to reflect. The day before the 911 commemorative ceremonies were held the United States was put on a heightened state of alert for terrorist activity. Color orange the government calls it. And since 911 the words to live by all around the world have been – be vigilant.

Ed Note: From the President of the ARRL addressing the hams of the world on an Internet link-up, to hams in Florida operating air-mobile carrying American Flags to hams in NYC assisting at ceremonies, the Amateur Radio community involved itself in 9-11-2002. Much of it appeared to be planned at the last minute and only now are reports coming into our newsroom. Rather than rush together a report that would not do justice to all that was done, we plan to do in-depth coverage in next weeks newscast. (ARNewsline™ from listener reports)

**

THE CHALLANGE TO OUR BANDS: ARRL EXPECTED TO FILE ON THE 222 MHZ ISSUE

The American Radio Relay League is expected to file reply comments in opposition to the initial comments of Data Commlink Incorporated. This, in FCC W T Docket 02-224.

As reported last week, W T Docket 02-224 merely sought to gather comments on requests for waivers on spectrum management services in the 220 to 222 MHz band. But Data Commlink decided to use it as an opportunity to strongly suggest that the FCC remove 222 to 225 MHz from use by radio amateurs and transfer it over to commercial service. Primarily for use by the electric power cooperatives that it represents.

Word is that the League will vigorously defend the 222 to 225 MHz spectrum. Keep an eye on the ARRL website news pages at www.arrl.org for the latest. (ARNewsline™)

**

THE SPECTRUM FIGHT: NTIA HEAVES POTENTIAL MONKEY WRENCH INTO 5-MHZ BAND PROPOSAL

The National Telecommunications and Information Administration -- the N-T-I-A -- has recommended that the FCC not grant an ARRL petition for a domestic-only secondary Amateur Radio allocation at 5 MHz. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--
The N-T-I-A regulates radio spectrum allocated to the federal government. According to the ARRL Letter, the last-minute negative recommendation from that agency followed hundreds of largely favorable comments and reply comments from all sorts of organizations and from many individuals.

But in an August 21st letter, the N-T-I-A's Fredrick R. Wentland wrote that federal agencies are making extensive use of High Frequencies for emergency services. This, Wentland says, includes communications support for the Department of Defense, the Coast Guard and Department of Justice.

Wentland, , who is the agency’s Acting Associate Administrator for Spectrum Management went on to say that the N-T-I-A believes the Commission's current proposal does not adequately provide for protection from harmful interference to these critical government operations primary in the band. He says that without a more complete understanding of the interference potential to federal operations, the N-T-I-A believes the secondary amateur allocation would be "premature.”

But Wentland did offer up a carrot so as to speak. He said that N-T-I-A was willing to work with federal agencies, the FCC and the amateur community to determine whether some future accommodation for amateurs at 5 MHz would be possible. However that could include limitations on power or emission types, a reduction in the size of the proposed band, the use of discrete frequencies or geographical restrictions.

From the South-East Bureau, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Wentland's letter arrived at the FCC beyond the cut-off date for reply comments for ET Docket 02-98. None-the-less, the N-T-I-A is a powerful agency and when it speaks, all other agencies tend to listen and to obey. (ARRL)

RADIOSPORTS: US TEAM RETURNS FROM ARDF CHAMPIONSHIPS

This year's team of eleven American on-foot foxhunting enthusiasts were up against more than 300 competitors from 28 other nations, and they came within two minutes of bringing home our first medal. Nadia Mayeva from Mooresville, North Carolina took fourth place in her age category by finding all her required transmitters in 109:02. She was edged out by a YL from China, who won the category bronze medal in 107:20.

Gyuri Nagi KF6YKN of Maspeth, New York placed fifth out of 50 in the hotly-contested M40 category. Tthat's males ages 40 through 49. He and his family put on a one-week training camp for members of Team USA near his native hometown in Hungary during the week before the championships.

This was USA's third trip to the World Championships, which are held in even-numbered years at locations chosen by the International Amateur Radio Union. Team members ranged in age from 33 to 60. Co-captains were Dick Arnett WB4SUV of Erlanger, Kentucky and Bob Frey WA6EZV of Cincinnati, Ohio. Karla Leach KC7BLA of Bozeman, Montana represented USA and IARU Region 2 on the International Jury overseeing the competitions. Her assignment was Course Marshal at one of the foxes.

Complete results for all ARDF Team USA members plus lots more information about the sport are now at Team USA's official Web site: www.homingin.com That's homingin -- one word -- homingin.com

From sunny southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline. (K0OV, ARNewsline™)

HAM RADIO IN SPACE: BASS OFFICIALLY OFF OCTOBER ISS FLIGHT

It’s now official. The Russian Space Agency has notified NASA that 'N Sync singer Lance Bass, KG4UYY, won't fly to the international space station next month because his backers were unable to raise the $20 million fare.

With backing from corporate sponsors that included Radio Shack and MTV, Bass had hoped to blast off from the Bikenour Cosmodrome in Kazakhstan on October 28th. But the producer of a seven part documentary on Bass experience in space failed to raise the full amount of money needed. The result is that the pop star was grounded by the Russians and a cargo container substituted on the flight in his place.

Had he flown Bass who is age 23 would have been the youngest person and youngest ham radio operator ever in space. He also would have been the third paying space tourist to visit the I-S-S. We'll have more ham radio space related news later in this weeks newscast. (ARNewsline™ from published reports)

**

ENFORCEMENT: DONT TAKE 10 ON THE ROAD AGAIN

The FCC has told Cheetah Transportation Company to keep its trucking operation off of the 10 meter Amateur band. In a letter to the Monroesville North Carolina company the FCC says a driver for a vehicle licensed to Cheetah was operating unlicensed radio transmitting equipment on 28.085 MHz. This, while driving on Interstate 77 in South Carolina last June 5th.

In its letter to the company the FCC tells Cheetah Transportation that this operation will subject the person operating the radio to fine or imprisonment if the violation continues. Fines normally range from $7500 to $10,000. (FCC)

**

ENFORCEMENT: FCC SAYS NYC REPEATER PROBLEM IS SOLVED

The FCC says that a repeater problem in the New York City area has been put to rest. This as the agency places primary responsibility for solving interference on the shoulders of the operator of an uncoordinated repeater. The agency's Daryl Duckwoth, NNZ0W, explains:

--
Duckworth: "We closed the case involving a repeater operated by Ramon Floriman, KB2PRV, of Elmhurst New York. Florimam was unable to show coordination and the Enforcement Bureau pointed out that he would be primerilly responsible for resolving any interfertence to a coordinated repeater; that a Control Operator must be present during the operation of the station and that the repeater is to be used only by licensed operators."
--

The FCC hopes that closes the book on this one. (RAIN, FCC)

**

HAM RADIO EDUCATION: THE BIG PROJECT WORKS

The ARRL Education and Technology Initiative, better known as "The Big Project," has been getting big donations. More important, its getting big results.

The Big Project was created by ARRL President Jim Haynie, W5JBP. League Vice President Kay Cragie, WT3P, made it all work. Its primary objective is the spreading of Amateur Radio into the nation's schools.

The Big Project support fund has already received $198,000 in donations from approximately 3,400 individual ARRL members. The average donation has been about $50. (ARRL Great Lakes Div. Release)

**

HAM RADIO TRAINING: HAMTESTONLINE.COM

J. Cunningham and Associates has launched a new subscription website for aspiring radio amateurs and those wanting to upgrade. Called www.hamtestonline.com, the company says that the site is designed to help both new and experienced ham radio enthusiasts prepare for U.S. amateur radio written exams.
According to a press release, HamTestOnline operates entirely online. There is no software to download or install. One click records your answer, provides feedback, and presents the next question. The Website includes all questions from the latest Technician, General, and Amateur Extra question pools.
J. Cunningham & Assoc. is a small software development and consulting firm located on the outskirts of Boston, Massachusetts. They can be contacted by e-mail to webmaster @hamtestonline.com. (Hamtestonline)

**

BROADCAST COMMUNICATIONS TRAINING: SBE OFFERS CERTIFICATION

The Society of Broadcast Engineers – the SBE – is offering a program of certification for broadcast engineers. Certificates range from the entry-level Broadcast Technologist to the 20-plus-years-of-experience-needed Professional Broadcast Engineer. The program includes certification for Audio and Video Engineers. There is also a Broadcast Network Technologist which does not include any RF related questions. For more information about SBE Certification contact the SBE chapter nearest to you. (SBE PDX)

**

CELEBRATIONS: SCADS AT YEAR 29

The 29th Birthday Meeting of the Southern California Area D-X’ers is slated for September 21st at 12 noon. The venue is the Community Room of the F&M Bank in suburban city of Seal Beach. The meeting is open to the general public. Contact Bill Fisher by e-mail to billfishernow@netzero.net for more information on this special gathering. (SCADS)

**

SPECIAL EVENT STATIONS: GB2RAF ON THE AIR

And the permanent special event station GB2RAF located at the UK Royal Air Force Air Defense Radar Museum was to be operational on Saturday the 14th of September between 09:00 and 14:00 UTC in the 80 or 40 meter bands. QSL will be sent to all amateurs who make contact and request one. (GB2RS)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EDUCATION: HOME SCHOOLING HAD HAM RADIO

In California where Amateur Radio Newsline is located, some 150,000 youngsters each year are getting their primary education at home. They are home schoolers. Their teachers are primarily their parents and similar percentages hold for most other states. And there's a growing question: Has ham radio become a part of the home schooling movement? Bill Pasternak, WA6ITF, has more:

--
Rumors abound that ham radio has become an important addition to the nations home schooling movement but only those involved in home schooling can really tell us -- and you -- what's happening. To try to find out, Amateur Radio Newsline is going to run one of our "mini surveys."

To take part is simple. First you need to be a ham radio operator who is home schooling his or her children or a ham radio kid who is being home schooled. If you fit either category, take a moment to send us a note explaining how you are using ham radio in your home schooling curriculum and why you chose it.

Please send your electronic response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We will collect the data for the next three weeks and then post some of it to our website. If we get enough input we may even try to write an article on ham radio and home schooling for one of the mainline Amateur Radio magazines -- if they are interested. Lets face it: This could make for a rather interesting project.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF
--

Again, if you are a home schooler who uses ham radio in the teaching process please send your e-mail response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We thank you for taking part in this survey.

**

HAM RADIO IN SPACE: U-O-SAT 11 HEARD AGAIN

In the world of ham radio in space, word that U-O-SAT 11's V-H-F beacon has been heard once again. Paul Roeder, KK5ET in Houston reports via the AMSAT News Service that he copied the 2 Meter downlink on 145.826 MHz FM. This is a 1200-baud A-F-S-K signal and he heard it between 21:25 and 21:38 UTC pass on September 4th. Paul says that the signal was a strong S 3 to S 5. (ANS)

**

HAM RADIO IN SPACE: JAPAN TO DEVELOP SPACE SHUTTLE

Japan's space agency says that it plans to test an unmanned landing and take-off system next month. That nations National Space Development Agency, or NASDA, that it hopes will one day be used in a reusable shuttle or other spacecraft.

The five-part tests are to begin next month on Christmas Island in the Micronesian archipelago of Kiribati. They will be followed by a second set of tests sometime next year. (K6DUE, NASDA)

**

ON THE AIR: THE VHF/UHF FALL SPRINTS

The 2002 Fall Sprints, sponsored by the Southeastern VHF Society, are about to start up. According to Greg Robinson, KB4NVD , the Sprints are a fast paced block of time where all the contest activity is compressed into a short period. That says Robinson makes them a great chance to get on and work lots of stations on your favorite VHF and higher bands.

Robinson says that the bottom four bands all have their own separate evenings for the contest. The microwave bands from 902 MHz and up are grouped together on a weekend morning.

More information about the days of the Sprints , the rules and a list of who is handling the logs for each band will be found on the SVHFS webpage. Its in cyberspace at www.svhfs.org. (VHF Reflector)

**

DX

In D-X, word that G3PYB, G8ACE and G8BKE believe they have re-claimed the United Kingdom distance record for 76 gigahertz. Yes that’s 76 gigahertz -- as in way up there in frequency.

On Sunday September 1st, the trio made contact on 75,976.2MHz over a distance of 79.6 kilometres between Ventnor on the Isle of Wight and Highclere, near Newbury in Berkshire England. Further details are on the world wide web and there's a link from the RSGB site at www.rsgb.org. (RSGB)

And nearly at the other end of the spectrum, on August 30th at 05:50 UTC stations G3MLO, and MW0AQD, were in QSO and taking part in the British 'Fivemegs Experiment' on 5398.5kHz at 05:50 UTC. Afterwards, G3MLO received a reception report from ZL2JR, saying that their signals had been copied in New Zealand. MW0AQD was received at '4 and 4' while G3MLO was copied at '5 and 4'.

While the 'Fivemegs Experiment' is intended to investigate propagation within the U-K, the contact was made shortly after sunrise in Britain and around sunset in New Zealand. This is the time that long-distance 'greyline' propagation can be expected to occur (RSGB)

**

THAT FINAL ITEM: A NEW KIND OF BATTERY

And finally this week, a new battery about to be marketed for home video enthusiasts holds a promise in expanding ham radio emergency communications. It is called Instant Power and Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more in our technology report:

--
One of the most frustrating experiences for a photographer or a ham radio operator is to be in an acute situation that requires equipment work properly and have the batteries powering the equipment go flat. For the photographer it usually means a lost photo opportunity. To the ham radio operator assigned to provide communications during an emergency it could be a life and death situation.

But power reliability could soon increase dramatically. Steve Crow, K4CPX, passes along word that the nations largest photographic retailer, Ritz Camera has announced plans to begin selling a new battery that can keep a camcorder or digital camera shooting away for half a day.

The new source of portable power is Electric Fuel Corp.’s Instant Power disposable batteries. Based upon Electric Fuel's zinc-air technology platform, the Instant Power camcorder battery connects to the camcorder through its DC jack and offers the user up to 10-hours of running time. Another model designed for digital still cameras offers upward of 12 hours of continuous operation time. As with the camcorder battery, the digital camera battery pack comes with a built-in belt clip and 3-foot cord. Both batteries have a five year shelf life in the original sealed aluminum pouch and come complete with a 3-foot cord and an integral belt clip.

While not directly designed for ham radio needs and not a renewable source, the new battery could augment the needs of ham radio operators in emergency communications situations. And here’s where Amateur Radio ingenuity comes in. If models are available that can directly or through some home built regulator adapter be made to power a 5 watt hand-held radio, an Amateur working an emergency situation would have hours of power wll beyond that of his radios normal battery. And depending on how much he transmits, an Electric Fuel battery might run his H-T for several days before requiring replacement. This also gives the possibility of extended operations for low power Field Day stations, QRP treks and similar one-time operations. Best of all it is a date it, put it on the shelf and forget it power source, standing by for the next five years in case it is needed.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

Electric Fuel also manufacturers a smaller version of this battery technology for cellular phones and P-D-A’s. You can find out more about this new power source and the technology behind it is on the web at www.electric-fuel.com. (K4CPX)

Dan, thanks for the tip. But my code is almost twice as fast as required.
I'll wait until I retire and have plenty of time to work on increasing my
code speed to 4 times (or even more) than required.

Thus no need to use Farnsworth in examining - it is for learning. Morse is
the desired outcome. The Morse exam measures that. It is the final proof
you are looking for.

> > > > How is the "method" distinguished from the exam?

>WW2.

February 15, 1945. Dresden. Firestorm created by incendiaries destroyed the city and most of the inhabitants, even though they were in air raid shelters that were safe for "conventional" attacks. Kurt Vonnegut wrote a book about it - "Slaughterhouse Five". He should know - he was there, as a POW.

>Ditto Hiroshima, etc.

The most destructive bombing of Japan were the Tokyo fire raids. Worse than Dresden.

>Forty-fifty years ago there wasn't a Muslim anywhere who would have
>dreamed of attacking NYC. But after 55 years of completely bungling

>> who hate your guts plenty enough to kill you just because you're not
>Islamic, or because
>> you're an American. Even though America is home to many other Islamics?
>
>The answer to that lies in the lesson we should have learned from the

>mass incarceration of west-coast Japanese-Americans a few years back.

Fun facts:

- Throughout the entire WW2 period, there was not a single documented case of anti-USA sabotage or espionage committed by a Japanese-American. Not one. The same cannot be said of German-Americans.

- Although Japanese-Americans were interned in camps on the west coast, no such internment was carried out in Hawaii - even though it was Hawaii that was attacked on Dec. 7, and which was threatened early in the war.

Yep. The Crusades were an extension of that. And another manifestation
of excess by religious fundamentalist zealots performing as True
Believers.

> Now the shoe is on the
> other foot.
>

Sure is. Do we want to suffer mush of the same fate as mid easterners
during the Crusades? For that is exactly what much of the Muslim world
wishes for us.

You can ignore Kim. She has no confidence in books. Just touchy-feely.

Da Judge ain't looking for anything on morsemanship for anyone
but hisself. Since he made it to 20 WPM on a test, he could
care squat about anyone else.

The general motivation behind the PCTA stand is that everyone
has to do as they did ("measure up to their standards") or be
thought of as "inferior."

Ahem. Try getting history straight. The Middle East was
largely unaffected by the "Crusades." The "Crusaders" were
invading the Middle East and didn't accomplish much except
some live sword-play drills and sea-sicknees (during transit).

Pope Urban II started the hue and cry for the first crusade in
1095. Between then and 1291 there were 10 "crusades,"
resulting in four temporary Frankish states in the Levant.
Those were overthrown. Along the way those "crusades"
massacred or expelled Jews in the Rhineland (1096),
England (1290), and France (1306). As a byproduct of the
"crusades," see the Albigensian Crusade in France where
warfare was waged internally against Christian heretics in
1229. Not a pretty picture of Christianity's noble goals.

After the "crusades" trade in Middle Eastern luxuries
expanded courtesy of the Venetian navy.

> You can ignore Kim. She has no confidence in books. Just touchy-feely.

As for "books," Dickie has some odd notions. He doesn't have
proper history books to show the "crusades" as the bigoted
debacle and waste it was for Christian nations' crusaders.

He thinks he "knows all about earthquakes" by reading some
book on the New Madrid Fault in his home state. He said so
after another mentioned the devastating Northridge Earthquake
of 1994. "He knew how it felt" even after never having felt one.

Somehow the idea that "religion" is some kind of issue in the latest
NPRM of the FCC for several proposed amateur bands in the USA
is beyond me. Maybe the papal college of cardinals in Newington
can supply some ecumenical thought to this? :-)

While not treason per se, Mrs. I. Toguri D'Aquino was convicted of treason, given 10 years in prison on October 7, 1949. She was better known to Pacific Theater G.I.s as "Tokyo Rose," the darling of Japanese SW BC propaganda programs.

Tokyo Rose was a Japanese-American.

Sure looks real enough for me! I wouldn't be surprised if the reserve was $1,500 or more! However, something like that is worth exactly what someone else is willing to pay for it. Most people, and definitly most hams, can think of something better to do with that kind of money!

I toyed with the idea of ordering a Mercury Paddle years ago, when the going price was around $400. In my typically frugal manner, I talked myself out of it. My mistake! However, the reason for purchasing one wouldn't be it's investment potential. It's simply the best CW paddle available -- period! You want an investment, figure out where they're going to build another Wal*Mart five years from now, and buy up the land!

N2EY wrote:

> Not a new thing or a strictly Muslim thing by any means. Ask Galileo.
>

This seems a key area of concern- the Islamic fundamentalists are
straiht from the Middle Ages or even earlier, in their level of
education, philosophy and outlook on world affairs. Nothing can ever
trump their religious views, which are mostly developed upon illiterate
individuals -the rate of illiteracy in that part of the world is
startling- by the haranguing of radical Mullahs. For them nothing
stands in the way of Allah's will, even their own deaths, to a man.
Except, of course, the Mullahs. They always seem to survive, whatever
else happens. As you know, Ayatolla Khomeni died of old age while many
of his followers did not.
But there are so *many* of them and they are so intractible. Seems like
a case of fighting fire with fire, only more of it, to win. It can
readily be seen as THE most serious serious threat to Western
civilization. Who knows the extent of their intentions on 9/11/01? No
one here did. If not for fate, a bit of incompetence and a few valiand
souls aboard Flight 93 there would have almost certainly have been
evenworse carnage, and we still don't know how many others got "cold
feet" or decided now was not the time. So when? What next? Forgive and
forget? Hiroshima and Dresden didn't occur because we're mean and
vicious. It occurred because our enemies had proven they would kill as
many of us as they had to without hesitation-and had. Our leaders
decided, very much in our best interests, that the way to prevent that
was to win the war at whatever cost to the enemy that proved necessary.
The current situation may eventually move to that sort of arena, if
there does not occur the noted "debate within Islam" that sets it on a
course much different than it presently sails on.

> Those on the far right want to over-control what individuals do and let govt.
> and businesses run wild. Those on the far left want to over-control what govt.

> to strike a balance.

It has always irked me to have to choose between two parties which have
been so far removed from that which is our center, where the best
interests of most of us lie. No third part has a ghost of a chance, so
one is left with either choosing between two of which neither fits, or
wasting the vote. Ugly.

Granted, zealots are

I worked with a fellow who had been a Navy chief radio op on a aircraft carrier in WW2. He told of a kamikazi who almost got his ship...would have, except for the Marine gunner who swung his machine gun around and shot at the plane accros the flight deck. Finally hit and exploded it so close to home the propeller fell on the flight deck. Pucker time!

If you can parallel the Islamic situation with the Japanese kamikazis, then the suicide bombers/hijackers/etc would be only a small portion of the populace that's "out to get us". They have PLENTY of support among the non-suicidal, a large percentage of whom hail them as heros and martyrs, just like the Japanese did.

I dunno, we've always been the "infidels" to them. All it took was a kook like Bin Laden to move it along.

But after 55 years of completely bungling
> >our responsibility to sort out the Israeli-Palestinian conflict.

Brian, you must read a different account of the news than I. Every president in that time frame has made a supreme effort to bring the two sides together. When the arabs say the only thing they will accept is the elimination of Isreal, that pretty sews up the situation. Unless that's what one is willing to accept. YOu can't deal with the intractible.

The

I couldn't disagree more. We've handed out MANY billions of money we still owe trying to keep those peasants fed and clothed, and they hate us even more for it. Take a close look next time you see bags of food being handed out over there-anywhere over there. They'll ALL be marked "USA". It just pisses 'em off while they chow down. Turnes out we've sustained those who ARE killing us. And we owe trillions of bucks still partly because of it.

> It's also appropriate to ask what changes Americans are willing to make in

>

Saw a snippet on the tube just this evening about buying your gasoline from retailers who don't buy Arab oil. Turns out about half our oil/gas companies do not. Didn't catch which ones do not, but I'm going to find out and act accordingly.

Lacking some massive subversive movement by a large number of Muslims I cant' imagine such a thing ever happening in the instant case. But that deb ate inside Islam better happen, and start showing some positive results. It isn't enough to say "we're here because we wanted to be

here". That doesn't preclude subversive intent. Best make some
affirmitive moves, such as turning in the hidden terrorists among them.
I see that appears to have happened today in the Buffalo NY area. Good
start, keep it up. Orove that Islam is truly a peaceful religion, not
just a cover for more subversion, and all will eventually be well.

I spent quite a bit of time in the military working with a couple guys
of Japanese descent. Great guys, true Americans. WW2 was the result of
culteral problems brought on by an ancient and enigmatic, ethnocentric,
radical culture. Much like radical Islam.

Dick, you'll have to reconsider.

I was the one who said that I needed my commanders permission to operate.

Dave and Steve told me that a commander cannot authorize anything.

I was the one who found and submitted the ARRL information on operating in
Somalia.

Phil said I would have to get a license from a non-existant government.
International Law and all that.

And the Greatest DXer in the World admitted he knew nothing about it, but he
knew enough to say I was wrong. He thought.

Lots of well-meaning (Phil) and not so well-meaning (Dave, et al) people
have weighed in, and my original information stands.

Brian

You should have seen the spin the Catholic grammar schools
in the 1960's put on the crusades....

>
>You should have seen the spin the Catholic grammar schools
>in the 1960's put on the crusades....

More like in the 1950s, having known (well enough) a young
Catholic woman in the 1960s...who was given her equivalent
"DD-214" after failing as a novitiate.

All that chat-room stuff is irrelevant, isn't it? The subject is the
proposed US amateur radio band at 60 meters and a comment
from an NTIA person not agreeing that the 60 meter band, as
proposed, should be granted to US radio amateurs..

The infamous "crusades" ended about 1453 when the Islamic
forces took back the last of the temporary Levant states. That
was roughly 547 years before the NPRM and 443 years before
the first demonstration of radio as a communications medium.

Is there something "religious" or "Christian" about being granted
a US amateur radio band by the FCC?!? Please, someone,
educate some of us readers who don't have an amateur radio
license...and therefore "have no practical experience in the
ecclesiastical history of amateur radio." :-)

I have to love some of the "world history" remarks in here...as if
all these PCTAs got their "knowledge" from the audio-visual
output of MGM, Warner Brothers, and Paramount Studios. :-)

Bullshit, cite one "rant" I've ever posted in .antennas. There are no
rants in .antennas, it's a quite civilized technical discussion forum.
Also note that The Putz with his self-proclaimed vast knowledge of all
things electronics has yet to ever share that "knowledge" with the
rest of us in .antennas. He has a ONE agenda wrt to ham radio: Bash
those who have a demonstrated capability in the use of CW and support
the continuation of the code tests. He reaps as he sows.

> cranks that just don't mix. I wonder what it could be?

Not getting it is no surprise at all, that's your signature
chracteristic. At least as you represent yourself in this NG. In case
it's too deep for you to fathom the "difference" is that the Putz
doesn't know how to disagree civilly when it comes to any post which
advocates the continuation of the code tests PERIOD.

>

Nope, I'm saying that I am only responsible for making sure that MY
station, no matter where in the world I happen to be, is on a frequency
where it is authorized to be. French stations are responsible for their
own operations. I've posted that right here for all to see quite a

number of times. Maybe you missed it.

Got your special glasses on?

It doesn't work that way, Brian. I'm not against the use of the
Farnsworth method in testing. You and Len have a problem with it. You
or Len need to make a case, directed toward those who are empowered to
make a decision.

> > > > > > It isn't a code at all.

Naw, I don't get mad at "newbies". You aren't a newbie. You're a guy
who has quite a bit of time in amateur radio and who still can't figure
things out.
Len isn't a newbie. He won't be a newbie until he gets a license.

> > > Since you and the ARRL use the term "Farnsworth" interchangeably with

> Then what did you mean?

It is tiresome pointing out things which I did not write. I did not,
for example, write that the code exam is not mandatory for an HF
license.

It would seem that it is indeed clear to the FCC. Without your input,
they are apt to go with the status quo. Hell, even with your input,
they're likely to go with the status quo.

> > > > > Unless the FCC or the UN prosecutes me, my claim stands.

I have no interest in contacting the French authorities. I have no
interest in contacting the FCC. You have problems with a couple of
issues. You've taken no steps to contact those who could do something
about either issue. Maybe you could liven things up by contacting the
FCC regarding the 6m operation of French amateurs and you could protest
the use of the Farnsworth method to the French PTT. You could get as
much done by doing this as you are likely to accomplish by braying about
things here.

It sure does--as a two dimensional cardboard sham. You have no proof of permission whatever. There is, however, proof that other military members did have written permission. Tell us again about you being a DXer.

This one has been addressed on numerous occasions--in fact, only
recently I addressed this very same sort of statement. You can't do as
```

I did. It is completely impossible in today's testing environment. If
you feel inferior, it is because you're a rude boor who haunts an
amateur radio newsgroup as a non-participant in amateur radio.

This was addressed point-by-point in reply to one of your recent windy
posts.
There has been no response by you except for your false statement here
about it being MY idea. Did you ever find that post where I claimed the
idea to be mine?

Putzy Poo has no idea what he's talking about here either. For some reason the Arab nations still remember the Crusades in a very negative way.

What a freakin' idiot.

No..not much impact...all it did was give us the foundation upon which all the PRESENT middle-eastern conflict is based upon.

Nine hundred-plus years of tit-for-tat exchanges of revenge and counter revenge that have created a now-inbred hatred that the present purveyors are fighting and can't remember what started it all.

>Not a pretty picture of Christianity's noble goals.

There's not a religion in the world that has not had some or all of it's adherants conduct some atrocity all in the name of "god" or "freedom" as interpreted by it's clerics or other purveyors. Usually upon "believers" of other faiths, but occassionally upon thier very own.

Religion has been and remains today the number one cause of major warfare in the world since the beginning of recorded history. Praise the Lord and pass the ammunition.

>After the "crusades" trade in Middle Eastern luxuries
> expanded courtesy of the Venetian navy.

No doubt modelled upon McHale's Navy.

>Somehow the idea that "religion" is some kind of issue in the latest
>NPRM of the FCC for several proposed amateur bands in the USA
>is beyond me.

What's "beyond me" is your numerous chiding's of others vis-a-vis discussion of non-radio related topics, only to make grossly off-topic postings such as this one.

Brian:

When the code test speed requirement was 4X faster than it is today, it only took me a few months to get "up to speed." I was also working 12-hr. days, 6 days a week, taking college classes part-time, and pursuing an active social life at the time. What's the problem? Am I better than you, or what? Oh, I forgot. You had to wait before the code testing requirements were REDUCED by 75% in order to even give it a try. Sorry I axed.

>of those days or what??

The original thread title concerned the proposed US amateur radio band at 60 meters. That's good for amateur radio policy discussions...in most other amateur chat-room venues.

In a sub-thread brought on by noted PCTAs Miccolis, Kelly, and Carroll about 13 Sep 02, this suddenly becomes an "Islamic-Christian" debate concerning the "crusades." Remarkable. The "crusades" encompassed four centuries of religious warfare both internal (Christian sect against Christian sect) and external (armed Europeans going into the Levant states or what is now known as the extreme eastern end of the Med, Lebanon to the Sinai). Such has no real relation to the subject since it happened OVER FOUR CENTURIES BEFORE THE FIRST DEMO OF RADIO AS A COMMUNICATIONS MEDIUM.

According to "historians" Carroll and Kelly, the present religious antipathy of Islam versus Christianity is "all due to the crusades" and some "memory" of it among some in Islamic states. A more likely "memory" is the European colonial rule in the Middle East between the middle 1800s and middle 1900s. In more recent history the Europeans lost that colonial rule just as they were

defeated in the earlier "crusades" period centuries before. As an example, Israel got its independence in 1948...and also started half of the four major wars of the next three decades between Arab nations and Israel. That's recorded history of the recent past. It was in the newspapers.

That has absolutely nothing at all to do with radio or electronics policy or technology concerning amateur radio or even the much larger world of radio communications. Just the same, a group of radio hobbyists in a predominently white male American grouping wish to sound erudite and "knowledgeable" by somehow shifting the discussion to the "fault of it all" as due to Islam and their alleged "memory" of over four centuries in the past! Remarkable.

If one doesn't agree with these "experts" (all PCTAs), then it is a case of rampant name-calling word-warfare against their "learned opinions" which are not learned, just ignorantly opinionated, definitely to the side of European Christianity.

For years the US amateur radio regulations have contained the definition of radio amateurs in the words of Part 97.1 (e): "Continuation and expansion of the amateur's unique ability to enhance international goodwill."

Enhancing international goodwill?!? How? A quick glance at any Almanac listing of the latter half of the previous century will show wars and general bad will between countries who have had amateur radio activity authorized by their administrations. So...how has all that "unique international goodwill" been of benefit to humankind in the last half century?

Irrelevant to this newsgroup. The "expert historians" (all PCTAs) in here merely want to FIGHT, to assert their virtual testosterone-laden mental machismo based on pure emotion, not facts of knowledge of the recent past. It is a disgusting little display of "practical amateur radio experience" that is supposed to be some kind of ham hallmark.

The proposed 60 meter US amateur band does not involve any upcoming WRC discussions or preliminary views of the US administration at WRC-03. It involves only a small portion of EM spectrum occupancy. That spectrum slice has known radio characteristics, known for over a half century, contains non-amateur US radio users most of whom being subject to NTIA regulation-organization. That subject could be argued in and of itself. It is not. The arguments other than Miccolis' "devils advocate" remarks involve petty little bigot statements concerning "Islamic memory." Ridiculous.

The NTIA commentary to the FCC that sparked this thread concerns other proposed US amateur radio bands. Those have not been mentioned. Why? Simple...it does not involve

any fight promise. It does not involve familiar spectrum territory. PCTAs are seemingly as non-knowledgeable of anything outside of HF as they are about geopolitical-religious history of the rest of the world. By demonstration. In here.

The pity of this little episode is that it is viewable by anyone with access. Radio regulatory agency people viewing all of this no doubt do a lot of either laughing or negative head-shaking. It does not, definitely not promote any goodwill between the militant fight-prone PCTAs and anyone else. If this is the hallmark of excellence resulting from "practical experience in amateur radio," then it is less than the equally-bad, emotionally-driven commentary of freebanders.

I wouldn't think so. But the point is that most of the world got over
such nonsense by the time we had kicked all that butt at the end of WW2.
Even the Marxists have almost all crashed and burned, or at least
adopted some modern Capitalist life view, sorta slid into a modern era
of some sort. But not the poor A-rabs. They're still stuck in Mohammad's
third century.

1211. The No Code Hams Issue- Interesting Perspective

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-17 21:40:42 UTC

From "The Case of the Codeless Hams":

"The biggest battle in many a decade is shaping up on the
ham scene these days....And it concerns what might be called
"codeless hams"... For years there have been grumblings
about these code requirements. Argument is that they are outmoded,
oppressive, unrealistic and constitute an unfair barrier to ....
potential ham operators.... The situation has intensified
in the past few years, however...For these reasons, a new type of
radio amateur would seem entirely within the scheme of things..."

Published in Electronics Illustrated, March 1965.

The more things change.... ;-)

A few years ago the pope admitted that the crusades were a bad idea.
Along with a long list of other inquisions and whatnot done centuries
and decades ago. Maybe this can be a start to end all this jihad crap...

And if Israel would not have "started" those, there would have been no Israel left in the face of the Arab threats. And probably no Phil Kane left to comment on it 35 years later.

> That has absolutely nothing at all to do with radio or electronics
> policy or technology concerning amateur radio or even the much

I am one link between the above and radio communications. Part of my work with the Israeli Communications Ministry during the '67 fracas was radio broadcast interception of "the neighbors" and their propqganda broadcasts. I peronally heard the "we will push the Jews into the sea" in bad English and even worse Hebrew from Rasdio Cairo. My counterparts who were handling the Arabic and French broadcasts say that the grammar was better but the theme was the same.

The Arabs were not confusing the Jewish Israelis with the Christian Europeans of the Crusades. This has nothing to do with Moslems vs. Jews, just Arabs vs. Israelis. Strictly political turf war, not religious.

Bow back to NTIA Turf Defending......

Four larger wars later there is still a Phil Kane commenting in
favor of Israel...and the government of Israel is busy fighting in
smaller scale against Palestinians. Killing is continuing on
both sides. Congratulations on passing the half-century mark
in authorized, organized murder on all sides there.

What has been proved since 1948? Killing is "okay" if done by
one government but "bad" if done by another one?

I've heard those from the Middle East personally say exactly
the same about Israelis (Egyptian, Lebanese, Persian or, as
you Armericans say, Iranian). All the sides think they are
right.

US radio amateurs do not yet have a 60 meter band. Should
they get one just because they are "right" and the (evil) NTIA
are somehow "trying to drive them into the sea" in some
over-exaggerated analogy to half-century-plus fighting in the
eastern Mediterranean nation-states?

> The Arabs were not confusing the Jewish Israelis with the Christian
> Europeans of the Crusades. This has nothing to do with Moslems vs.
> Jews, just Arabs vs. Israelis. Strictly political turf war, not
> religious.

What seems to be going on in this newsgroup is a few very militant
"palestinians" (it rhymes with pro-code-testians) tossing their bangers
about in mental machismo posturing over some imagined turf war
over turf they don't have.

At least one of them seems ready to run out and kill some ragheads
for Jesus...because he can't tell the difference between a true

believer in Islam from some dysfunctional kill-happy minority sect members who did accomplish the unthinkable.

Another one is so wrapped up in his own belief system of the Ancient Radiotelegraphy Service that he wants to fight everybody who doesn't think like he does. A true fedayin willing (in words) to blast anyone against keeping standards and practices of his long-ago youth.

> Bow back to NTIA Turf Defending......

No one is "defending NTIA turf." US government-military users are already in the 5 MHz region of HF. Now. [not "bow"]

US radio amateurs have to show cause for an allocation at or near the 60m band region. "Showing cause" isn't done by tossing bad things at agencies that already have that turf. "Showing cause" isn't done by proclaiming some divinly-(self)-given righteousness and wrapping oneself in tired cliches` of vague political goodness. "Showing cause" isn't done by pretending to be radio minutemen defending the nation against terrorists while sitting in their shacks working contest points and having pipe dreams of glory saving some mythical Titanic. "Showing cause" isn't done by damning every single non-amateur who doesn't buy into their mythical beliefs of greatness and tenure as amateurs.

Amateurs could truly show cause by behaving like rational adults and presenting arguments for their side in positive ways. Amateur radio has largely been an avocational radio recreation activity for a half century. There is nothing wrong with recreation for recreation's sake. Our national park system is enormous and exists for the recreation and enjoyment of our citizenry...and visitors from foreign lands. Our government maintains those national parks for as long as that same government has regulated radio.

Some in this newsgroup don't want recreation and enjoyment for all. Indeed, they care little for anyone not believing in their elitist little credos of service, sacrifice, glory for their own little nation-state of amateurism.

There's a parallel there. The fedayin of amateur radio can't see it. They are too busy strapping on their bombs to suicide themselves...and pointing fingers at everyone else for their "problems" while saying they are "right." It is status quo or suicide to them.

Dave:

It would be interesting to see what ham radio would be like today
if the code testing requirements had been reduced to present levels
in 1965. I predict that we'd have about the same number of hams,
but there would not be any CW-specific HF subbands; therefore,
very little (if any) CW activity. What hams we had would be generally
inactive, except for roughly the same amount of dyed-in-the-wool SSB
DX'ers and contesters. Digital mode usage would be virtually unknown.
We'd also be looking at the same problems with regard to reallocation
of spectrum in the VHF/UHF bands. I also predict that the problem
of "aging" in the ham population would be much worse, since the code
was a big factor in *attracting* younger hams. Along with all this,
the technical involvement of the average ham would not have increased
whatsoever -- in fact, we'd be more "appliance oriented" than ever.

Just among Christians, I know of several denominations that reject all violence and atrocity. And they live up to the preaching. I'm sure there are many others.

>Religion has been and remains today the number one cause of major >warfare in the world since the beginning of recorded history. Praise the Lord >and pass the ammunition.

I disagree. It's not religion per se, but rather religious intolerance and idealogical zealotry, that are the driving forces.

My main point is simply this: Islam is not one monolith of a religion, in which
all Muslims believe exactly the same things and have the same motivations.
Would you lump all Christians together with Jim Jones and the KKK?

Certainly that is correct. The problem is that the radical fundamentalist wing is not an insignificant splinter group, and their adherence to a basic fundamental interpretation of Islam includes mandates to moderates by which they may be considered evil themselves if they refuse to do Allah's bidding as interpreted by the radicals. How did the Taliban take over Afghanistan? By harshly suppressing the moderates, ALL of them. Subjugation in the extreme.
They are not the trivial sort of offshoot group you seem to consider them to be.
Virtually all Muslim countries administrations hang on the edge of anarchy because of anti Western feeling among mainstream Muslims. Surely you heard or saw all he celebrating that took place on the Arab street when the towers came down. All that can't be dismissed as the work of a small splinter group.

> Would you lump all Christians together with Jim Jones and the KKK?

If you don't discern the difference between the above and a widespread network of Islamic terrorists who enjoy great popular support from within mainstream Islam, I don't think you adequately understand the problem. Jones was responsible for doing away with his followers, the KKK with intimidating and even killing some members of a certain minority. Neither, nor any other modern day religious fanatic I'm aware of had designs on weapons of mass destruction with which to destroy Western civilization in the name of God.

Yup. It's history. But what we have to deal with today is another
matter. What would the terrorists do if they could do anything they
wanted? Had all the worst weapons imaginable? Brushing all that off as
some ordinary religious eccentricity is uninformed to say the least.

Usually upon "believers" of
> >other faiths, but occassionally upon thier very own.

Right, it's not religion per se, but gross bastardization of it by what
amounts to mental cases who dream up all sorts of scenarios. If we fail
to take the threat seriously in this case, we do so at our peril, as was
well proven on 9/11. We knew a lot about the threat, and failed to
properly assess it.

I imagine not.
The bureaucracy of a religion is always the very worst aspect of it. It
tends to write its own history and to propagate that history as fact.

Major events are going down by the hour out there right now which are reshaping the world in ways which could in the end have as much impact on reshaping geopolitics as did WW2, particlarly Arab geopolitics. Note that they were only peripherally involved as players in WW2. Mostly because they were British and French colonials. There's a message in that.

Yes Dick, there are reclusive oppressive Muslim regimes like the Saudis and the Yeminis. But lookit what they're up to as I peck at the keyboard. CIA paramilitary units and elements of the Delta Force are rolling into Yemen in volume at the invitation of that goverment . . If the Saudis hadn't jumped ship and joined (+/-) Dubya's jihad Saddam Baby wouldn't have blinked like he did yesterday.

I'm postulating that what we're seeing right now is in a sense is a huge trash within the Muslim world which in some ways is not unlike those Christianity went through in Martin Luther's days. It's update time and we're living it. This is WW3. I think that in the end the fallout will be as positive as those which fell out of WW2.

Having had the tables thoroughly turned on his own rants and "Do As I Say Not Do As I Do" behaviour, Lennie, true to form, brings to bear his "It's A Radio NG" rant.

It IS a radio NG, and that's not the "problem". The problem is that Lennie loves to pull threads all over the spectrum of obfuscation when it suits him, and then demands a realignment when it doesn't.

He also takes great liberty with his interpretations of who's trying to "moderate" the content of the NG when it suits him.

A putz of monumental proportion.

I've been saying it for days, and here he does it again.

Thanks, Lennie.

>Enhancing international goodwill?!? How? A quick glance at

>Strictly political turf war, not religious.

How can you say this and not laugh, Phil?

It is the very tenets of BOTH religions that promote the "political" and
military responses.

You cannot sever the two. They are inseperable.

You mean like formulating and conducting a scientific study with
on-the-air testing to determine interoperability like the ARRL did with it's
experimental project...???

Oh..Wait...YOU proclaimed it otherwise...Excuse me.....

>Amateur radio has largely been an avocational radio
> recreation activity for a half century. There is nothing wrong
> with recreation for recreation's sake. Our national park system
> is enormous and exists for the recreation and enjoyment of our
> citizenry...and visitors from foreign lands. Our government
> maintains those national parks for as long as that same
> government has regulated radio.

You are right. Amateur Radio for recreation's sake is OK. However that is
NOT the ONLY application of the service, and that is codified into federal
regulations. There are very definite PRACTICAL applicaitons for it.

Sorry you don't see it otherwise, but them's the facts, Lennie.

>Some in this newsgroup don't want recreation and enjoyment
> for all. Indeed, they care little for anyone not believing in their
> elitist little credos of service, sacrifice, glory for their own little
> nation-state of amateurism.

Quotes. Verbatim quotes, Lennie. You stated this as an assertion of fact.
Now I want to SEE your support of that assertion.

>It is status quo or suicide to them.

You ARE such an idiot...And I thought it was just a "summer thing".....

>Maybe this can be a start to end all this jihad crap...

I would say yes except for one thing...

Judiasm and Christianity have various "leaders" of the major sects.
Somebody somewhere is the "spiritual leader' of that various branch of theology
and can, at least in generalities, speak for thier adherants.

WHO speaks for the Muslims?

I can empathize with many of the Muslims who ARE being persecuted right
now as a result of "backlash" in the days after 9/11. I DO know many honest,
devout and peaceful Islamic faithful who have absolutely NO desire to be even
remotely associated with the lunatics who are using "Islam" to justify their
acts. They are people for whom family, morality and character are paramount in
their lives.

But what the Muslims desperately need right now is SOME "voice" to stand
up to the "clerics" and the extremists and say NO, this is NOT "Islam" that you
are invoking. It is a perversion, no different than the perversions of
Christianity that motivated the Crusades.

Until that whole of the Islamic faithful find their voices and get some
stiffness in their spine to confront the clerics who pervert Islam into a
justification for murder, then the rest of the world can only assume thier
silence is tolerance and acceptance of the extremists conduct.

The point was simply that not all "Christians" hold all the same views and sympathies.

The KKK was/is all about intimidation. Not just of blacks, but of Jews and Catholics and many others. Back in the '20s they marched on Washington in great strength. Their intimidation tactics certainly qualify as terrorist.

> Neither, nor any other modern day religious fanatic I'm aware
>of had designs on weapons of mass destruction with which to destroy
>Western civilization in the name of God.

Good point!

Which is why we need to work with the Russians and other world powers to reduce the threat of those folks getting such weapons. Don't both Pakistan and India have nukes?

Remember when the "godless Communists" were supposedly going to nuke us out of existence? Turns out they thought we were going to do the same thing to them. Fact is that their being "godless" was an asset to peace, because there was no promise of a Commie heaven if things went wrong. At worst, they wanted to dominate the world, not blow it up.

Here's another good book: "Blind Man's Bluff", about the role of submarines in Cold War intelligence. Fascinating.

>Mostly because they were British and French colonials. There's a
>message in that.

Yep. They don;t want to go back to being colonials again.

Also recall that for many years the West and the Rooskies vied to be "friendly" with various governments simply to deny that government's assets to the other side. Example: A blind eye was turned towards the oppressive regime of the Shah of Iran because he was on 'our' side, not the Soviets. Now the Russians aren't the enemy anymore.
>
>Yes Dick, there are reclusive oppressive Muslim regimes like the

>those Christianity went through in Martin Luther's days. It's update
>time and we're living it. This is WW3. I think that in the end the
>fallout will be as positive as those which fell out of WW2.

Had to use the word "fallout", didn't ya?

Main point of all this in regards to 5.2 MHz band is that with stuff like that going on, NTIA sure isn't going to let go of a perceived asset such as nonshared use of 5.25-5.4. And if we hams push too hard, or the wrong way,

we'll just look worse than totally clueless and harm our own cause in a big way.

It would be great to have a 60 meter band, but not at the cost of making big enemies in high places.

> justification for murder, then the rest of the world can only assume thier
> silence is tolerance and acceptance of the extremists conduct.

Here's where we find one of the major problems. A Muslim standing up
to one of their clerics is committing a major offense. Note that is true
even among those living in the USA, where religion and government are
supposed to be separate. Under Islam they are not, even here. For a
Muslim to challenge the words of his Imam is not only sacrilege, it's
considered violation of law (the Koran is as much law to them as
anything civil) and certainly blasphemy. Most who do it usually stand
alone, ostracized by their communities. Not the sort of behavior one

eagerly participates in.
In other words for the most part the religious leader's words are virtual law. Until this viewpoint changes this problem will persist, and is one of the chief reasons Islam is such an intractable problem for us. Moderates who have never considered being anything else can easily decide, in a moment of depression, that after a lifetime of resistance to Allah's will (and a lifetime of haranguing by clerics), it's finally time to pay their dues.....
We've already seen a few examples including the copilot of Flight 800 diving the plane into the ocean while muttering something about "Allah's will" and the shooting at LAX a few months ago.

Exactly. In a day where there was no such thing as a weapon of mass
destruction. Nor handy jetliners to hijack and easily turn into cruise
missiles.
We face a different sort of threat situation entirely. It truly is a
good thing that the Crusaders had none of today's weapons.

> >Virtually all Muslim countries administrations hang on the edge of
> >anarchy because of anti Western feeling among mainstream Muslims.
>
> They also hang on the edge of anarchy because there is not much cultural
> tradition of democracy and equality in many parts of the world.

And we arrive at a crucial point- Why is there no such traditions
there? Basically because Islam does not allow for such things. An
individual's life does NOT belong to him, to choose his own course. His
life belongs to Allah, and his only valid function is to do the bidding
of Allah, as interpreted by his local cleric, whose word is functional
law. Individual feelings and desires are deeply suppressed. That this
facet is downplayed in some areas of Islam is not a primary point. Even
the moderates can all too often be whipped into a feeding frenzy. In
Allah's name.

Direct comparisons to Christianity in any modern sense are simply
invalid.
Islam functions today virtually as it did in the middle ages, for a
huge portion of Islamics. Nowhere does Christianity adhere to Middle Age
precepts, such as killing for Christ, outside a few tiny groups of
zealots single-mindedly bent on closing abortion clinics. On the other

hand, vast numbers of Islamics would like to see us all dead. In the
name of God.

It certainly wasn't only the Palestinians. Celebrations were going on
around the globe. The mainstream US media doesn't want you to see any
more of that than absolutely necessary, but it sure was on BBC.

Recent defectors say that Iraq has enough material for three nukes
(from the news yesterday) That was almost inevitable, given the
outlawry within post-Soviet Russia. Their own Mafia makes ours look like
a handful of bungling amateurs.

Don't both Pakistan and India
> have nukes?
>

Yep. Pakistan particularly, being almost totally Islamic, is the most worrisome in terms of terrorists getting hold of nuke material. Terrorist sympathizers there are legion.

> Remember when the "godless Communists" were supposedly going to nuke us out of
> existence?

As somebody said "I lived it". Part of it on the East/West German border. It wasn't all that much fun. I've looked the Russian Bear in the eye. Didn't much like what I saw.

>Turns out they thought we were going to do the same thing to them.

Did you hear about the Russian Colonel who refused to launch an ICBM attack against the US when he was ordered to do so? They had detected what they were sure was a launch from the US toward them. The Colonel was sure it was a mistake, and declined to launch the response strike when he was ordered to launch. Of course it turned out to be a false alarm. He undoubtedly prevented a nuclear holocaust. He wasn't disciplined, either. That information came out after the disintegration of the Soviet Union.

Sometimes mankind hangs on a thread.

> Fact is that their being "godless" was an asset to peace, because there was no

Interesting comparison to Islam, isn't it? Similar aims, very different thinking.

So it's back to Saddam playing poker with the neutered UN, a game he's won hands down since Desert Storm. Now we gotta work to suppress all the UN "but he agreed...." nonsense that will drag on for months or years if we allow it.
Seems they want to find reason to let him alone, regardless of what he's up to.

> I'm postulating that what we're seeing right now is in a sense is a

That's my big worry. Modern weapons in the hands of third century illiterate zealots.
We can only hope our leaders and military are up to the job, and that our people are gifted with understanding of, first, what the end result must be, and second, that sometimes very unattractive means must be employed to get there.

Dick

My mistake, you have it right, Steve. Flight 800 was the one where several witnesses reported seeing something that might have been a small missile fly up to it just before it exploded and fell into LOng Island Sound... Investigators finally said it was an explosion inside a fuel tank that caused the crash, which they thought was caused by frayed wiring. In side a fuel tank? Hmmm.

Several things refute that.

1 - The "Palestinian" Arabs are not uniformly Moslem. There is a
significant percentage of them who are Christian, especially on the
Judean hills around Jerusalem.

2. Military response is not a tenet of Judaism and the
ultra-Orthodox fundamentalist Jewish community is exempt from
compulsory military service ny mutual agreement. Political
muscle-flexing is their thing. Whatever military response Israel
employs is strictly a secular concept.

3. Although I cannot talk authoritatively about the Arab population,
the vast majority of Jewish Israelis are secular and non-practicing
in Western terms. The only Prime Minister who had "religious"
tendencies was Menahem Begin in the 1970s and his "practice" was
strictly private. The late great David Ben-Gurion, founding Prime
Minister of Israel, was non-religious or even anti-religious even
though he had to make severe compromises with that faction for
political "domestic tranquility".

As I said, the conflict is political, not religious - at least from
the Israeli viewpoint.

Judaism does not have any hierarchy or "authoritarian voice"
who speaks for all Jews. There are various scholars and
leaders who are respected but they speak for no one but
themselves and their adherents.

The Prime Minister of Israel - whomever he or she may be at any time -
certainly does not speak for me or all Jews in our Jewish practice and
committments.

Gotta agree. Too bad there were no more like him. Carter picked up on
his
"The buck stops here" and promptly dropped it with a bang. Wimp. No
comparison whatever, never were in the same league. Today Carter says
"war is not the answer". I wouldn't want to hear his version of what is.
It's include more drivel about the UN which has lost almost all it's
credibility in the past decade. You don't ignore SH's flagrant violation
of UN resolutions -ALL of them- with not even a hint of action and stay
credible. SH is once again playing to the appeasers. I have no doubt UN
will fold as they always do. It's endemic in the makeup of the
organization. When almost any pint size nation can dictate to the rest
of the world what any action will or will not be, such a result is
inevitable.

Like many people I almost always vote Republican because that's where
virtually all the political conservatives are these days. Harry's old
party unfortunately contains most of the clowns these days. It's a
rotten shame.

We couldn't win in any event. It's a shame some of those people in high
places don't evaluate such things in advance instead of being so far
behind they even miss FCC filing deadlines.

Tell us all about your amateur "homeland security" plan.

Are you going to act the morseodist minuteman, ready to
leap into "security" activity brandishing the J-38 you carry
in your car? :-)

"Take THIS you terrorist...di-di-dah-dit di-di-dah !!!"
says the morse minuteman, showering the evil
person with a hail of high-speed morse.

There, that will show them you Mean Business!

>> It would be great to have a 60 meter band, but not at the cost of making

Yes, "everything is against the morseodist minutemen." :-)

Hams could peition for a nearby band in the 5 to 6 MHz region
of the spectrum, couldn't they? Or does it HAVE to be the exact
one used for "propagation experiments" (well after HF propagation
characteristics have been known, analyzed, and used) as in the
limited-use ham experimental grant?

You can get Part 2.106 free for your own study of useable HF
frequencies. See the FCC OET page listing for a forward link.

On the "missing FCC filing deadlines:" Note the number of
VERY late comments on 98-143 well past the original January
15, 1999, deadline. That includes the putzmobile driver who

keeps trolling away in here. :-) :-) :-)

Larry, you don't even know what the code requirements will be in 2027
when I start to work on it again. It might even be outlawed by them,
and code enthusiasts will have to huddle in dark corners to practice
it.

I see a problem in both enforcement and applicability...to wit

How does anyone know what international law is?

If it ain't in Part 97, just what can the FCC take action against?

How does Part 97 hold me, a ham, accountable for laws
NOT spelled out in Part 97?

Is there an inclusion by reference in Part 97
to specific "international law(s)?

If someone is in a foriegn country, licensed or not, the FCC has no
jurisdiction over what that person does there.

Posted for discussion...

That pore 'ole squish was the Oval Office out-to-lunch flower child.
Still is. I forget the specifics of the incident but Slick Willy was
up somebody's butt and doing some sword rattling, some country we had
a problem with. So there goes the Flower Child again, he lands in this
place to try to convince them to be nice. The press reported than when
Slick Willy was told about Carter's "mission" he rolled his eyes
upward and groaned something like "Oh SHIT!"

I was opposed to the invasion of Iraq thing until very recently. But
now that all the cards have been laid out it's making sense.

The pint-sized outfits won't have all that much to say about it for
once, this one has landed in the hands of the inner circle. Dubya
smells it, he hasn't let go of his ultimatum at all, either the UN
acts or we will. DoD is very visibly moving assets into the Gulf
region at a huge rate. This is gonna be the pop quiz from Hell for the
UN. Lotta squirming going on in diplomatic circles. I don't think

Dubya is gonna blink. Tough beans.

It's gonna be one helluva divided planet if the UN wimps out. I don't even wanna think about it . . !

There hasn't been a Harry since Harry. He was all about a level of integrity we haven't seen since. Republican or Democrat. The best we can hope for is brawls between rotten conseravtives, rotten liberals and the really rotten media which result in something like standoffs in the broad center. I happen to prefer life a bit right of center so thee and me don't have much choice about which way we vote huh?

Maybe they do if the person attempts to operate a ham radio station without obtaining a locally valid license, on the strength of their part 97 license, in circumstances where there is no local government. If the US license is in use, FCC does have jurisdiction. If the party has no US license, and just decides to assign himself a callsign and go on the air, that might be another matter. But if one is an American citizen he doesn't get a pass just because he has left the boundaries of the USA. They go after drug smugglers who are citizens off shore as well as on.

International Radio Regulations apply anywhere - in countries whose
Administrations are ITU members (I can't think of one who isn't),
on the "high seas", and in international airspace, In essence they
are a "back up" to national regulations.

>How does anyone know what international law is?

International Radio Regulations are published by the ITU and van be
purchased by anyone. Just because it's not available for free
access on the 'net or in your local library doesn't make it
non-available.

> >If it ain't in Part 97, just what can the FCC take action against?

Sect. 503(b)(1) of the Communications Act provides that anyone
who violates the terms of any FCC license. applicable Federal statute,
regulation, or treaty which is binding upon the the US can be found
liable to a monetary forfeiture. The International Radio Regulations
fall into the "treaty" category.

> >How does Part 97 hold me, a ham, accountable for laws NOT spelled out
> in Part 97? Is there an inclusion by reference in Part 97 to specific
> "international law(s)?

Section 1.80(a) says the same thing. Just because it's not in Part
97 does not mean that it's not enforceable against amateur licensees.
"I didn't know the law" is not an acceptable defense.

> >If someone is in a foreign country, licensed or not, the FCC has no
> jurisdiction over what that person does there.

If the foreign Administration notifies the FCC that the US licensee
has been found in violation of provisions of the International Radio
Regulations the FCC can take action against the licensee as specified
by the Comm Act and Part 1 of the Rules.

What is the specific reference? A "generic" set of terms
such as "international law" doesn't set any refernece at
all.

If I have to BUY the rules to know they exist, then you
expect me to be liabel for them? That may read OK in a legal sense but
I'll bet the FCC hasn't used that angle against a ham's
actions that violated international rules for activity outside the US.

OK, looks nice on paper, but what's the case law involving one
or more US hams.

That seems to impoly all US hams must know international laws
and treaties. Frankly, that's not likly nor is it probably ever been
enforced

against hams.

> > >If someone is in a foreign country, licensed or not, the FCC has no

I note that this statement presumes a proactive action
by the foriegn administration. The implication then is
that without such "official" notification from some
recognized foriegn administration, the FCC does nothing.
ergo...the FCC has no jurisdiction without that foriegn
official report.

In Phil K's response, he relies on a proactive report to the FCC
by a foriegn administration to trigger FCC jurisdiction/action.
If there's no local gov't, that sure isn't going to happen.

> If the
> US license is in use, FCC does have jurisdiction.

Operating outside the US doesn't rely on the US license.
When I am in Canada, I operate as a Canadian license
with the rules/privileges that Canada has in effect. I can,
for example, operate SSB from Canada in HF band segments
that I could not operate from when in the US. Likewise,
if some frequencies segment is not allowed to Canadians,
but is "legal in the US" I can not use those frequencies while
in Canada.

> If the party has no
> US license, and just decides to assign himself a callsign and go on the
> air, that might be another matter. But if one is an American citizen he

It is a matter of jurisdiction, not one of getting a pass.
If a US citizen in the Netherlands buys and uses marijuana
in Amsterdam, then he or she can't be prosecuted by any US
jurisdiction for that action.

> They go after drug smugglers who are citizens off shore as well as on.

The US does not charge people for foriegn drug actions unless
or until the activity engages or enters the US jurisdiction.

Sure, and your Canadian license is dependent on the fact that you have
one issued by the FCC, assuming you don't go take the Canadian test, if
they even allow that.
When I was DL4RQ the issuance of my German license did indeed depend
on my holding an FCC issued license.

I can,
> for example, operate SSB from Canada in HF band segments

None of which has any bearing on a ham radio station operated by a
member of the US military in Somalia, where there is no local government
to issue a license on any basis.

> > If the party has no

That's right. If your foreign operation depends entirely on your
having an FCC issued license, as Brian's did, FCC does indeed have an
interest in what you do.

> If a US citizen in the Netherlands buys and uses marijuana

ALthough they need never have set foot on USA soil in the process.
Pablo Escobar and General whatshisname, the former Panamanian President
now serving in one of our federal jails are examples.

Phil can clarify this or not, as he wishes.

If a traffic cop radars you going 10 miles over the limit and decides
to give you a pass, then he has no jurisdiction? What a concept.

> who speaks for all Jews.

Did I say there was? I DID say there are various representitives who can speak "at least in general" for various groups. And thos varous scholars who ARE recognized do hold some acceptance in public forums.

>The Prime Minister of Israel - whomever he or she may be at any time -
> certainly does not speak for me or all Jews in our Jewish practice and
> committments.

Did I say he did?

> muscle-flexing is their thing. Whatever military response Israel
> employs is strictly a secular concept.

Not a tenent of the religion itself, but the Jewish people of many walks
of life wield the big stick! Please tell me that military service and
lifestyle are not interwoven with current Israeli lifestyle?

I have a copy of "Emergency Medical Services" magazine of two or three
months ago where an Israeli paramedic is on duty, wearing his yarmaluke, and
weilding a locked/loaded M-16. That's on the cover.

>As I said, the conflict is political, not religious - at least from

I dare say that several Israeli acquintences of mine would differ in that
assessment, Phil.

>
>That pore 'ole squish was the Oval Office out-to-lunch flower child.

Good governor, poor president. Only reason he got elected was the multiple-whammy of Watergate, Ford-pardons-Nixon, post-Vietnam angst, energy crisis and a rotten economy.

Classic case of the well-intentioned Washington outsider being hung out to dry.

>> It's include more drivel about the UN which has lost almost all it's
>> credibility in the past decade. You don't ignore SH's flagrant violation
>> of UN resolutions -ALL of them- with not even a hint of action and stay
>> credible. SH is once again playing to the appeasers. I have no doubt UN

>> of the world what any action will or will not be, such a result is
>> inevitable.

>I was opposed to the invasion of Iraq thing until very recently. But
>now that all the cards have been laid out it's making sense.

Yep. Although they can't admit it publicly, I'm sure many of those pint-sizers realize SH should have been dealt with in '91. Or at the first violation of the UN resolutions. Example: UN inspectors are turned away from an Iraqi facility?

Fine. UN inspectors pack up and go home, B-52s come over and pound the denied facility into rubble. Plus three other similar facilities. Then the inspectors wait to be invited back. Do that enough times and there won't be anything left to inspect.

>The pint-sized outfits won't have all that much to say about it for

>region at a huge rate. This is gonna be the pop quiz from Hell for the
>UN. Lotta squirming going on in diplomatic circles. I don't think
>Dubya is gonna blink. Tough beans.

And there's a precedent. I dunno the exact date, but back before the Gulf War Israel took out a nuke facility in Iraq. Set back SH's nuke program in a big way. Lotta yelping from the peanut gallery but no real action.
>
>It's gonna be one helluva divided planet if the UN wimps out. I don't
>even wanna think about it . . !

Best scenario would be to get Putin to support the USA position. Russia doesn't have to actually do a thing militarily,
just stand up and say they're on our side.

>Operating outside the US doesn't rely on the US license.

You probably do - see below.

>When I am in Canada, I operate as a Canadian license
>with the rules/privileges that Canada has in effect. I can,
>for example, operate SSB from Canada in HF band segments
>that I could not operate from when in the US. Likewise,
>if some frequencies segment is not allowed to Canadians,
>but is "legal in the US" I can not use those frequencies while
>in Canada.

Your operation in Canada is allowed because the USA and Canada have a
reciprocal agreement. The Canadian govt. allows you to operate there without
your passing a test or getting a Canadian license only because you have a valid
US amateur license. IOW, your Canadian operation is totally dependent on having
that US license. And you probably operate as K2UNK/VEx, not as a VE licensee.

All good things.

>> If the party has no
>> US license, and just decides to assign himself a callsign and go on the
>> air, that might be another matter. But if one is an American citizen he

>> doesn't get a pass just because he has left the boundaries of the USA.
>
>It is a matter of jurisdiction, not one of getting a pass.

I'd say it's a matter of privileges being granted as a courtesy to visitors.
We're talking about licenses, not rights.

>If a US citizen in the Netherlands buys and uses marijuana
>in Amsterdam, then he or she can't be prosecuted by any US
>jurisdiction for that action.

Apples and oranges. Marijuana use is not regulated by international treaty and
no license is needed to use it where its use is legalized.

A better analogy would be the purchase of prescription drugs in Amsterdam based
on prescriptions written by an American doctor.
>
>> They go after drug smugglers who are citizens off shore as well as on.
>
>The US does not charge people for foriegn drug actions unless
>or until the activity engages or enters the US jurisdiction.
>
Or if there is clear evidence that the foreign drug action will do so.

But it's still apples and oranges.

Putzie Poo does have a memory albeit a faulty one, as we already knew. Several years ago I happened to mention here that when working I had carried a 12 volt HF rig in a suitcase when I traveled, along with a CW key so that I could also work CW if needed, for emergency use (As it happened, my daily travel took me right through the New Madrid area very often). But it wasn't a J38, it was a paddle.

Or maybe Putzie Poo just prints out all our posts so he can pore over them in detail to find little gems like that to misquote.

Wouldn't ya love to be that hard up for something to do? If he actually had any interest in ham radio he'd be following it instead of slamming it here on rrap all the time. Pitiful case, that Putz.

>destruction. Nor handy jetliners to hijack and easily turn into cruise
>missiles.

The hijack trick worked because the passengers on three of the flights couldnot
imagine what the hijackers would actually do. There is evidence that only the
hijack-pilots knew it was a suicide mission. Once the passengers on Flight 93
realized what was up, they fought back. Successfully. The hijack trick won't
work again.

>We face a different sort of threat situation entirely. It truly is a

>law. Individual feelings and desires are deeply suppressed. That this
>facet is downplayed in some areas of Islam is not a primary point. Even
>the moderates can all too often be whipped into a feeding frenzy. In
>Allah's name.

And that same thing was true of European/Christian civilization for most of its history. Divine right of kings, nonseparation of church and state, etc. Heck, look at the republic of Ireland. Still heavily controlled by the Catholic Church, to the point that most people in Northern Ireland (even Catholics) don't want to unify because of all the rights they'd lose.
>

One word: Creationists.

>On the other
>hand, vast numbers of Islamics would like to see us all dead. In the
>name of God.
>
Whatever the reason, that's the bottom line. So we must ask ourselves:

- Why do they want us all dead?
- What can we do to prevent them from getting their wish?
- What changes can we make to fix the long-term situation?
- What, exactly, do the terrorists want?

> Recent defectors say that Iraq has enough material for three nukes

I bet Ivan didn't like what he saw, either.

One of the reasons the Mideast is such a mess is that the West, particularly the USA, backed or ignored all sorts of tyrants because they were supposedly our "friends". SH rose to power by murdering all his opponents, but Reagan & Co. were too preoccupied with the "evil empire" to object.

Or look at Afghanistan and Pakistan. CIA funneled arms, training, intelligence and supplies to Afghan "freedom fighters" through Pakistan. Turned that country into the Soviet Union's version of Vietnam. Then when Ivan gave up and left, the West lost interest and became uninvolved in both countries.

>of some sort.

Except for folks who haven't gotten the word, like North Korea and Cuba. The rest are catching on fast. The cyrillic handwriting was on the wall when a McDonald's opened up on Red Square.

Cuba is a really sad story, too. FC took over right at the beginning of the jet/hydrofoil age but could not see the tourist opportunities. If he'd had any sense at all, he would have seen that Cuba could have been THE Caribbean island destination. Close to the USA but not far from EU, exotic but civilized, lots of labor and resources. Also world-famous cigars. And enough arable land to eliminate the need for expensive importation of food. Net result would have turned Cuba into the richest island in the area, as tourists from all over brought in hard currency.

Instead, he becomes a more rigid commie than the soviets, and the country justs gets poorer and more isolated from the world.

Yet even at the height of the Cold War, CO2 hams are all over the place, working the world. Friendship by amateur radio transcended the politics. Most of them are on CW, too.

>But not the poor A-rabs. They're still stuck in Mohammad's
>third century.

The Saudis are trying really hard to modernize, but their idea of "modern" may not be the same as ours.

There's a historical precedent to all this.

Japan was an almost totally isolated culture for hundreds if not thousands of years. Stuck in a medieval time warp until an American fleet sailed into Tokyo Bay to say hello.

The JAs figured out real quick that samurai swords and bamboo armor weren't going to cut it in a world with cannons and iron steamships. So they set about catching up with the West.

And catch up they did. In less than 100 years they went from the Middle Ages to a modern industrial nation with global ambitions. Also a nation that was hugely dependent on imported raw materials.

But cultures do not change as rapidly as technologies. Tojo And Friends weren't much different than their predecessors with the swords and bamboo. They played the "Our Emperor Is A God" card for all it was worth. We all know how the resulting fight turned out.

Fast forward sixty years and the two former enemies are friends and #1 trading partners.

>>When I am in Canada, I operate as a Canadian license
>>with the rules/privileges that Canada has in effect. I can,
>>for example, operate SSB from Canada in HF band segments
>>that I could not operate from when in the US. Likewise,
>>if some frequencies segment is not allowed to Canadians,
>>but is "legal in the US" I can not use those frequencies while
>>in Canada.
>
>Your operation in Canada is allowed because the USA and Canada have a
>reciprocal agreement. The Canadian govt. allows you to operate there without
>your passing a test or getting a Canadian license only because you have a
>valid
>US amateur license. IOW, your Canadian operation is totally dependent on
>having
>that US license. And you probably operate as K2UNK/VEx, not as a VE licensee.
>
>All good things.

And if I remember correctly, did the FCC not come out and say that as a condition of this specific agreement, a United States Amateur operating in Canada could NOT exercise any privileges or utilize any band/mode combinations not allowed under his/her license?

>>If a US citizen in the Netherlands buys and uses marijuana
>>in Amsterdam, then he or she can't be prosecuted by any US
>>jurisdiction for that action.
>
>Apples and oranges. Marijuana use is not regulated by international treaty
>and
>no license is needed to use it where its use is legalized.

However if you return to the Untied States and controlled substances are in your system that are NOT allowed for whatever legal reason, it doesn't matter how "legal" they were WHERE you consumed them.

Many a serviceperson has returned from a European vacation, having had a significant amount of pharmaceutical recreation, only to find out that they were STILL in trouble when they got home.

>A better analogy would be the purchase of prescription drugs in Amsterdam
>based

>on prescriptions written by an American doctor.
>>
>>> They go after drug smugglers who are citizens off shore as well as on.
>>
>>The US does not charge people for foriegn drug actions unless
>>or until the activity engages or enters the US jurisdiction.
>>
>Or if there is clear evidence that the foreign drug action will do so.

A prescription written by a US doctor and "honored" by an offshore
pharmacy may be legal in Lower Slobovia, but if that drug is illegal in the
United States, it's still illegal.

>crisis and a rotten economy.

I was stationed in Georgia when Carter was elected. Many Georgian's
stated he was just promoted to a higher level of incompetness.

Judging by his lack of initiative and poor economic programs, I'd have to
say this was so. He was a talented negotiator (hence the Camp David accords
with Isreal and Egypt), however he failed as a policy man and as a
commander-in-chief.

In the Iran affair, he perpetrated the same errors that had led this
nation to failures in Viet Nam, specifically instead of giving military
commanders an objective and them letting them obtain that objective by thier
own means, he tried to manage things from Washington. He was a lack-luster
Naval officer, and even worse in the White House.

He's done more good for America wielding a hammer for "Habitat for
Humanity" than he ever did as president.

>Classic case of the well-intentioned Washington outsider being hung out to
>dry.

I can't help but feel that he helped supply the clothesline and pins.

>Best scenario would be to get Putin to support the USA position. Russia
>doesn't
>have to actually do a thing militarily,
> just stand up and say they're on our side.

Better yet...Russia is in severe financial distress. I say we swap hard
US currency for access to THIER oil fields and we let the camel jockies in ALL
of the Middle East eat sand.

If the reports in various journals are correct, the Russians are sitting
on more oil that the camel jocks ever thought about. If we start spending our
greenbacks in Moscow instead of Riyadh or Bagdhad, maybe we see a decrease in
the "tensions" in the middle east...???

>>There hasn't been a Harry since Harry. He was all about a level of
>>integrity we haven't seen since. Republican or Democrat.
>
>Yup.

Harry set up the precedent for failure in our Armed Forces that lasted through Viet Nam. Had we dealt with China, the Soviet Union and the Korea's in the late 1940's and early 1950's, we wouldn't have spent the next four deacdes wondering when the bomb would drop or the yellow hoardes would overrun us.

>I recall Hizzoner Frank L. Rizzo being asked to define "conservative". The
>quoted response was "A conservative is a liberal who just got mugged".

Funny how quick allegiances change under those circumstances, eh?

But the US public wouldn't stand for another war on the basis which it would have came. Harry lost a lot of his current support over Korea, and never regained it. Firing McArthur was only a small part of the reason. People were sick of war and scared of a much wider war with China ,and even Stalin was making threatening noises.

> Had we dealt with China, the Soviet Union and the Korea's in

Dealing with them in any effective way militarily involved high risk of another widespread if not global war. No one including Harry wanted anything like that, so soon on the heels of WW2.

It's difficult to imagine how such an idiot could survive for so long
without his own people taking him out. Initially he was hailed as a hero
but that soon faded as he proved to be just another dictator, not much
better that his non-communist predecessor. At least he was from common
roots, maybe that was what preserved him.

The Saudi government seems to be hanging onto control by a thread
sometimes. They face a largely radical Islam populace that is as
strident as any. The hierarchy seems to exist in fear of overthrow, and
act accordingly to try to refrain from irritating the peasants.
Fortunately all that oil money helps keep things under control.

>

But the Japanese expansionist movement was as violently cruel as any in
history, in China and SE Asia where they butchered and slaughtered
multitudes in cold blood, used humans for deadly experiments and much
more such atrocities. Only a good beating, topped with Fat Boy and the
other nuke brought it to a halt. If Harry hadn't used them, no one can
say what the added human cost would have been, but it was sure to be
larger than the bombs' toll. And they would have largely been out
troops. Harry had the guts to do what needed to be done.

One wonders where the current spat is headed. It's easy to say "be nice
to them" but clearly that won't change their minds any more than it
would have the Japanese. Sometimes a good butt kicking is required.

Dan, it's not a reference or a prediction, it was merely wild speculation.
The code requirement could come back in force - for example, if the world
were overrun by aliens who could only communicate with us in code.

Poor baby, you still can't see that the "slamming" done is directed
at only a few bad examples, yourself included.

So far, you and your cronies in this newsgroup are NOT shining
examples of excellence in US amateur radio. Quit trying to hide
behind thousands of others who know what they are doing and
how to behave...as civil human beings.

Pick up the suitcase and be ready to use your ham radio skills to
secure the nation from terrorist attack. I suggest you use that
suitcase as a bludgeon against suspected terrorists.

Unless, of course, you have some valid suggestions on what to do
about the proposed US ham band at 60 meters as some sort of
"anti-terrorist" service to the nation.

That could be said of any elected official.

When Carter was first elected, one of the causes he pushed was election law reform. All sorts of abuses in Georgia politics. For example, lots of proxy votes from folks in the cemetery. Turned out that Georgia law did not specify that a person had to actually be alive on election day for their vote to count. When a law requiring that voters actually be breathing was proposed by Carter, there was serious and heated debate against it. Including a proposal that votes from people dead less than 3 years should be permitted, such votes being cast by the dead person's family members, who 'would know how Bubba would have wanted to vote'.

>Judging by his lack of initiative and poor economic programs, I'd have
>to say this was so.

He inherited the economic problems that had been created by several previous administrations. Most notably, the wild-eyed deficit spending of LBJ. Also the inaction by Nixon and Ford.

>He was a talented negotiator (hence the Camp David accords

>
> I can't help but feel that he helped supply the clothesline and pins.

Much of politics is trading favors. I do something for you, you do something for me. Compromise and negotiation. Carter didn't have the connections or the IOUs of any of his predecessors, all of whom had been senators and/or vice presidents for years before reaching the White House.

>>Best scenario would be to get Putin to support the USA position. Russia

That's already in progress. Sakhalin peninsula is one place it's already in progress.

One big problem is getting from the oil fields to deep water ports. Lots of landlocked oil in Central Asia, in those 'stan republics. Guess where a pipeline to deepwater would go if it is to avoid mountains and Iran/Iraq.

Both Papa Bush and Shrub are oil men. You think they aren't on top of that whole situation?
>
> If the reports in various journals are correct, the Russians are sitting

"If is for children, spinning daydreams" (thanks, Cecil)

Has anyone seen any real evidence of these "alleged skills, knowledge and experience"? Any books or articles in the amateur radio press in the past 10, 15, 20 years? Technical postings of practical interest, websites, even original or semi-original ideas? Nope.

Now follow that fact to its logical consequence: He has made no, repeat no, constructive contribution to ham radio in many years, if ever. None, zilch, nix, nada, zero.

There's a bazillion ham-radio-related sources of info out there. No reason to try to get blood from a turnip.

Think about it. Who profits from the "type acceptance" ? The FCC? The big electronics manufactures?

What benefit do I get from having to buy a radio for every service I'm involved in? CB, FRS, MURS, Ham?

I personally don't see the problem with people using their dual-band HT's for FRS or MURS. Alot of people do it. As long as you keep it in the power and antenna limits, not even the FCC would care.

We have other things to be concerned about.

The major problem with the 220 band has been the near constant attack of it by non amateur groups. Ever since I have been licensed, and that is 41 years, it has been the same thing over and over again.

This, IMHO, is why 220 never caught on with the US hams. Why spend the bux and have it taken away? Not to mention that 220 is NOT a worlwide allocation so its useless even for satellites.

Just my opinion.

Actually, we all could. In Europe, televisions, xerox copiers, telephones - you name it - have to pass a 'radiated immunity' test. This means the equipment must not vary in any manner when irradiated by rf energy extending from 20 MHz to 1 GHz. What this means is that you could run your radio and not worry about your neighbors' telephone, electronic keyboard, or other equipment from picking up the rf and then claiming it is your radio's fault (much of the rfi problem is caused by rf pickup and audio rectification and amplification of the signal in the device allegedly being interfered with - and it is cause by poor design - actually, CHEAP design - of the equipment and not the transmitter). In actuality, better regulation would result in less problems for all of us. I saw some 14 inch B&W televisions on sale last year at Rite - Aid for $19.99. Made in China. Wanna bet you could fire up a stone cold legal, calibrated, and tested cb next door to that and not have a problem? Just food for thought.

A codeless Ham is still a Ham. For example, contesters, Working All States,
etc.
For years there have been grumblings
>> about these code requirements. Argument is that they are outmoded,
>> oppressive, unrealistic and constitute an unfair barrier to ....
>> potential ham operators....
It is not an unfair barrier to Ham operators, since there is the no code
Technician class. It is an unfair barrier to Ham Radio, as it repels the
average non Ham.

The situation has intensified
>> in the past few years, however...For these reasons, a new type of
>> radio amateur would seem entirely within the scheme of things..."
I have been calling for a new kind of radio amateur, its the idea of an
"alternate radio organization", for those radio amateurs that like radio
technology, but aren't into the weird "Ham scene".

>>Published in Electronics Illustrated, March 1965.
>>

>in 1965. I predict that we'd have about the same number of hams,
>but there would not be any CW-specific HF subbands; therefore,
>very little (if any) CW activity.
Cut out the code requirements and there would be alot more radio amateurs. They
would chose if they wanted to operate in CW, and there would be very little CW
activity.

What hams we had would be generally
>inactive, except for roughly the same amount of dyed-in-the-wool SSB
>DX'ers and contesters. Digital mode usage would be virtually unknown.

There's a typical Ham - SSB DX'ers and contesters.

>We'd also be looking at the same problems with regard to reallocation
>of spectrum in the VHF/UHF bands.
The spectrum would have more value and therfore be less likely to be
reallocated.

I also predict that the problem
>of "aging" in the ham population would be much worse, since the code
>was a big factor in *attracting* younger hams.
Wrong, code is a big factor in repelling potential "hams".

Along with all this,
>the technical involvement of the average ham would not have increased
>whatsoever -- in fact, we'd be more "appliance oriented" than ever.
>
>73 de Larry, K3LT
The problem occurs for non appliance operators, when the appliance operators impose code requirements. There are many Ham clubs and there are very few clubs dedicated to radio technology. The technical people go to a Ham Radio meetings, see that Ham Radio is appliance oriented and don't join. The ones that stay are the ones attracted to appliance operation and Morse code to begin with. This is what is making Ham Radio "appliance oriented".

I don't ever remember such a ruling. Seems to me that it's up to, say, Canada
to detemine what privs they grant to a visiting US ham with a certain class of
license.

>Military justice is a totally different animal.

Point is, they are still in trouble under US law.

And it's not just servicepeople who have to be concerned. Many companies have
random drug testing of all employees, and if residues are detected, the
employee is in BIG trouble. Granted, they are not usually in legal trouble, but
the courts have sided with the companies and not the persons with the residues.
As I understand it, it comes under the concept of 'conditions of employment'
that are accepted by the employee.

As long as you don't bring any of the illegal stuff back, I'd agree.

Still not a good analogy. Try this one:

In the parts of the USA that I'm familiar with, an LPN is not licensed to write prescriptions. But in other parts of the world, that same person's LPN license may be honored as valid, and the LPN may be empowered to write prescriptions.

Will an LPN who writes a prescription in the "other part of the world" be in violation of his USA license?

Based on your statement there, I wonder if a decent compromise would be to EXCHANGE the few Mhz we have on 220 for wider bands elsewhere. Dunno if this is a viable solution or not, but if the band is not being utilized by hams for ANY reason or excuse, then a trade off may be a better solution.

Just a rambling thought...

...and you are a shining example of excellence in amateur radio
because--whoops--you aren't involved in amateur radio, are you?
Oh well, if you ever become a ham, you could begin to become an example
of excellence in amateur radio. In the mean time, you can always ask
someone else about it.

> Pick up the suitcase and be ready to use your ham radio skills to
> secure the nation from terrorist attack. I suggest you use that
> suitcase as a bludgeon against suspected terrorists.

That sounds like another case of sour grapes from one who is not a
participant.

Hmmm...just an analogy, Jim? Otherwise here's the scoop on that:

No one in the United States may write a prescription under an LPN license.
RN's with postgraduate work and residency requirements may be designated
"family nurse practitioners" and may write Rx's for antibiotics, non-narcotic
analgesics (ie: ketorlac), etc. CRNA (Certified Registered Nurse Anesthesist)
may write for some limited post-operative narcotics, but only when
countersigned by an MD anesthesiologist.

>Think about it. Who profits from the "type acceptance" ? The FCC? The big
>electronics manufactures?

Anyone and everyone who has reason to use an electromagnetic device and
expects to do so with reasonable efficiency.

"Type acceptance" is not about "profit". It's about ensuring that the
devices approved meet certain minimum operating standards and do not create
more problems than they solve.

>What benefit do I get from having to buy a radio for every service I'm
>involved in? CB, FRS, MURS, Ham?

Let's start out with not having to explain to the judge why you were not
in compliance with federal law. If you think the FCC and the courts don't take
stuff like this seriously, take a gander at recent events in Florida and
California.

>I personally don't see the problem with people using their dual-band HT's
>for FRS or MURS. Alot of people do it. As long as you keep it in the
>power and antenna limits, not even the FCC would care.

A lot of people speed through school zones and cheat on thier taxes. Is
that OK too? And as noted above, YES, the FCC DOES care.

>We have other things to be concerned about.

Yes...Like making sure the finite resources of the electromagnetic spectrum
are not trashed by people like YOU who seem to think it's OK to just plunk down
a carrier wherever YOU think it's "OK"...

>Lloyd Davies - N0VFP

That explains a lot.

>God created only so many perfect heads...
> the rest he covered with hair !

I bet you have that on a bumper sticker on a Plymouth minivan, don't you?
Right next to the one that says "My Drop Out Laid Your Honor Grad In A Chevy".
Classy.

>ICOM R-75 Hallicrafters S-120

As a "relative" newbie, I don't really know how anyone (Other than the truly handicapped, of course.) can use the "barrier" arguement and keep a straight face. Please correct me if I'm wrong, but aren't we are talking about nailing 20 characters in a row of a possible 43 out of approx. 200 or so sent during the duration of the exam? (AND THE PROSIGNS & PUNCTUATIONS COUNT AS TWO EACH!)

> I have been calling for a new kind of radio amateur, its the idea of an
> "alternate radio organization", for those radio amateurs that like radio
> technology, but aren't into the weird "Ham scene".

This is not such a bad idea, good luck selling it though. There are many who take a dim view of any other "hobby" radio other than the ARS. Just witness the paranoia exhibited when Alan Dixon, N2HOE petitioned the FCC to drop the 155.3 mi. limit on the CB. Some thought this would make the CB a service "paralleling" the ARS. Old fears die hard, but good luck nonetheless.

> Cut out the code requirements and there would be alot more radio amateurs.
They

I don't think so. But that's just IMHO.

> Wrong, code is a big factor in repelling potential "hams".

It'd be interesting to see how many members of NCI are non-hams (read "potential hams") as opposed tp No-code Techs who simply want HF privies?

> The problem occurs for non appliance operators, when the appliance
operators
> impose code requirements. There are many Ham clubs and there are very few

This is
> what is making Ham Radio "appliance oriented".

I couldn't make much sense out of this statement, but I'll try to give it the benefit of the doubt. There's nothing stopping No-code Techs from being dedicated to radio technology. Their transmitting privies are for 50MHz and higher, that's all. (And HF is only a 5-wpm Morse code test away.)

Twenty if you throw in a couple of those 2-pointers, Bert. You are
correct on the "prosigns and punctuation" (and numerals, BTW) characters.
Otherwise twenty five straight letters.

>This is not such a bad idea, good luck selling it though. There are many who

I don't think "paranoia" is the correct adjective, Bert. Each radio
service has a particular "basis and purpose". Ciotizens Radio Service was NOT
created as a "long-range" radio service...Just the opposite, it was created as
a low power, short range personal communications service.

If you are going to say "short range", you have to draw a line
"somewhere"! FRS'ers can call "1/2 mile" short range, and the SETI guys might
set "short range" in light years! It's arbitrary, but if you are going to do
it, then do it.

>> Wrong, code is a big factor in repelling potential "hams".
>
>It'd be interesting to see how many members of NCI are non-hams (read
>"potential hams") as opposed tp No-code Techs who simply want HF privies?

We heard soooooooooo much about how the ranks of the Amateur Radio service
were going to be filled in short-order after the No Code Technician was
authorized. Yes, there was an initial influx, but it just as quickly subsided.

Some aggitators in this NG would point out that 1/3rd of all Amateurs are
presently Technicians. However that ALSO means the 2/3'rds are "coded" (by

licensure) Hams. That number is probably a lot higher, though, since those who hold a post-Restructuring Technician and ALSO hold an CSCE for Element 1 may exercise the privileges of a "Technician Plus" without further Commission administrative action.

Israel provides that civilians who work in dangerous situations
may be armed, with military weapons if necessary. My nephew (who is
both a US and Israeli ham) carried an Uzi when he was in uniform
even though he was a military lawyer, not a combat soldier. His
Gulf-War-era girlfriend was a medic - I wan never sure whether she
was military or civilian. There are several military specialties
which work "plainclothes".

>> They would deny that the conflict is basically political and
>> cultural? Strange.....
>
> Israeli politics and culture are NOT based on Judean prinicples, Phil?

Politics - absolutely no connection except where the secular
political parties have to deal with religious-oriented political
parties whose main goals are establishing a fundamentalist "state
religion" and decanting as much public funds for their own causes as
possivle. The religious parties claim less than 20% of the
electorate but because of the ridiculous multi-party proportional
representation system used in the Knesset (Parliament) consitute
the swing votes in any coalition.

Culture - Jewish culture is based on religious principles, but this
and religious practices are two separate but often similar things.

It is being used. But to a limited degree. The UPS fiasco screwed it up totally. Hams are simply not going to spend the bux to get on it with the hammer always ready to fall.

As for exchanging for more elsewhere. Thats a great idea. But doubtfull. The V/Uhf segments are way to valuable a commodity to give us hams any more.

Source record: 53083

I'm sitting here listening to N8ORT telling everyone that unless your a member you can't check in and can't even ask questions. Isn't that a bit discriminatory considering its on a ham freq and all?

Sometime back I was interesting in offering my help as a NCS. Sent in the info they wanted. Then got a 'form letter' reply saying they didn't want anyones help. What kind of crap is this anyhow?

Dan/W4NTI

>If there's no local gov't, that sure isn't going to happen.

But if you are in a place where there is no foreign administration, and
you are a US license holder only, then your operation is certainly being
conducted under FCC and Part 97 authority. This is stated more-or-less
explicitly in 97.301:

The following transmitting frequency bands are available to an
amateur station located within 50 km of the Earth's surface, within
the specified ITU Region, and outside any area where the amateur
service is regulated by any authority other than the FCC.

That is you operate under FCC authority, and hence under Part 97 rules,
not only in places regulated by the FCC but also anywhere on the planet
where there is no other regulatory authority. In places where there is
some other regulatory authority you need explict authorization from them
and you operate under their rules for you, but in places with no other
regulatory authority Part 97 applies.

>> If the
>> US license is in use, FCC does have jurisdiction.
>
>Operating outside the US doesn't rely on the US license.

It does if you are operating in a place outside the US with no other
regulatory authority to authorize you, and are hence relying on your US
license for permission to operate. Part 97 says so.

>When I am in Canada, I operate as a Canadian license

That's because in Canada amateur radio is regulated by an authority other
than the FCC. You don't automatically get to operate as a Canadian
licensee, however, you only get to operate where they'll allow you to.
They allow you those privileges based on your holding a US license out
of the goodness of their hearts (and because constraining you to operate
under Part 97 regulations would require them to know what Part 97
regulations were, which is more work than just making you observe
the local regulations).

>> If the party has no
>> US license, and just decides to assign himself a callsign and go on the
>> air, that might be another matter. But if one is an American citizen he
>> doesn't get a pass just because he has left the boundaries of the USA.
>
>It is a matter of jurisdiction, not one of getting a pass.
>If a US citizen in the Netherlands buys and uses marijuana
>in Amsterdam, then he or she can't be prosecuted by any US
>jurisdiction for that action.
>
>> They go after drug smugglers who are citizens off shore as well as on.
>
>The US does not charge people for foriegn drug actions unless
>or until the activity engages or enters the US jurisdiction.

Drug laws are not amateur radio regulations. Someone has to authorize
you to operate amateur radio where ever you are, so if you are a US
license holder operating in a place where there is no other authority
your operatiion is being conducted under Part 97.

So if you are in a place with no regulatory authority the FCC allows
you to operate and you operate under Part 97 regulations. As such the
only thing you aren't allowed to do is to ID yourself as, say, T5/K2UNK
or K2UNK/T5 since 97.119(c) prohibits using country prefixes as
self-assigned indicators.

Nothing was "sticking out of that airplane cockpit" in anything I sent.

Does Dickie have anything to offer on Homeland Security enhanced
through a new US amateur band at 60 meters?

So far, there's been nothing but one vague mumbling with nothing
definitely said...and a LOT of very amateur grousing on government
policies and procedures...that Dickie doesn't have anything to do
with or experience in dealing on a national level... :-)

>
>...and you are a shining example of excellence in amateur radio
>because--whoops--you aren't involved in amateur radio, are you?

Quite true...I'm not working DX with CW on HF nor do I care to
have a lifestyle of fantasy imagination using amateur radio to
"prove" anything to anyone else.

I'm just advocating the elimination of the morse code test for
any US radio license.

>Oh well, if you ever become a ham, you could begin to become an example
>of excellence in amateur radio. In the mean time, you can always ask
>someone else about it.

"Excellence in amateur radio" is a thorough memorization of all
past issues of QST? :-)

"Excellence in amateur radio" is slavishly following the standards
and practices of 70 years ago?

"Excellence in amateur radio" is giving tithe and worship to the
Newington Temple and obeying everything they proclaim?

"Excellence in amateur radio" is obtaining a 1x2 call to give the
appearance of a "knowledgeable guru" in radio? :-)

"Excellence in amateur radio" is behaving like an arrogant SOB
to anyone that doesn't like personal viewpoints?

>> Pick up the suitcase and be ready to use your ham radio skills to
>> secure the nation from terrorist attack. I suggest you use that
>> suitcase as a bludgeon against suspected terrorists.
>
>That sounds like another case of sour grapes from one who is not a
>participant.

Oh? Why? Is "Excellence in amateur radio" all about FORCE used
against someone who has different viewpoints? Must be so...

>> Unless, of course, you have some valid suggestions on what to do
>> about the proposed US ham band at 60 meters as some sort of
>> "anti-terrorist" service to the nation.
>
>What does the proposed ham band have to do with you?

Why must anyone answer your question? Oh, yes, you've achieved
"Excellence in amateur radio" therefore you are a GOD and may
act any which arrogant way you want. Understood. :-)

Now, how does this proposed US ham band at 60 meters fit in with
all the war hysteria and some wanting to run out and kill a raghead
for Jesus? How does it fit in with Homeland Security? How does it
have to do with "pioneering the airwaves" that were already pioneered
over a half century ago?

The fact that the "60 meter band" RM came into being so LATE in
the game, and the manner in which ARRL wanted to have
"experimentation in propagation" done indicates a rather extreme

low level in technical competence in radio for all concerned. For all the world to see, it was little more than play-acting the pioneering that had gone on in HF before the requestors and participants were born (let alone got their first ham license).

So...da Judge wants "Excellence in amateur radio" by play-acting "pioneer" in radio? Sorry, I'm not in show business. Good luck in yours, though. "Break a leg" as they say before going on stage...

:-)

>That's true.

Usual PCTA trolling technique...get someone's attention by
insulting them. :-)

So, a handful of PCTA regulars in this venue constitute ALL
of amateur radio? I don't think so.

Is US amateur radio called the Ancient Radiotelegraphy
Service (ARS)? I don't think so, but the PCTA regulars in
here want it so.

>Now follow that thought to its logical consequence: He has no, repeat no,
>constructive interest in ham radio. None, zilch, nix, nada, zero. His claims
>of being interested in the rules or policies are just so much fertilizer.

Incorrect as usual, but why quibble? :-)

>> Thankfully I have my other activities to keep me busy in that regard,
>>Dick!
>>
>> But I agree with you. Can you imagine what good someone with
>

>his
>
>>alleged skills, knowledge and experience could do IF he did something
>>CONSTRUCTIVE with them?

Oh, my, someone NOT in ham radio must DO SOMETHING FOR
ham radio to be "accepted!" :-)

Tsk, tsk, who was it that wanted a "complete course in
microwave techniques" in here? For FREE. :-)

>"If is for children, spinning daydreams" (thanks, Cecil)
>
>Has anyone seen any real evidence of these "alleged skills, knowledge and
>experience"? Any books or articles in the amateur radio press in the past 10,
>15, 20 years? Technical postings of practical interest, websites, even
>original or semi-original ideas? Nope.

Ah, yes, the "amateur radio press." :-)

That's apparently a "blessing upon something" by ARRL? :-)

Is the "Electric Radio" 'zine part of this "amateur radio press?"

>Now follow that fact to its logical consequence: He has made no, repeat no,
>constructive contribution to ham radio in many years, if ever. None, zilch,
>nix, nada, zero.

Hmmm...apparently that includes the FCC since so many hams
keep saying the FCC is destructing US amateur radio! :-)

Oh, and for a paltry $150 anyone can buy the entire 22-year
issuance of HAM RADIO magazine on three CDs (shipping
extra) from CQ Communications or ARRL...or amazon.com
(shipping free). You can see the article by-lines and the
masthead listings in there... :-)

Guess who will augur in with the "defunct" comments? :-)

>There's a bazillion ham-radio-related sources of info out there. No reason to

>Think about it. Who profits from the "type acceptance" ? The FCC? The big
>electronics manufactures?

The users of the radio services the equipment is type-accepted for
do. They profit since they are allowed to buy and operate equipment
for the service without the requirement to demonstrate they are technically
competent to ensure the equipment being operated conforms to the requirements
and constraints for that service. The manufacturer of the equipment takes
responsibility for that instead.

>What benefit do I get from having to buy a radio for every service I'm
>involved in? CB, FRS, MURS, Ham?

You get the benefit of having a radio which technically conforms to the
requirements for each service. Except for amateur radio you can use
any equipment you want since you where instead required to prove you
were technically competent and can hence assume responsibility for
ensuring proper operation yourself.

>I personally don't see the problem with people using their dual-band HT's
>for FRS or MURS. Alot of people do it. As long as you keep it in the
>power and antenna limits, not even the FCC would care.

I personally don't have a problem with that either but the rules are
written for the lowest common denominator, that is a user who has
no idea what power and antenna limits are. For their sake we all
get to play by the same rules.

> "prove" anything to anyone else.

Ahh! Classic "Fox and the Grapes" stuff, Len. You're not working DX or anything else on HF using any mode 'cuz you can't. Thus your "lifestyle of fantasy imagination" comment.

> I'm just advocating the elimination of the morse code test for
> any US radio license.

No, you're not just doing that. In fact, you're doing very little of that.
I'm *just* pointing that out.

> >Oh well, if you ever become a ham, you could begin to become an example

>
> Oh? Why? Is "Excellence in amateur radio" all about FORCE used
> against someone who has different viewpoints? Must be so...

Your comment had zip to do with "Excellence in amateur radio". What
"FORCE" has been used other than the force it took to press the keys to
make words and the force to hit the "send" button?

> >> Unless, of course, you have some valid suggestions on what to do

> "Excellence in amateur radio" therefore you are a GOD and may
> act any which arrogant way you want. Understood. :-)

Oh, excuse me. I just assumed that because you expect others to answer
your questions that the matter was somehow reciprocal. As to my godlike
status: it just seems that way to you because I took action and became a
ham and you did not. The way has been open to you for decades. You
just haven't done anything at all about it. I can see why I seem
godlike to you.

> Now, how does this proposed US ham band at 60 meters fit in with
> all the war hysteria and some wanting to run out and kill a raghead

> have to do with "pioneering the airwaves" that were already pioneered
> over a half century ago?

It really doesn't any more than your reaches on aircraft types or
professional radio. None of that matter much since if we do obtain a 5
MHz band (all duly experimented with by "professionals"), you won't be
using it any time soon.

> The fact that the "60 meter band" RM came into being so LATE in

No, I'll just be on any 5 MHz band the very first day it is opened for amateur radio use. What will you be doing?

Not really. Those who are perceived as doing something negative for
amateur radio aren't thought of too kindly. You don't need to worry
about acceptance in amateur radio in this lifetime.

I'm in Dallas, Texas. Everybody I know stopped worrying about
type acceptance a long time ago. It's just another scam to create
justification for bureaucratic jobs. People I know in business use
the same radio for their business comms, FRS, ham comms, etc.
Screw type acceptance. I wouldn't even give it a second thought.

Kind of reminds you of the arrogant Sanhedrin in r.r.a.p.
Just ask 'em a question, they ALWAYS have the correct
answer! They'll give you an answer even if you don't ask
them a question! Note how the Sanhedrin in this NG seem
to all be from the left coast. That says it all.

Correct that to read:

LPNs are not licensed to write prescriptions in the USA.

>>But in other parts of the world, that same person's LPN
>>license
>>may be honored as valid, and the LPN may be empowered to write
>>prescriptions.
>
> Hmmm...just an analogy, Jim?

Yep. Writing prescriptions is an activity that requirtes a govt. license in most countries.

>Otherwise here's the scoop on that:
>
> No one in the United States may write a prescription under an LPN
>license.
> RN's with postgraduate work and residency requirements may be designated

>Anesthesist)
>may write for some limited post-operative narcotics, but only when
>countersigned by an MD anesthesiologist.

Thanks for the correction.

My point is simply that a USA LPN license may be recognized by a foreign govt. as qualification to do things not allowed to that licensee in the USA. Same as ham licenses.

Provided one uses the allocated power, operates in a dignified manner and does not abuse the frequencies or fellow users, i.e. does not call attention to onesself, who is to know anyway?
I can point to several Volunteer Firemen in the area that use modified ham rigs for their fire freqs. because of the huge difference of cost between a Motorola and a 2-meter rig. These firemen, by and large, purchase their own rigs and operate on a limited budget. Is it legal? No. But again, who is going to be snooping into their personal vehicles to check?
Lets all be honest about this and admit that we Hams do the same thing. If we didn't, why are there so many web sites, including QRZ, that publish "mods"? I bet that there are a whole lot of Hams who have rigs that transmit out of band...such as the itinerant frequencies or the newly available MURS freqs. How many Hams have not at one time or another been tempted to tune to 154.570 and use the PL tone to "mess" with a MacDonald's kiosk or tune to 151.625 and mess with the local Target store?
Our area Baptist church uses 151.625 with no PL. God spare me the temptation.....

I dont give a crap what you think. You are a self-rightous piece of
dirt. Do you know what is going to destroy our hobby? Freebanders?
QRM'ers on 75m? Guess again. It's people like you, who want to keep
being a stuffed shirt. I've read some your stupid posts in the MURS
Yahoo group. You sure have a attitude dont you?

You and Larry Roll, think you can flaunt your self-rightous ARRL
attitude in this newsgroup, and get away with it? Think Again.

I'm the new kind of ham. No more CW. I dont mind having some rules
around. But enough to let people have fun.

I do apologize. It certainly was not my intention to sound abrasive in any
way. It just IS pretty hard to believe, IMHO.

> >Please correct me if I'm wrong, but aren't we are talking about

> Otherwise twenty five straight letters.

What's even funier is that if you do a little homework, you'll know that you
can count on a RST report, which is usually 589, and a rig of some sort.
Plus they give you a pretty generous amount of time after the code stops to
fill in (Best guess?) the characters you missed. So if you end up with:

"<sender's call, receiver's call> RS_ i_ 589. Na_e is Joh_. Rig _s Ken_oo_.
Ante_n_ i_ 3 e_e_ent _agi."

You've got approx. 10 min. (they say 5, but I swear we got 10.) to nail 25
out of the 59 characters (Minus calls.) in the example above. I stand
corrected at 25 correct characters in a row and I was unaware that the
numerals count for two as well. In the example above, you can miss both
opening call signs and still walk away from the session with a CSCE for
Element 1 based solely on common sense. I think we can all safely assume
that the thirteen missed characters (Represented by _'s.) are a
"no-brainer."

I do. It was actually the nicest, most politically correct, term I could
muster at the moment.

> Each radio
> service has a particular "basis and purpose". Ciotizens Radio Service was
NOT
> created as a "long-range" radio service...Just the opposite, it was
created as
> a low power, short range personal communications service.

I agree, but things change and this is what it's morphed into. I have this
quirky idea that the "Citizen's" Band should be defined by...you guessed it,
the "citizens?" To a point, of course. I too share the disdain for
overpowered and/or out-of-band ops, but responding to a natural phenomenon
using 12 watts P.E.P.? Puh-lease! (Not directed at you, Steve.)

> If you are going to say "short range", you have to draw a line
> "somewhere"! FRS'ers can call "1/2 mile" short range, and the SETI guys
might
> set "short range" in light years! It's arbitrary, but if you are going to
do
> it, then do it.

Again, things change. However, they should be changed vis the correct
legislative protocol, not just ignored.

> >> Wrong, code is a big factor in repelling potential "hams".

I'd like to see the numbers, "non-ham" NCI members, that is.

Why ask? :-)

Been there, operating that, some time back, then in the 1970s,
then in the late 1980s. Not in amateur radio, though. :-)

Had any experience below MF? Been there, too. Not in
amateur radio, though. :-)

Had any experience above UHF? Been there, too. Not in
amateur radio, though. :-)

I'm sure you will think up something not-nice to say about
"not having a ham license" in response. :-)

Had any experience telling the FCC what to do when they
don't have to have ham licenses? I'll bet you sure got after
them, huh? Think of it...the nerve, the gall, the chutzpah
of a government agency actually regulating US amateur radio
when none in that agency is required to have a ham license!

Tsk, tsk, tsk. :-)

I agree and disagree, Dick. You are right about those being negative, but I DO believe that someone who participates IN an AMATEUR RADIO forum SHOULD be doing something positive for it.

Nothing Lennie the Liar does is positive, as you (and anyone else in this forum with an eighth grade or better education or better) well know.

>> Tsk, tsk, who was it that wanted a "complete course in
>> microwave techniques" in here? For FREE.

Not a "complete course", Lennie. But you couldn't even come up with a bibliography.

Once again, the "professional" fails to even stand up among Amateurs, let alone be counted.

Leonard...starts with an "L"...just like...

Oh..HERE we go, Dave. Lennie made a snide comment when we were discussing marksmanship. He said "prove it" when my numerous Rifle Expert awards for "you know who" were mentioned. I offered to give him a personal demonstration. He clammed up.

I am sure THAT is the force to which Putzy One refers...Just like his Pagan Puffer Pal in the midwest tried to allude.

>> Now, how does this proposed US ham band at 60 meters fit in with

Just for clarification. :-} You seem as peculiarly interested in a 5
MHz band for ham radio as you are interested in amateur radio in
general. You're just here as an advocate for the removal....blah, blah.

> Been there, operating that, some time back, then in the 1970s,

If it isn't in amateur radio, why bring it up at all? :-{

> Had any experience below MF? Been there, too. Not in
> amateur radio, though. :-)

The U.S. does not have any amateur bands below MW. What has it to do
with the proposed 5 MHZ amateur band? :-{

> Had any experience above UHF? Been there, too. Not in
> amateur radio, though. :-)

Why, yes, I have--and lots of it. What has it to do with an amateur
band at 5 MHz? :-{

> I'm sure you will think up something not-nice to say about
> "not having a ham license" in response. :-)

"Not nice" depends upon your perspective. To you, it matters not
whether amateur radio has a 5 MHz band or not. It won't cause you joy
nor will it cause you angst. You can continue typing away at your
keyboard or watching TV.
> Had any experience telling the FCC what to do when they

> Tsk, tsk, tsk. :-)

I comfort myself with the knowledge that FCC staffers are paid to regulate amateur radio. You aren't paid by them nor do you regulate. It is much like your non-participation role in amateur radio.

>I dont give a crap what you think.

Just like Lennie the Licenseless, you wince at references to real-time,
real-world references that undermine your rants.

>You are a self-rightous piece of dirt.

Actually, a piece of clay, according to the Bible. Do you read the Bible,
Lloyd? You CAN read, can't you?

>Do you know what is going to destroy our hobby? Freebanders?
>QRM'ers on 75m? Guess again. It's people like you, who want to keep
>being a stuffed shirt. I've read some your stupid posts in the MURS
>Yahoo group. You sure have a attitude dont you?

Hmmmm....Let's see...YOU only show up once in a while, flinging insults
and innuendo in ALL directions when you DO "participate", and then have the
temerity to alledge someone else's supposed "attitude"

So to sum it up, we now have "Putz", "MiniPutz" and "Putzi-too"

Good company you keep.

>You and Larry Roll, think you can flaunt your self-rightous ARRL
>attitude in this newsgroup, and get away with it? Think Again.

"ARRL attitude", Putzi-too? You'll have to define that one. And YES, I
can "get away" with what ever "attitude" I care to demonstrate. The
Constitution and the lack of a moderator ensure that.

Unless you'd care to make a pit stop in Tennessee and try to exercise some
of that bravado in person?

>I'm the new kind of ham. No more CW. I dont mind having some rules
>around. But enough to let people have fun.

Gee, Putzi-too, I've been licensed for 30 years this October, WITH code,
and have had one hell of a ball all along!

>And your gear is? Bet your not any better.

I don't find any need to append it to my signature line, Putzi-too.

> Oh and I forgot. The JEWS made up the type-acceptance stuff! It's a
>JEWISH plot!

I'd ask you to provide some evidence, just like Putz and Mini-Putz, but I hate to see you stewing in your own spittle as you realize that you have none to offer and that in NOT having it, you will have made yourself more evident as a .....

Aw, hell, Jim, look at any of Dick's posts near the time of the WTC attack last year, and even some long into December as I recall. Some book Dick read taught him all about how evil all in the Islamic faith are...it was quite notable to see his comments concerning a whole population of people based on some (in my opinion) idiot author's opinion.

Caution not withstanding...Dick's comments in that time are indicative of his broad paintbrush and I choose to ignore the likes of discriminatory people.

I doubt you will convince Dick of anything but "nuke 'em all" --even as he chooses to ignore that the US, as well as many other nations, has committed many terrorist-type attacks on nations/people in its history. Each and every nation that has had capability of warfare in some form or another is guilty of horrendous acts against people. And each is justifiable only unto the nation who committed the act. The US is no different, the Taliban are no different.

My opinion.

If by "touchy-feely" you mean I try to remain compassionate toward other
people, then you are absolutely right and I am proud of it, Dick. You, on
the other hand, would be far more likely to be despised than I, by many more
people than will despise me--I would guess. It is my opinion, unscientific
though it is, that there are far more reasonable, compassionate people in
this world, than there are of your type.

I don't think it is actually 'illegal' to do what they are doing. I just don't like the attitude.

There are lots of folks out here that could help them. But it looks like they are to exclusionary to accept it.

Just an opinion.

I'll just concentrate on other area's and let them do their own thing.

Perhaps they really should be calling for stations
located "in the affected area", or "stations with traffic".
It's all how you present it. Their goal is to discourage
stations who are not in the affected area from overloading
the frequency. Unfortunatly it seems the NCS need a
tad more experience in high-volume NCS techniques.
K0IND was a class-A1 NCS station for many years
buy have not heard him lately. is he still around. Also
WA1KKP and K4RHL. Two YL's who ran the HWN
like professionals. I feel it's all in the training Dan. You need
to have alert and professional people running things on
any type of a high-volume radio operation who can
manage people before they key their microphones.
It can be done with some tact, but not many who've
mastered it, apart from air traffic controllers and similar
skilled individuals.

Actually that was Dave's comment Steve, but go ahead and consider it valid as my opinion as well. I'm sure Dave and I think pretty close to alike on most subjects, but particularly regarding Geezer the Putz.

And you are as entrenched in your thoughts, Dick, as they are. You would have a "fundamentalist" Islamic jailed or worse (my guess is, if given half a chance, you'd choose to have someone kill 'em all). And, to you, a "fundamentalist" would just as soon kill you. My guess is you're wrong on both counts.

>
> Nothing can ever
> trump their religious views, which are mostly developed upon illiterate
> individuals -the rate of illiteracy in that part of the world is
> startling- by the haranguing of radical Mullahs.
>

And, there are many in this world who are fundmentally illiterate who make wise choices and decisions every day. Your "fundamentalist" is no more opinionated than you, Dick. Have you ever thought of that? Are you as "upset" about other "fundamentalist" type groups such as the KKK, the Aryan groups, etc.? Are you as upset that Israel (because they are bigger/better/stronger because of their strong-arm tactics) are on the same mission as your "fundamentalists"?

>
> For them nothing
> stands in the way of Allah's will, even their own deaths, to a man.
>

And, if one were to read and truly take the Christian Bible to will and heart, they would live the same way. Who is the righter person? A person who lives and breathes the beliefs they swear to; or the person who basically gets to a church on Sundays and considers themselves blessed and "of God" because they listened to a sermon that day?

What?! A "fundamentalist" chicken out?! I thought you were pretty clear in
your opinion that chickening out would not be a trait to be displayed by one
of your "fundamentalists"?

>
> So when? What next?
>

I guess you are ignoring the continuous attacks in Israel and Palestine.
OH?! It is only the United States you are speaking of?

>
> Forgive and
> forget?
>

One cannot forgive without forgetting. I choose neither. But, I also would
rather not choose whatever level of response I am sure you'd be happy with.
You seem to support that it's OK if we (the US) go over there and just nuke
'em all. I think that makes us their (your "fundamentalists") equal.

>
> Hiroshima and Dresden didn't occur because we're mean and
> vicious.
>

Well, I can't speak for Dresden...I am not up on history that much.
However, Hiroshima *and* Nagasaki were both pretty mean of us. I shudder to
say that it netted the result that was no doubt needed, but it was still
darned mean.

>
> It occurred because our enemies had proven they would kill as

> many of us as they had to without hesitation-and had.

Oh? And Hiroshima and Nagasaki proved that we would not?

>
> Our leaders
> decided, very much in our best interests, that the way to prevent that
> was to win the war at whatever cost to the enemy that proved necessary.
>

And, the ironic thing Dick, is that your "fundamentalists" decided, they
believe very much in their best interests, that the way to succeed was to
win at whatever cost to their enemy. So, now what? I am not looking for
who was right and who was wrong. I am suggesting that all sides in a
conflict believe *they* are right--and all sides will respond in the same
way to their belief that they are right. Stomp out the wrong, correct?

>

Uh-huh, and as was just pointed out in an incredible movie "We Were
Soldiers" that Marine gunner did everything he did out of fear and kinship
with his fellow soldiers on that ship. How did the guy put it? I'll
paraphrase: Lt. Colonel Moore said something to the effect that soldiers
don't fight to defend their country, they fight to defend each other. By
the way, "We Were Soldiers" is an excellent flic.

> is close behind.
>

There is nothing "close behind" about the WTC attack. It was said "we are at war" and how noble of those who said it. "We" were not at war. The people who were in and around the WTC, the Pentagon, and on the plane that went down in PA, were not at war. Those people were victims of a senseless attack from a then unknown enemy. There was no "war" about it. That attack was stupid and senseless--but only because it netted nothing for the attacker, unlike the Hiroshima and Nagasaki attacks did for that attacker (notably, the US). It's hard to put it that way on the table, but to try and reach some level of understanding, to try and reach some beginning that will net a sensible response, the equality of the actions/reactions must first be realized. Someone always thinks they are right. Someone is always wrong.

I am not going to buy that you are right about all in the Islamic faith, Dick. I believe you think you are right. I think you are spinning your wheels to flame hatred and misunderstanding. I wonder if you'd like me smushed as well as your "fundamentalists." You seem to be just as rabid as they are.

>

>

There's loads of kooks in the world. It's sad to say, but what we experienced on Sept 11, 2001 is not unlike what many, many in this world see and live with every day. In my eyes, you are a kook, Dick. In your eyes, I am a kook. What should we do about that?

>

You seem to believe that the only thing to accept is the complete and literal elimination of your "fundamentalists." What should we do about that, Dick? You can't deal with the parallel.

> partly because of it.
>

You might want to get on that high and mighty horse, Dick. But that's the way it is, as they say. Instead of that high and mighty horse, what would you do? What would you have us do? The US has fed those we try to influence and lead for years; for years it is only the corrupt leaders who get that food and money; and for years we've been hated for it. I mean, after all, let's chop through all the bullshit and get at the meat of the matter. Do *YOU* really you effect that much change? Don't you think the majority of the population in this country is as pissed at you about the above scenario? Then, I ask, why does it continue? Why hasn't it stopped?

> > It's also appropriate to ask what changes Americans are willing to make
in

> >
>

Like I said, I'd be willing to figure that most of us US citizens are pretty pissed that our government spends/sends more over to foreign nations than they do on us here at home. So, why hasn't it changed? Maybe it's because we don't get *really* pissed until things like the WTC happen?

> Saw a snippet on the tube just this evening about buying your gasoline

Exactly. Good examples: The Taliban's belief that "we" (whomever their "we"
is) are evil incarnate. And Dick's belief that all Muslims are evil.

Guess we agree on one thing, Jim.

Then, you'd better get aware. I have had avowed Racists, tell me that even
I would have to eventually die when "the race war" begins. Why? Because I
believe in equality.

You've also never heard a good 'ol down-home KKK speech, have ya? It is in
the name of God that they believe the way they do, Dick. Next time you
happen to look at a speech being given by some Nazi-nut, look at the most
thumped on book.

Why would anyone WANT to "mess" with anybody? That has eluded me since I
was in high
school; it doesn't make sense. Mature, sensible people don't GET any
jollies out of that. The
behaviour, language, and lewd references I have heard both on the newsgroups
AND on-air
(and, yes, I'm talking about HAMS!) leaves me totally baffled and wondering
how supposedly

"grown" people can be that infantile, childish, AND stupid. It really is a shame, you know,
a real shame.....

Does anyone here really understand the need and reason behind type acceptance?

Many people stand to profit from type acceptance. Mostly the general public.

Here's a brief synopsis of why type acceptance is valuable.

When a transceiver is designed, there is a specific use and band(s) in mind. To operate in this/these bands the unit must pass certain engineering rules. Not the least of which is minimizing the amount of harmonics and other spurious eminating from the unit. To accomplish this, a careful selection of mixing circuits, frequencies and filtering are employed in the design.

Most often the design that works in one band or group of bands does not prevent harmful garbage from leaving the unit when the unit is operated on frequencies for which it was not designed. It may have a good rcvr and power on the out-of-band freq but now the filtering and other design imperfections are allowing harmonics and spurious to leave the radio.

Should the spurious and/or harmonics end up on or near public safety or aircraft frequencies there could be a problem. If the garbage shows up on say a paging or mobile data channel it causes a certain amount of inconvenieince.

It's very difficult to predict which freqs can or should be used for mixing processes to minimize problems both inside the radio and externally.

So, by sticking to type accepted radios and the designed operating parameters we all stand to gain.

Very well put.. Thank you.....

AND, for the "ham" who likes to "mess" with people like McDonalds, Police, etc, he does NOT speak for - nor represent the majority of us. I take exception to being classified in the same category. I value my Amateur as well as Commercial Licenses for the effort put forth to achieve them as well as to uphold them. It is a pity some others DON'T. It's people like that - who screw things up for the rest of us. THAT is what brings regulations in.

Same as
> ham licenses.

Agreed. Also, unless things changed, military medics prescribe/dispense
medications to military personnel that would, in many cases require
a doctor. This, again, goes to the point that the military operates in
a different space regarding legalities that in the civilian world require
special licenses.

I suspect the FCC doesn't care nor intend that to address
any terrestial land area that constitutes a soverign foriegn
country...regardless of the lack of a "foriegn
administration".

> That is you operate under FCC authority, and hence under Part 97 rules,

But if I operated as T5XYZ, just how would the FCC know?
More that the FCC really wouldn;t give a dman, much less
have sufficient proof to take any action. The practical/pragmatic
response from the FCC would be no response. That may not
be what some would like, but that's the likly scenario.

Cheers,
Bill K2UNK

Your analogy makes no sense. How does the FCC
know anyone offshore is operating without the proper
aprovals? Has ANYONE ever been asked by the FCC
to justify their foreign operations from non-US
territory?

Cheers,
Bill K2UNK

This is
> what is making Ham Radio "appliance oriented".

The thing that has made ham radio "appliance oriented"
has been the great strides in technology and miniture/micro
electronics. Even an engineer can't duplicate the bells,
whistles and performance of typical ham gear today.

Can anyone build their own HF transciever to the specs
that we get from commercial gear? Ditto for a VHF
HT or mobile rig?

Cheers,
Bill K2UNK

Don't bet on it. If he is still under the influence of the drug and, enroute back to his military unit but while still in the civil world, he commits a crime while in that condition, he can easily be prosecuted for the crime as a drug offender, and even prosecuted as being in possession of a controlled substance. In his bloodstream. It has been done.

Lets see:

> CB
We already have a sewer of illegal gear on CB now.
You want more of the same?

> FRS, MURS

We don't want another CB debacle, hence the need for type acceptance.

> Ham?

Ham equipment is NOT subject to type acceptance (other than a specific
case for 10 meter HF amps).

> I personally don't see the problem with people using their dual-band HT's
> for FRS or MURS.

They don't meet the rules, that's why.

> A lot of people do it. As long as you keep it in the
> power and antenna limits, not even the FCC would care.

It is NOT only power. FRS does not allow external
antenna connection (i.e. FRS requires the antenna be integrated
into the type accepted unit). Every HT I've seen allows
external antennas to be substituted for the "rubber duck"
HT antenna.

> We have other things to be concerned about.

So do I, that's why I leave such things to the FCC.

Cheers,
Bill K2UNK

But ham radio is not one of them. A licese still must be issued by the
FCC or other competent authority as the circumstances dictate. Verbal
permission is not a license to operate. It's almost a dead certainty
that no military commander is authorized to issue permission for anyone
not otherwise licensed to operate, and it is also assured that he is
required to confirm that license exists before issuing the permission.
The permission will be in writing. No "OK, go ahead" will suffice.
Also, military personnel are subject to the same civil law as any other
citizen when not on a military base.

Dick

Bill, the Uniform Code of Military Justice IS "US" law. It's just
applicable to a very narrow part of our society.

Prosecuted by a civilian court? Dick, I have NEVER read of anyone
being charged with "possession" based ONLY on a blood test.
Maybe the military would do that, but no civilian court would.
Please cite specifics if you know of any.

Cheers,
Bill K2UNK

No, Bill, yours doesn't. What your say is that if there is no
prosecution there is no offense. People get away with illegal activity
all the time. That doesn't make it legal.
```

Well, you see. I guess it would depend upon a lot of definition, Dave.
What if I worded thusly: the US has committed terroristic attacks on its
own nation and people:

How 'bout these for example:

Tuskegee syphilis experiment (easy enough to look up):
http://www.infoplease.com/ipa/A0762136.html
The deliberate failure to treat a group of male Negroes in Macon County
(near Tuskegee), Alabama who had syphilis begun in 1932 and ended, by
unfavorable publicity, in 1972.

Or, even easier to lookup: the many historical accounts of A-bomb
experimentation while telling our military folks that "it's OK"

Or, how 'bout LSD testing by the US Army--know you've got to have heard of
this one even if your head has been in the sand.

Or, let's not forget this: "The shaft of light Hazel O'Leary has shone into
the darkness of the nuclear establishment's human experiments has revealed a
reality as awesome as the first secret, blinding flash of the atomic
explosion in the New Mexico desert on July 16, 1945. It was a stunning
admission. For the first time, the head of the nuclear weapons establishment
was admitting that government agencies had conducted secret, dangerous, and
assuredly immoral experiments on the American people.." That's a direct
quote from the Bulletin of the Atomic Scientists, I think 1994.

Oh, the examples go on and on. And that's just what's been going on under
our noses.

Do I think those examples and others like them are terroristic? I withold
opinion. You decide for yourself. Does it bring home my point that
perception is everything? I think so.

Well, then. Suppose you tell me what the reality was with the examples I've given above. And, if you're honest with yourself, you know there've been more. And, the ones above are but a few of those we *know* about. What about those we may not?

I thought that as birds of a feather, you'd have learned to flock. Alec
was supposed to have the moving van arrive after the presidential
elections and you vowed that you were gone from this venue.

> As to myself, much to your chagrin...I'm
> wherever I choose to be, Dave.

I'm not chagrinned, Kim, only amused that you and Alec forgot your vows.

> How 'bout you? How's the silver spoon?

Never had one. I've quizzed you about the comment several times but
you've never come up with a real response. I wasn't born with one.
Perhaps my parents picked it up second hand.

So, why is it that you feel called upon to comment on those people which
claim that you choose to ignore?

The USG did not infect the men with syphilis nor did it go about
spreading syphilis as a means of instilling terror. That a moral wrong
was done is not argued. That you once again don't know what you're
babbling about is argued.

> Or, even easier to lookup: the many historical accounts of A-bomb

How did the U.S. experiments with the atom bomb turn into terrorism?

> Or, how 'bout LSD testing by the US Army--know you've got to have heard of
> this one even if your head has been in the sand.

How was LSD used as a means of instilling terror, Kim?

These are decidedly not examples of the United States Government's use
of terrorism. You're all wet.

> Do I think those examples and others like them are terroristic? I withold
> opinion.

How the hell can you withhold opinion? You've provided them as (faulty)
examples to prove your (faulty) point.

You decide for yourself.

I have. I've decided that your statements were idiotic.

> Does it bring home my point that
> perception is everything? I think so.

Yeah. Something perceived by an individual with no understanding of a
term can lead to some really stupid statements.

No, those silly examples are not terrorism, only moral wrongs. So find us some actual examples if you can.

So, by your own admission demonstrated above, terrorism is morally right and
acceptable. I see.

Kim W5TIT
If something that is morally wrong is not terrorism, then what is it? Just
a bad? Just a teensy bit wrong? Just a little bit hurt? Only one directly
affected? Ten? Thousand?

No, Kim. There is a definition of "terrorism". Your examples do not
meet that definition.

> > >
> > > How 'bout these for example:

Yeah, I know. You condsider it terrorism. You don't understand the
word.

I believe the part in which you state, "Gosh. I don't know, Dave." I
not only think that this doesn't meet the definition of "terrorism", I
know it does not.

> > >

Okay, Tugboat Annie, farbeit "from" you. Your example still doesn't
meet the definition of terrorism.

That's a good thing, Kim. You aren't capable of explaining it.

> It's not up to me to
> justify or not the actions of the US government.

Right again.

> As said, one man's
> ________ is another man's __________. Your blanks are obviously different
> than mine.

Allow me to fill in the blanks. In the first one, you can insert "dizzy
wife". For the second one, use "empty-headed queen of the tacky".

> > >

Either they are your opinion or they are not. You provided the items as
supposed support of your position. In one place you use "my opinion".
Later you tell us that you "withold" opinion.

> >
> > You decide for yourself.
> >
> > I have. I've decided that your statements were idiotic.

Where have I ever claimed not to make a judgement? I've stated here, on
more than one occasion, that we are called upon to make judgements each
and every day of our lives. You've even argued with me over that issue.

> > >
> > > Does it bring home my point that

There's you. Then there are the thousands of others. I've seen no
support of your simple statements from "thousands of others". You have
a family of field mice in your handbag?

How can you possibly read that into anything I've written, Kim? This
latest conclusion is as dumb as your conclusions about what constitutes
"terrorism".

> If something that is morally wrong is not terrorism, then what is it?

It is a moral wrong. If I pee on your flower garden, it isn't
terrorism. If you steal a candybar, it isn't terrorism.

> Just a bad?

A bad what?

> Just a teensy bit wrong? Just a little bit hurt? Only one directly
> affected? Ten? Thousand?

Save us both a lot of bother. Look up the word.

> Give the cbers a chance, they will screw up FRS and MURS just like
> they did the cb band.

That is a blatant assumption and you cannot support it with any
reasonable arguement. CBers are quite happy on (and near) 11 meters;
there's no skip to shoot on FRS or MURS, the range is simply too
limited, and so are the radios.
```

Well, you're also a person who lives by the book, Dave. I don't in most
cases. Your book definition of terrorism only touches the surface of what
terrorism is--in my opinion. I consider that selling illicit drugs, growing
drugs for the black market, and using drugs are terrorism.

>
> Yeah, I know. You condsider it terrorism. You don't understand the
> word.
>

Dave, I quite understand what terrorism is to me. And, how quaint of you to
decide that my definition of terrorism is negated because you don't think
the same way. I consider rape on a woman a terroristic act.

>

Well, that depends. Let's just say that maybe as a child my father pee'ed
on me whenever he felt like. It absolutely horrified me and it causes the
response of sheer terror in me now to realize that you are outside peeing in
my flower garden. Maybe, because of the effect of my father's actions, your
peeing means a threat to me. Is that terrorism to me? By the way, I don't
think the examples I gave affected only the direct victims of those actions.
However, you choose to close your eyes like you wish to do.

>> The problem occurs for non appliance operators, when the appliance
>>operators impose code requirements.

The code test requirement is a result of international treaty. I support it,
and there's no way I'm an appliance operator.

>>There are many Ham clubs and there are very few clubs
>> dedicated to radio technology.

That's because a person doesn't have to be technology-oriented to be a ham.
Blame the easy written tests for that.

Many hams I know are public-service oriented, or socially-oriented, or
operating-oriented. And all of them are "real hams", and a benefit to the ARS.
To them, the technology is just a means to an end.

>>The technical people go to a Ham Radio
>>meetings, see that Ham Radio is appliance oriented and don't join.
>>The ones that stay are
>> the ones attracted to appliance operation and Morse code to begin with.
>>This is
>> what is making Ham Radio "appliance oriented".

Not true. The two issues (Morse code and appliance operating) are unconnected.
In fact, if anything pushed amateur radio towards the appliance category, it
was the widespread adoption of manufactured SSB transceivers.

There has been a nocodetest ham license here in the USA for 11+ years. Lots of
hams hold that license. Have they brought about a technological revoulton in
ham radio? No.
>
>The thing that has made ham radio "appliance oriented"
>has been the great strides in technology and miniture/micro
>electronics.

That's part of the story. The other part is the cost reduction brought about by
modern manufacturing methods. In terms of inflation-adjusted dollars, ham radio
gear keeps getting less expensive for the performance delivered.

Texas Towers is advertising the Yaesu FT-897 for $1049, HRO for $1029. Which is
$300 less than the chatter mills were predicting. Bolt-on ATU is another $220.
12 ham bands plus a DC to 440 rcvr in a (reasonably) compact pack 'n go

package. And that's just one example.

Add to this the time to design/build, the test equipment and tooling required, and the near-zero resale value, and it's clear why homebrew rigs are relatively rare.

>Even an engineer can't duplicate the bells,
>whistles and performance of typical ham gear today.

Two engineers in California have produced rigs that are competitive with the manufactured competition. They sell kits of their designs. Great rigs, but a niche market.

>Can anyone build their own HF transciever to the specs
>that we get from commercial gear? Ditto for a VHF
>HT or mobile rig?

Some can, Bill - it all depends on what specs are considered important and which aren't. But that's not the main point. The selection of new and used ham gear today is so wide, and the cost so low, that even technically-minded hams have a hard time justifying the time and money to homebrew a rig from scratch. Those of us who do design and build rigs are building rigs that are not like the stuff on the market today.

What ham rigs has "vshah101" built? Can they compare with, say, the FT-897?

Your right, of course, Ken. I totally agree it is a matter of training. In the past I have had experience in high stress, high volume, radio circuits. It's not easy...expecially in the more relaxed Amateur Radio invironment.

I don't mean to chastise the HWN. Just some observations I had at the moment.

All in all they do an excellent job.

Not quite. Just because no faction in Somalia could get its act
together and find its pockets in the dark with both hands does not
mean that Somalia is "no man's land".

For practical purpises, under international law the last
fuly-notified government (notified to the UN and its specialized
agencies, to other governments, etc) is "the government" unless a
new notification is presented - or so I'm told.

Looks good on paper, but in the field, forget about the rules.

> It's almost a dead certainty
> that no military commander is authorized to issue permission for anyone
> not otherwise licensed to operate,

Agree, but read my commentabove.

> and it is also assured that he is
> required to confirm that license exists before issuing the permission.

And just what specific rule requires that?

> The permission will be in writing.

And just what specific rule requires that? When we were at sea, the captain
aksed one of the hams if we could get up a phone patch, he din't ask to
see anyone's license and he didn't put the "permission" to operate
one of the ships HF units as a ham station in writing either.
What "rule(s) can you site as being violated?

> No "OK, go ahead" will suffice.

As above, looks good on paper, but reality is another thing.

> Also, military personnel are subject to the same civil law as any other
> citizen when not on a military base.

Not if they are actively engaged in a military excersize.

Personally, in my opion, the military command has the authority to
do pretty much whatever it wants in such cases. Additionlly, I
would argue that there WAS a soverign administration in Somalia
that has/had authority to administer radio rules. the fact that it
didn't or didn't care doesn't make it non-existent.

Cheers,
Bill K2UNK

If there is 100% liklihood that no one is going to be
prosecuted, then the question of legality is moot. Makes
for nothing more than an academic excersize in futility.

People get away with illegal activity
all the time. That doesn't make it legal.

Maybe not, but as I said above, no prosecution and the
legality becomes a non-issue.

A stunning justification for type acceptance.

Cheers,

Just wait, the cbers will be using modded radios with "leaners"
and other splatter boxes on the FRS and MURS frequencies. To them
it will be just other bands they can get on and make a sewer pit
out of just like 11 meters.
```

It's 100% legal for hams to mod type-accepted radios so that they can
operate outside the ham bands. It's not only legal but is encouraged
and supported by none other than the U.S. military. To wit MARS and
the CAP. Also, I believe, to get on the inter-service 5mHz Alaska
Emergency freq.

The dictionary exists in order that individuals might communicate. If
I'm talking about roast beef and you think I mean something about
burning cattle alive, we begin to have problems. Terrorism is
terrorism. If you'd like, search for a word which communicates what you
mean to say. That word is not terrorism no matter how much you'd like
for it to be so.

> >
> > Yeah, I know. You condsider it terrorism. You don't understand the
> > word.
> >
>
> Dave, I quite understand what terrorism is to me.

It doesn't matter what terrorism is to you. Terrorism is terrorism.
You need to get on the same page with the rest of the English speaking
world.

> And, how quaint of you to
> decide that my definition of terrorism is negated because you don't think
> the same way.

It isn't quaint, Kim. It's reality. It doesn't matter what you think,
the definition is what it is. If you mean something else, write that.

> I consider rape on a woman a terroristic act.

Whatever.

> No, Dave. You read your book. buhbye now.

Your "don't bother me with no facts" pose is noted. I have been reading
my book--David Brinkley on Washington during WWII.

Thats the second time I've heard about race wars lately.

NPR had a nice piece a couple of weeks ago about the Black Panthers
urging the black community to arm themselves for the upcoming race
wars. Maybe reparations will fund the armaments and munitions depots.

Dave, the "definitions" of things are why the law profession exists, why
there are debate clubs, why there are discussion groups, and why many
corporations today include diversity training in their repertoire of things
that employees must endure.

Sorry, in my eyes it is terroristic to strike terror in the heart of
anyone--singularly or in multitudes. So, no matter how much you think I am
wrong, wish me to be wrong, will me to be wrong, I am right as far as I am
concerned.

Tell ya what. Just so we can get back into your comfort zone, Dave, how
'bout just the Hiroshima and Nagasaki bombs that were dropped? Eh? Was

that terrorism? Yeah, I think it was. It was a terroristic response to a terroristic attack on Pearl Harbor.

> > >
> > > Yeah, I know. You condsider it terrorism. You don't understand the

You make this sound as though this is a personal vendetta of mine or something. You need to start reading more than your Christian right magazines and listening to more than your Christian right talk-shows. In fact, my train of thought on this has turned in recent weeks due to the discussions I've both listened to and to those that I've been involved with.

Dave, you know what? The only thing I ever see you do when your buttons get
pushed is attempts to try and belittle. You never speak to fact, you speak
from the same perspective that all of us do--opinion and impression. If
books are meant to clearly define and set in stone the meanings of things,
then why do we bother with such institutions as the Supreme Court, the UN in
this example. It is not beyond the realm of the UN to determine that a war
on Iraq is nothing but a terroristic threat from those who attack it. Think
they'll be using your little dictionary when they try to decide? Think the
rest of the world will grab the dictionary? In what language should they
look the definition up?

You haven't provided one fact, Dave. I've never seen you provide facts--only pontification and innuendo. The book you're reading is someone's opinion of facts that occurred during WWII. You'll probably take David Brinkley's opinion as fact--you are so impressionable.

All part of the picture.

Here's proof: Pick out almost any current ham transceiver. Then dig up a ham mag or catalog from the past. Figure out what the price of the current transceiver would be in inflation-adjusted dollars in the year of that catalog or magazine. Then see what that number of dollars would buy.

Or play the game the other way, and equate the prices of the past to today's dollars.

>> Texas Towers is advertising the Yaesu FT-897 for $1049, HRO for $1029.

>>a niche market.
>
>But even that niche (Ten-Tec?) doesn't economically compete
>with the HF rigs you mention above if you want full covergae, etc.

The company is not Ten Tec. And the rigs do indeed compete in almost all specifications and features. In fact, on some specs they are superior to rigs costing much more. I bought and built one, and it does everything claimed.

But comparing the 'price' of such rigs to manufactured ones requires that you ignore the cost of your time to assemble them. In my case, I count the assembly time as educational and fun. Also, I can fix anything that goes wrong and modify the rig if I so desire.

Main point is that hams today don't have to do much technical stuff if they don't want to.

>> >Can anyone build their own HF transciever to the specs

>> >HT or mobile rig?
>>
>> Some can, Bill - it all depends on what specs are considered important and
>> which aren't.
>
>Agreed, and my comparison includes cost and SIZE of the finished
>product.

The rigs I speak of are very small. And beyond a certain point, miniaturization is a detriment, not an asset, because the rig becomes hard to use and impossible to work on.
>
>> But that's not the main point. The selection of new and used ham
>> gear today is so wide, and the cost so low, that even technically-minded
>>hams
>> have a hard time justifying the time and money to homebrew a rig from
>>scratch.
>
>Exactly...we are in violent agreement : -)

HAW! violent agreement - gotta remember that one.

There's a wider issue here. The availability and decreasing price of manufactured ham gear has effects beyond the 'appliance operator' situation. They also make it possible for a wider range of people to be hams.
>
>> Those of us who do design and build rigs are building rigs that are not
>>like the stuff on the market today.
>
>I've seen nothing that would suggest a need for those rigs.

They are needed by those of us who want them, and who are willing to build them.

>Just how are they "not like the stuff on the market
>today" in any positive sense?

In my case, I wanted specific features and performance in certain areas, and I didn't care about other features and performances. (This was before I bought the kit mentioned above). The manufactured rigs that did what I wanted cost a fortune. By homebrewing I was able to get what I wanted for a lot less money. Also, I am able to work on the rig myself. That's worth a lot - to me.

And they don't allow MDs to write prescriptions for themselves, at least in
NJ. They don't want doctors prescribing narcotics for themselves for
obvious reasons..... Though I hear some anesthesiologists save the
leftovers from operations for themselves....
```

Diversity training exists because of definitions? The practice of law
exists because of definitions? That is preposterous.

> Sorry, in my eyes it is terroristic to strike terror in the heart of
> anyone--singularly or in multitudes. So, no matter how much you think I am

What about the thousands of others? Did they evaporate? If you choose
to apply a different definition than that provided, of course you can be
right as far as you are concerned. You just can't sell your ideas to
others based on your misuse of the definition.

> Tell ya what. Just so we can get back into your comfort zone, Dave, how

No, I don't believe this is a vendetta of yours. I pointed out your
misuse of a word and your revelation that you don't even understand or
care to understand its meaning. I don't read Christian right magazines
or listen to Christian right talk shows. I listen to and view a broad
variety of news and commentary programming and I read a variety of
magazines. To this point, I've heard no one nor have I read any
articles by anyone espousing the peculiar definition of terrorism you've
chosen as your personal standard.

Well, for starters we have the fact that you ignore the dictionary
definition of "terrorism" and there was no innuendo in my calling you a
ditz.

David Brinkley was a noted newsman. The book does not deal with
opinion. It deals with fact. It is about real people, real places and
real events. I'm really impressionable when it comes to factual
information.

Hi Kim.

It isn't unusual for people to try to extend definitions to attempt to emphasise something that they themselves find repugnant. Your rape analogy is an example.

Rape is a vile and repugnant act of violence against women. But it is hard to turn that into terrorism.

There are plenty of people who are nearing retirement and are truly terrified that they won't have enough money. It could be argued that the forces governing the fall of the stock market are terrorism? Perhaps the execs from Enron or World.com could also be charged with that.

I was recently watching a program on one of the news channels (does anyone beside me find that the news channels are starting to resemble tabloids?) where a woman was trying to make a case that the west nile virus was an act of terrorism!!!!!!

What I'm trying to say is that a crime is a crime is a crime, and if you try to extend a trendy name to it, you end up diluting it.

Just something to think about.

Right. Anyone who is assembling a kit to save money is not getting the
picture. It's nice to learn something about how the radio works, and
familiarity with the assembly of a unit is indeed an advantage for
troubleshooting and modding the unit

Looking at the band charts, maybe the 70cm band, or higher would be a place to have an expansion of one of those bands, as well as/or possible expansion by .25 or .5 addition to some of the HF bands.

Locally speaking only, 220 is only used for linking/remote reciever type of apps. There just is not enough transcievers available anymore to make me consider getting on that band, unless it is a bundled multibander. Locally speaking 2 meters is the only used vhf/uhf band... 6 is popular during openings and 70 is used for "some" repeaters and linking but otherwise dead like 220.

Right now, I have like about 15 minutes total time to operate on the average day, so I guess I am adding to the lack of usage on selected bands.....

> Right. Anyone who is assembling a kit to save money is not getting the
>picture.

I disagree, Mike. It all depends on what the person's situation is.

For example, some hams can easily pick up extra money by working extra hours.
For those folks, time spent assembling a kit could be spent making more money
in order to buy a manufactured one. If a person's take-home pay is, say,
$10/hr, then 40 hours spent assembling a kit equates to $400!

Other hams may not be able to make extra money that way, for a variety of
reasons. Others may not be able to make large lump expenditures. For them, the
kit route can make a big difference.

The rigs cited above are somewhat modular in design. The base rig is the
biggest chunk of money and time. Desired options can be added later, as money
becomes available.

>It's nice to learn something about how the radio works, and
>familiarity with the assembly of a unit is indeed an advantage for
>troubleshooting and modding the unit

For some of us it's almost a necessity. And as far as cost goes, check out what
it costs in time/money/shipping/aggravation to get an out-of-warranty
Yaecomwood rig fixed.

Credit K2UNK with the 'violent agreement' phrase!

Bill's point is still valid, tho. Homebrewing and even kitbuilding are niche activities compared to simply ponying up the cash and buying a manufactured rig, new or used, outright. The exceptions prove the rule.

>Diversity training exists because of definitions? The practice of law
>exists because of definitions? That is preposterous.

I think what Kim is trying to say is that people disagree over definitions.
Much of what lawyers do is to argue over what a law means. However, what Kim
fails to note is that standard definitions do arise out of the discussions. A
lawyer who defined "real estate" as "any property that is not imaginary" would
not be taken seriously.
>
>> Sorry, in my eyes it is terroristic to strike terror in the heart of
>> anyone--singularly or in multitudes.

The other day I was driving down the main street of my town. A police car came
out of a side street behind me, hit the lights and siren. I was terrified for a
few seconds - then the police car zoomed past, answering a call to an accident.
(I found out about the accident later). By Kim's definition, the police
committed "a terroristic act" on me.

>> So, no matter how much you think I am
>> wrong, wish me to be wrong, will me to be wrong, I am right as far as I am
>> concerned.

But only as far as you are concerned.

>
>No, Kim that wasn't terrorism. I don't care if you think it was.

Act of war. Actually saved millions of Japanese lives, because they would have
fought almost to the last man, woman and child. The invasions of Saipan and
Okinawa were a hint of what invading Japan would be like.

>> > > > Yeah, I know. You condsider it terrorism. You don't understand the

>
>No, Kim. Freedom of expression is not all about the misuse of a word by
>application of a homemade definition.

To Kim it is. It's part of her definition of "freedom of expression". Example:
the rest of the world can define dogs as mammals, but Kim reserves the right
not to be governed by that. Her "freedom of expression" permits her to define
dogs as reptiles if, to her, they appear to be reptiles. Or if doing so ticks

you off.

Agreed...the key is "prosecution" vs wink of the eye. For all intents
and purposes, the defacto "wink of the eye" on highway interstates
is about 10mph...and usually even more. Seems the cops have no
shortage of 20+ takers and don't need to feed on the 10 over or less.

>Rape is a vile and repugnant act of violence against women.

As an ER Nurse, Mike , I can tell you emphatically that rape is vile and repugnant. However it is a vile and repugnant act perpetrated against BOTH genders. More one than the other to be sure, but to both none-the-less.

Recent "Politically Correct" social engineers have been loading the ER up with "violence against women" posters and where women can call when victimized.

There are no such outlets for men. If a male person seeks shelter, or needs a shoulder to lean on, or is himself victimized by his "domestic partner", he is, at least, out of luck. At worst he's laughed at, humiliated, or worse...winds up himself incarcerated.

I have had male persons arrive in my ER for mental health evaluations who cited phone calls to various 1-800 domestic violence hotlines only to be laughed off the line on occassion.

Of course, if, after having sought care or counselling for what ever percieved dysfunction or aberation he suffers, and having been so dismissed by "the system", he subsequently "loses his temper", HE will be the one arrested and incarcerated.

>What I'm trying to say is that a crime is a crime is a crime, and if you
>try to extend a trendy name to it, you end up diluting it.

My opinion exactly on "domestic violence". It's violence or it's not, regardless of where it occurs and against whom it occurs.

>Just something to think about.

I have been...!

Something unusual, I find myself agreeing with Phil for the second time this month! Yes, that was the thinking which was passed on to me by two earlier generations, owning and operating a xmitter was an earned privilege. Many explanations and theories have been bandied about as to how and why we are the state we are in today. However, none of that changes the fact that in 1959, when I walked out of the FCC office in NYC, having passed my tests, I thought I had just earned the most treasured privilege in the world! Moreover, a treasured privilege to be protected by obeying all rules and regulations to the letter. As you say, just another old curmudgeion reminiscing about what was. A parting thought, I thought the FCC official who administered my tests, attired in his neat business suit, had to be the most impressive government official on earth and one to be emulated. Unfortunately, I was mistaken, but that's another story not for telling here.

I think I know who that was you are talking about. Think he
got canned by the FCC because he was spending too much time with
ham matters and neglecting work needed for other radio services.
And there were rumors, but that's another story not for telling here....

I'm not predicting it, Larry. And I'm not predicting that we'll be
under one world government in 2027, either. But we could be. How
many years did it take us to go from colony status to sovergn nation
status? How many years did we have to suffer through incentive
licensing?

Sometimes the really big stuff takes only a few years, and the silly
stuff hangs on forever and ever.

There's also limited use and access to 219-220MHz. Digital modes only,
and we are secondary. And we have to get permission from the primary
users (AMTS) and they usually go into CYA mode and automatically
say no.

Why? There's no reason for linears on 462 MHz; there's no skip. Just
another of your unsubstantiated assumptions. You have proven yourself
to be a moron. Take a seat at the head of the class, dimbulb.

If I remember correctly don't some countries require that one of the
stations MUST be a mobile unit, and that base to base com's are
prohibited by law?

Ok, I'll use your same exact science there are only 1.2 million Cbers in this country.

> > >CBers are quite happy on (and near) 11 meters;

> > Says who do you now speak for all Cbers? You certainly are not a ham If you

You know what my call is right? And I know your not the amazing kreskin so evidently it get's posted. Now so what is your call? Or do you prefer to remain anonymous and claim your a Ham, which you have proven you make claims with nothing to ever back them up. Anyone can say there are pink elephants running wild on Jupiter, using your "mentality" prove me wrong.

> Like your's does your posts? You're just another anonymous troll here.

How am I anonymous? You know my name and call you know location how can you say that is anon? You also bragged you have nothing to hide you do remember that post you made right? Or would you like a repost of it.

> > > there's no skip to shoot on FRS or MURS,

> > Shooting skip past 155 miles on Cb is Illegal do you condone Illegal acts?

> I believe it's impossible not to break some laws, including that one.

Un Intentionaly speaking with someone and not knowing there location is one thing to reply to or put out a call for skipland is knowingly breaking trying to break the laws no matter how you want to twist it. Planting your dial on 27.555 and making contacts is Illegal as per the FCC, I would call that willful intent, knowingly calling cq dx which illegal op's are doing is soliciting people who are in the distance. Sorry, ground wave doesn't travel 155 miles

> You got a problem with that, Georgie-girl? Tough nookie. So what?

Sure do Dick Head, because it is another assinine comment coming from your keyboard.

Quite correct, Leland. Particularly in Europe. Of course there are still a
few countries that have 11-meter amateur allocations (Insignificant though
they may be.) as well as those with no distance limit on their 11-meter CB.
(England comes to mind.) Take care now.

Wow, Phil - you hit that one on the head. I remember going into the Buffalo, NY, FCC office on a number of occasions. The first time one walked into that place, your palms would be sweaty. Yes, it was a rare privilege to be allowed the use of a transmitter - and EVERYONE respected the FCC (well, there were a few, but they got popped in a heck of a hurry - there were a lot of monitoring stations back in the 50s and 60s). Yet, eventually, they became friends (still, you respected the heck out of 'em!). I remember when I had taken my 1st class radiotelephone and about 1 week later I had a letter for me from the Buffalo office. What the heck, too early for the ticket what could it be (and I still remember the little note about 'official business' and if one used it for personal use, there was a pretty hefty fine - seems like it was $300 or $500)? It was a note that started 'Dear Jim, it seems you left your red sweater in our office. Shall we send it, or will you call for it?'. Unbelievable. I was going to Buffalo for a pre-induction physical (Vietnam) so I dropped in at the office. There was no identification in that sweater! They remembered me. Made my day ;)

Like Dan was saying, basically little ham use in that band area period.
Still possibly thing and exchange for frequencies would be a good idea, but
the hard part is getting both sides to agree in that matter.

In those days only three types of people owned transmitters -
licensees, soon-to-be licensees (owning but not using the
transmitter), and "bootleggers". It was considered a privilege
to be in the first two categories and a "no no" to be in the
third.

It may have been "considered" a no-no (third case);
the question, however, was... if "owning"
constituted any violation?

I say it didn't.

Cheers,
Bill K2UNK

>using 12 watts P.E.P.? Puh-lease! (Not directed at you, Steve.)

The basic problem is that the FCC erred by putting cb on 27 MHz back in '58.
They put it there because UHF CB had not gotten much use, even though it had
existed for more than a decade.
>
>> If you are going to say "short range", you have to draw a line

FCC has already done so - 155.3 miles. (I think that works out to 250 kM).
>

That's because the main causes of slow growth in the ARS are things other than the test requirements.
>

>>Commission
>> administrative action.
>
>Good point.

Add to that the fact that for 2-1/2 years now, the FCC has been renewing all Tech Pluses as Techs. If no other changes are made to the rules, in 7-1/2 years there will be no Tech Pluses at all.

Also note that any Novice who passes new Element 2 gets a Tech.

Even before restructuring, a sizable number of hams in the Tech totals were actually Tech Pluses.

Thus, it cannot be assumed that all Techs have not passed code tests.

Of course the code test itself will most probably go away in less than a year.

If we are asking for more spectrum elsewhere, how about 4m (70MHz). This band is allocated to hams only in European and Middle Eastern countries, but would be interesting to have here.

EMERGENCY COMMS: NEW DATABASE BEING CREATED

A new ham radio volunteer database is about to become a reality. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how an act of terror lead to its creation:

--

A year ago, when al-Quida terrorists hit in New York City, Pennsylvania and Washington D-C, it was Joe Tomasone, AB2M, who put together an Internet based volunteer registration system. This strategy permitted ham radio volunteers to be quickly credentialed and dispatched to the various disaster sites where they were needed. Last May at the Amateur Radio Newsline sponsored Ham Radio Town Meeting in Dayton Joe explained that the database came about because he wanted to do somthing to help in the wake of the attacks:

--
Tomasone: "Not knowing what else to do I sent an e-mail to Tom Caruba, KA2D, who is the Section Emergency Coordinator for the New Yourk City and Long Island. I said that I know there is nothing that is nothing I can do to help, but let me know if there is somthing I can do to help.

And I expected that maybe he would request for me to make some phone calls or do some health and welfare traffic outside the area because the phones were in scetchy status in the New Yoork City ares. A short time later a request came back that I wasn't sure how to answer. They asked: '...can yoiu make a databse that will track the hudreds of requests we are getting [from hams] to come down and volunteer and can we put that up on the Internet so that it can be accessed.'

I thought about it for a few minutes and I said yes, I think we can do that."

--

Joe Tomasone did do it. The result was a steady flow of volunteers being dispatched when and where they were needed.

--
Tomasone: “On the registration page as many of you were able to see, it asked for basic information such as your name, your call sign, your address, contact information, what ARRL Section you were from and what your availability was. Now once that was put into the database, it was able to be queeried by a number of people who were given access to that portion of the siute. That enabled them to do searches based on a number of criteria.”
--

During his Dayton presentation, Joe mentioned his desire to grow what became known as the World Trade Center Volunteer Database into a general event activation management program for ARES, RACES and SKYWARN activities. Now Joe is about to get that project off the ground. But to do it he needs your help.

Joe tells Amateur Radio Newsline that making it happen will take people and new ideas. To that end, he has created an e-mail mailing list to solicit concepts and volunteers for this project. Anyone who is interested can either sign up directly by sending an e- mail to volreg-request@lists.ab2m.net or by visiting wtc.ab2m.net on the World Wide Web. Please note that their is no w-w-w in that U-R-L. Its simply wtc.ab2m.net.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ, in New York.

--

Dont worry if you missed that U-R-L. We are putting a link to it from our website at www.arnewsline.org. (ARNewsline™)

**

RADIO LAW: CC&R BILL HR 4720 ATTRACTS ADDITIONAL COSPONSORS

Good news on the legislative front. Five more cosponsors now have signed aboard HR 4720. This is a bill in Congress aimed at providing relief to amateurs faced with private deed covenants, conditions and restrictions when they want to put up antennas.

According to a story in the ARRL Letter, the list of cosponsors is now up to 23 members of the U-S House of Representatives who have agreed to sign on to the measure. This includes two radio amateurs: They are Oregon Republican Greg Walden, WB7OCE and Arkansas Democrat Mike Ross, WD5DVR. Walden was one of the two original cosponsors of HR 4720 with Texas Republican Pete Sessions. Walden and Ross are believed to be the only Amateur Radio licensees in the U-S House of Representatives.

It was New York Democrat Steve Israel introduced HR 4720 back on May 14th. The measure would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO RECORDS: 24 GHZ RECORD BROKEN

The ham radio distance record for a contact on the 24 Gigahertz band has been broken again. Jeramy Boot, G4NJH, is here to tell us who did it and how:

--
On the 7th of September Dave Robinson, G4FRE, operating as WW2R/5, and Al Ward, W5LUA, made a record-breaking contact on 24,192MHz. Dave was operating portable in EM41HC near Natchez, Mississippi, and W5LUA was operating from his home in EM13QC, at Allen in Texas.

CW signals of 549 were exchanged. The distance, based on six-digit to six-digit grid squares, is 337.3 miles or 542.8 kilometres.

The sked was set up earlier in the week via e-mail with no liaison on any band, including cellular. Attempts to repeat the contact over the same path 12 hours after the initial QSO resulted in no signals being identifiable either way on 10GHz, suggesting the morning QSO was under enhanced tropo conditions.

Jeramy Boot, G4NJH
--

No signals were heard on 2 meters or 70 centimeters at the time of the 24 Gigahertz contact was completed. Previous experiments on 10 gigahertz last July also resulted in no signals being identified. (GB2RS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Amateur Radio Association net serving our home -- Los Angeles California.

(5 sec pause here)

**

ENFORCEMENT: 20 METER NET INTERFERENCE

Interference to nets on 20 meters in the South Pacific. Q-News Graham Kemp, VK4BB, reports from Brisbane Australia:

--
20 Meter interference. The Maritime nets on 14.315 MHz are having problems with interference. Chris VK2UW says the ACA have been notified and are monitoring, but a bit of help from Hams re locating the source of the Interference would be appreciated.

It is Man made and is regular both by making noises and CW type transmissions. The nets involved are the Pacific InterIsland Net on 14.315 MHz 0800 Z each night and Tony's Net on 14.315 MHz 7.00am EST each day.

From Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the amateur Radio Newsline.

--

If you hear the interference and can get a bearing on it, please report your findings to your nations Intruder Watch coordinator. In the United States that's the American Radio Relay League. (Q-News)

**

ENFORCEMENT: REPEATER ORDERED OF THE AIR

Back stateside, the FCC has ordered a repeater operator to take his system off the air. It happened in California. The agency's Daryl Duckworth, NN0W, explains the action taken:

--
Duckworth: "A repeater shutdown order was issued to Steven Decho, KE6FX, of Draper Utah regarding operation of his repeater or remote base on Mt. Disappointment in the Los Angeles area. Decho was told in a letter to shut down operation until he either obtained current coordination or submitted a detailed, specific and acceptable plan to the enforcement bureau demonstrating how he would prevent interference to the WA6UZS repeater operation."
--

Late word from the FCC is that Decho has replied to the agency. He has shut down the Mt. Disappointment system. (FCC, RAIN)

**

RADIO SURVEY RESULTS: 1 IN 10 NEVER HEARD OF IRLP

A recent survey conducted by the website Radio-Scanner.co.uk shows that 1 in 10 radio enthusiasts worldwide have never heard of the Internet Radio Linking Project better known as I-R-L-P. The survey did however show that only 20% of radio enthusiasts were against the idea, with a massive 71% backing it. 9% were apparently undecided.

The Radio-Scanner release did not say if the survey was limited to licensed radio amateurs or included others such as S-W-L's and monitoring radio enthusiasts. Also, no data was published regarding knowledge or acceptance of other ham radio Internet linking protocols such as I-Link, Echolink, Hamlink or E-Q-S-O. (Radio-Scanner)

**

RADIO LAW: GROUP WARNS ON NEW BROADBAND REGS

A consumer action group says that some proposed U.S. government policies could harm competition in the broadband Internet market. This says the Consumer Federation of America will result in reducing choices and driving up monthly fees for users who want high-speed access.

The C-F-A contends that by easing regulations on incumbent cable television and local phone companies, the Federal Communications Commission will hasten the demise of independent Internet providers who reach users over existing phone and cable lines. They say that , consumers will suffer as cable and local phone giants that currently dominate the broadband market will no longer be driven to lower prices and create innovative products.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services, and the agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC Communications Inc. (CFA)

**

HAM RADIO HELP: IHS LOOKING FOR VOLUNTEERS

The International Health Service is looking for ham radio volunteers with High Frequency portable operating experience to go to Honduras from February 14 to March 2, 2003. The International Health Service is a non-profit organization based in Minnesota that provides free health care to the people of Honduras. Applications are being taken through the beginning of October. If you are interested please contact John Kirckof, KB0UUP by e-mail to jmkkek@runestone.net or phone him at 320-634-4386. The I-H-S web site can be found at www.ihsofmn.org (HIS)

**

NEW RELEASES: PASSPORT TO WORLD BAND RADIO

Media Network reports that the 2003 edition of Passport to World Band Radio is now available for ordering from Universal Radio. Priced at $15.90, Passport to World Band Radio is the bible of S-W-L's and other radio monitoring enthusiasts around the globe. More information is on the web at www.universal-radio.com. (Media Network)

**

SPECIAL EVENTS: THE COAST GUARD AUXILIARY 63RD ANNIVERSARY ON THE AIR

The U.S. Coast Guard Auxiliary' 63rd Anniversary special event Radio Day is slated for Saturday October 5th. The event will take place at all Coast Guard Auxiliary Districts across the United States. Operations will take place on 40 through 10 meters. Listen for call signs like K1G, N2A, W8E and the like and Q-S-L as directed on the air. (Press release)

**

HAM RADIO IN CYBERSPACE: ARRL CENTRAL DIVISION NOW ON THE WWW

The American Radio Relay League's Central Division now has its own home in cyberspace. Its the creation of Clay Melhorn, N9IO. The good news is that there is no advertising of no pop-ups on this site. Oh yes, you will find it on the web at www.central.arrl.org. (Listener contributed)

**

CONVENTIONS AND HAMFESTS: LIMARC RESCHEDULED

The LIMARC Hamfest that was to be held Sunday September 15th has been rescheduled to Sunday November 10th because Mother Nature would no cooperate. According to Eddie Muro, K2EPM, inclement weather caused the last minute cancellation. Muro adds that the venue will remain the same -- Briarcliffe College in the town of Bethpage New York. More information is on the web at

www.limarc.org. (LIMARC)

**

CONVENTIONS AND HAMFESTS: CSVHFS IN MILWAUKEE

208 people attended the recent Central States VHF Society Conference held in Milwaukee Wisconsin. Conference Proceedings are available for $20.00 shipped domestic United States from the Central States VHF Society in care of Bruce Richardson W9FZ, 2330 Lexington Ave S. #312, Mendota Heights, Minnesota 55120 . And less we forget, next year's conference is in Tulsa Oklahoma on the last weekend of July. (VHF Reflector)

**

HAM RADIO NEWS SERVICES: GB2RS SUBSCRIBABLE LIST NOW ON YAHOOGROUPS

Also. the Radio Society of Great Britain’s weekly news bulletin is now available over a Yahoogroups mailing list. The news is posted over the weekend, after it has been released for non RSGB members. You can subscribe by sending an empty e-mail to GB2RSnews-subscribe@yahoogroups.com

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. (Listener contributed)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: NEW CATV CHIPS REVOLUTIONIZE SETY TOP BOXES

A new chipset developed in Canada may revolutionize set top T-V converter boxes. The spinoff of this technology could also impact future ham radio gear. Norm Seeley, KI7UP has more:

--
Zarlink Semiconductor of Ottawa Canada has announced availability of a new high performance chipset for tuning analog and digital RF cable TV signals. Zarlink's two-device chipset claims to deliver reception of all analog and digital cable channels, while allowing designers of multi-service cable set-top boxes to shrink tuner designs by 50% and reduce tuner costs by up to 20%.

The Zarlink chipset is comprised of a broadband tuner I-C and a new chip that handles frequency down-conversions and intermediate frequency amplification. Zarlink says that the new I-C’s implement active RF and IF amplification circuitry directly in the silicon wafer structure. In fact, the circuitry inside the count-down integrated circuit eliminates up to 40 external components from high performance, double-conversion tuner designs.

Norm Seeley, KI7UP.
--

The same Zarlink based technology could conceivably be used to shrink the size of other electronic gear that will require advanced R-F signal processing. This could include the next generation of digital communications ham radio gear. Ham gear that could be no bigger than a set-top CATV converter box. (Based on Zarlink release)

**

EMERGING TECHNOLOGY: INTEL TO INTRODUCE 3 GHZ PROCESSOR

Computer industry sources say that Intel may be moving up the introduction of its new 3 gigahertz Pentium 4 processor. Intel had originally planned to introduce the 3.0 gigahertz Pentium 4 processor by the end of the year. The earlier date will give manufacturers an edge in getting machines ready for the Christmas buying season. Intel also is reportedly accelerating the introduction of its 2.80 gigahertz Pentium 4 as well. (Via Internet)

**

RADIO IN SPACE: IO - A JOVIAN TRANSMITTER

From the science page comes word of a kind of natural transmitter in orbit around the planet Jupiter that has no magnetic field. Roy Neal, K6DUE, has more:

--
There are many mysteries in deep space. Men and their machines are hard at work trying to resolve them. At the heart of unmanned space flight, the Jet Propulsion Laboratory, in Southern California is home to the huge antennnas that control the space ships that go out in the attempt to unlock the secrets. It also is home to amateur radio station W6VIO and many of the hams who run the station take part in the deep space endeavours.

The latest report says they have found that IO, a volcanic moon circling the planet Jupiter, transmits charged particles…easily detectable as power and noise. But the moon apparently has no magnetic field. These data were gathered by NASA’s Galileo spacecraft as it orbited Jupiter for the last 6 years.

The discovery took on importance last Fall. The researchers were trying to determine whether the moon created its own magnetic field inside the massive one generated by Jupiter, the largest of all our solar planets. When Galileo crossed the path of a magnetic field connection between IO and Jupiter, suddenly the density of the charged particles through which it was passing increased…but no magnetic field was

detected. Leaving the researchers, in their earthly control room, yet anther puzzle of the universe to solve.

For the amateur radio newsline, Roy Neal, K6DUE
--

More on this fascinating finding is available in cyberspace at www.jpl.nasa.gov/videos/Io (NASA-JPL)

**

INTERNATIONAL - CANADA: VO1MX APPOINTED ASSISTANT DIRECTOR

On the international wire word that Dan Goodwin, VO1MX, of Gander Newfoundland has been appointed as an Assistant Director for the Radio Amateurs of Canada Atlantic Region in Central Newfoundland. Goodwin fills a vacancy that existed in the central region of Newfoundland serving the major centers of Gander and Grand Falls-Windsor. (RAC)

**

INTERNATIONAL - ARGENTINA: HAMS TO GET 136 KHZ ALLOCATION

Hams in Argentina are getting access to the 136 kHz band. Roberto Beviglia, LU4BR, who is the President of the Argentinean national amateur radio society says that his group made the rules change request to the Argentine radio regulatory department. The government agreed. As a result, 135.7 to 135.8 kHz has been initially allocated to that nations amateur service on a secondary basis. (GB2RS)

**

DX

In DX, word that Laurence Howell, GM4DMA, is active as portable 9M6 on the High Frequency bands and 6 meters from Sabah now until the 30th of September. He is there to teach communications theory and to set up a new country headquarters communications base for the youth development charity Raleigh International. (GB2RS)

And the ARRL DXCC desk has announced a new 30 meter DXCC Single Band award. Applications for this award will be accepted beginning on October 1st. The new 30 meter DXCC certificates will be dated, but not numbered. (ARRL)

**

THAT FINAL ITEM: FLYING THE FLAG

And finally this week a look back to the way ham radio commemorated 9-11. This week its the story of two Florida hams who took to the air to fly the flag. In their case it was not by radio but rather in a Cessna 172 aircraft carrying several U-S flags as a part of an event called Flight Across America. The pilot at the controls was veteran aviator Steven Crow, K4CPX:

--
K4CPX: “What they did was to assign somebody from every state to carry their state flag into New York City to be there originally on 911. But they locked down New York City again for 911 so they had to do it a few days early.

Those airplanes that could not come to New York or wouldn’t because there were only fifty airplanes carrying state flags -- they wanted to have an airplane at each airport fly aloft for this commemoration which we did.

Then I came up with the idea of carrying flags for individuals. For people who wanted their flag commemorated with a flight on Flight Across America. So we did and we carried five flags aloft and we put a seal on them and signed them and gave them back to the people after we got back on the ground."
--

Accompanying K4CPX was Wendall Peterson K0REQ as co-pilot and Julius Ehland as the bearer of the flags. And on the morning of 9/11 the three made their way to Punta Gorda's Charlotte County Airport only to find it not to be a great day to venture into the sky:

--
K4CPX: "We went out to the airport anyway and stood around watching the rain sweep through. It is a pretty large airport with 6000' runways and I think we were the only pilots and the only flight that was even there that day."
--

Finally a slight break in the weather:

--
K4CPX: "We hung around and hung around another couple of hours -- all the time watching -- and looking at the RADAR -- and check it and see this stuff coming through. And we found a bit of a hole and decided -- lets jump in and take a quick look from the end of the runway and maybe aloft and maybe we can get the flight in."
--

And that's exactly what they did:

--
K4CPX: "We took off; climbed up to 1000 feet, turned sharply ahead of some heavy weather coming in and came right around the airport and landed on another runway and we were on the ground. We were probably in the air a total of maybe 12 or 13 minutes."
--

The important thing is that the flags were flown and returned to their owners. And while Steve and Wendall did have some 2 meter ham gear on board the Cessna they never bothered to turn it on. This was 9/11 and commemorating the day was what the flight by these two radio amateurs and their friend had really been all about. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that our survey how ham radio is being used by home schoolers is still taking place. If you are a home schooling parent or a student being home schooled, please send your thoughts on the subject by e-mail to newsline@arnewsline.org. So far the responses we have received are very interesting to read.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Ken Locke, N8PJN, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Agreed, with a slight correction. "The test requirements for a ham
license today are not a barrier to anyone who has a modicum of
interest in *amateur* radio.

>
>You agree with Steve but doubt anyone has been prosecuted under
>such a situation????

What I'm saying is that a person could theoretically be prosecuted for being under the influence while in the US, even if such influence was legal where the substance was consumed.

Example: Person gets drunk in a place where public drunkenness is not a crime. Person is then transported to an area where public drunkenness IS a crime. Law enforcement authorities prosecute the person for being publicly drunk in the second location, even though no drinking took place there.

>>prescriptions.
>>

>> Will an LPN who writes a prescription in the "other part of the world" be
>>in
>> violation of his USA license?
>
>My opinion...NO.

Exactly - because the local licensing authority attaches different privs to the reciprocal license.

In fact, as Steve points out, prescription privs vary in the US itself.

> exists because of definitions? That is preposterous.
>

Well, I don't how you could miss the correlation. Many times, the matter
being argued in a court is the very definition of things that are pertinent
to that Hearing. One part of diversity training is helping others be aware
that what "we" see one way, someone else may see entirely different.

I think the greatest example of the court scenario would be one of the
critical elements of Roe v. Wade, and that is: when does human life begin?
Even something as scientific as the creation of a human being at inception
lends itself to a debate on when that embryo *"really"* becomes a human
being.

I believe that if we are to vote for elected officials who pass our laws, it
is our obligation to stir, get involved in, and seek debate on items. When
my representatives in Washington D.C. are deciding on rules, laws, and ways
of life under the task of "rooting out terrorism," I want to know what their
definition of terrorism is. When my representatives in Washington D.C. are
making decisions for laws governing abortion, I want to know what their
definition of "human life" is.

> > > You need to get on the same page with the rest of the English speaking
> > > world.
> > >
> >

And, I think you're wrong. To some, there is clear-cut definition of
terrorism is. For you, it is straight out of the definition of a book. A
book that, perhaps 100 years ago didn't even have the word "terrorism" in
it. To others, the very implication of what terrorism is becomes the
staging ground for how far a government can/could/should go to defend
against terrorism. And, as a side note, it also means that the past actions
of that government must be considered in the equation as to how much "we"
the People believe their actions can and will be seen as level and made with
good judgement.

In my opinion, Dave, I am going much farther than you are willing to
understand what terrorism is. (By the way--the act of terrorism is
considerably a different animal than a terroristic act; since you are so
willing to go by the book. Note the suffix, Dave.)

>

>
> No, Kim. Freedom of expression is not all about the misuse of a word by
> application of a homemade definition.
>

You should have worded that a little differently, perhaps. PART of the
freedom of expression is that we can debate the meanings of "things" to us.
The Bible states that there is one God. The Bible implies that the
Christian way is the only way. The Bible states that only a belief in Jesus
Christ as the Son of God will get you to Heaven. That's been being debated
for centuries, Dave.

> >
> > Dave, you know what? The only thing I ever see you do when your buttons

Facts are a funny thing. Most of the time facts are dependent upon the
perspective from which they are approached. That's why science is so
exciting.

> > So, Nagasaki and Hiroshima were not examples of terrorism?
>
> How many times would you like me to say "No"?
>

You know, it isn't a bad thing to believe that it was an act of terrorism
that was one in which many other choices were just not feasible. I remain
as loyal a US citizen and dedicated to this country as anyone else.
However, I believe the US military is quite able and ready to commit acts of
terrorism and sometimes it even works in our and the world's favor. It is
most, most unfortunate. But it happens. What the US armies and government
did to Native Americans on this soil was--in my opinion--many acts of
terrorism and should never have happened. What the US did with the A- and
H- bombs was a horrific act of terrorism and--hugely unfortunate--netted a
very positive result.

> >
> > We all have our weaknesses...don't fret.

So noted, Mike. However, I do believe it is a terroristic act. And, Steve
Robeson is absolutely right. It is both men and women, and children of both
genders that have had to face this. I believe anyone who supports the drug
trade in any way is supporting terror-ism.

>

It is up to you to ponder that, Mike. An important thing is that I would
not discredit or disallow the impact it may have upon you. More important,
would you want to know if one of your elected officials uses the book
definition of terrorism, or would entertain your concept above?

>

Agreed as to "under the influence." Others were suggesting that
the individual could also be prosecuted for "possession" based solely
on a test for the presence of a drug as indicated by a blood test or
urine sample.

I'll agree but it is a very specific universe of people (i.e. members of the
US military) that are subject to it.

I was not asking, but it seems that if that specific band is dead, maybe an exchange would be more advantageous all the way around. Additions to our existing HF bands would probably not draw many complaints. Never considered the 70mhz allocations but it sounds interesting.

Let's make a deal to swap all of the 220 band noone is using for 2
more Mhz on 2 meters.....in the nearly unused military band on either
side of us. Give the military the whole 220 band (or the FCC lawyers
who want to sell it for their own profit) in trade for 143-149 Mhz 2
meter band. It's a fair trade. They're getting more bandwidth.

As usual since WW2, other services have completely bypassed ham radio
in innovation. My wireless link up the tower is accessible for about
4 miles if the notebook has a decent antenna on it for 2400 Mhz line
of sight across the river. The kid down the street gets over 400Kbps
downloading through it from my cable internet connection. I can get
over 1Mbps out on the seawall overlooking the river.

In the TRUE spirit of ham radio, without any license at all, take a
look at Hassan's neat wifi link in Egypt:
http://www.d128.com/wireless/
Take a look around at the various links, especially the antennas,
being used by Warchalkers across the planet. This new "broadband
amateur radio" is a LOT of fun, without kissing any old fart's ass at
the ARRL or your local VEC session for permission to operate.....

If you're near the Charleston AFB in N Charleston, SC, my microwave
link is on SSID 3 with cable access. Help yourselves....(c;

Oh, and it's not theft or illegal to warchalk. If anyone doesn't want
outsiders to use their system, it's very easy to just password protect

it and turn off the free access. Most companies don't care. Many
cafe's like Starbucks are adding service to attract customers. With
my homebrew colinear on the notebook, I can get Starbucks' signal over
3 blocks away! I quit carrying the Budweiser Beam around. Too many
funny looks....(c;

Here's some interesting places:
http://www.turnpoint.net/wireless/has.html
http://www.warchalking.org/
http://www.wardriving.com/

Thank yous to all the WiFi suppliers for letting us use a few
megabytes to browse the web and get our emails......(c;

That would almost be a decent idea if you could get the dozens of other users moved economically.

Speaking from some vantage point of knowledge from Civil Air Patrol, CAP has hundreds of repeaters nationwide with inputs in the 143 range and outputs in the 148mHz range, along with several other discreet simplex frequencies up to 149mHz.

Although CAP does receive some funding from the Air Force, they still must depend on the same kinds of donations and other "membership provided" services vis-a-vis Amateur Radio to keep the net operating.

Re-crystalling for a few kilohertz or even a couple megahertz is one thing...Going up band 90mHz would be an expense of monumental proportion. There would not only be the expense of the repeaters themselves, but the replacement of every mobile, handheld and aeronautical asset in the fleet. Again, despite occassional USAF funding, that would put a tremendous burden on the rank-and-file member.

CAP is already trying to hit up the USAF for almost $30M for compliance with just narrowband FM gear for present frequencies...I can forsee a pricetag another $15M if we had to make that kind of change.

Then add in MARS, FEMA, the Coast Guard Auxiliary, etc, and the "deal" get's REAL expensive!

While don't see the FCC nor the Amateur community in general wanting to play that kind of "Let's Make A Deal", I can see some further "reassignment" of 222mHz if something isn't done.

BTW...I have made several posts here through the years promoting the various "spectrum protection" bills that have been ginned up only to ahve several folks dismiss it since "everyone can agree" on spectrum protection for Amateurs. Obviously this is not the case since it is now in it's third or fourth version and has yet to make it to Committee.

Isn't it when 99% of the amateurs have equipment already operating on
the new 2 mhz and nearly NONE of them, probably less than 1% of them
have equipment on 220 and will never have 220?

It has been eliminated as a "new issue", however those with a Novice Class license may continue to renew it and operate with their previously granted privileges.

If such a band change were to occur, it would be simple enough to reallocate the Novices to another band with a line-item change in the R&O that authorized the new band...no big deal.

Not unusual at all to hear truckers and other unlicensed
activity in that freq. range. Cruise the 5, 6, 7, 8 10, 12,
& 14 mhz bands. They're alive with unlicensed activity.
Truckers routinely use long range HF freqs. for which they
are not licensed, as do fishing boats, various companies,
recreational boaters, missionaries, etc. All dedicated enforcement
monitoring of unlicensed activity ceased in 1996, in spite of the
many people who want to spin it otherwise. Check pirate web pages,
news groups, and popular freqs. Pirate broadcast activity in on
the increase, including talk of a ship being outfitted. CB radio clubs
operate openly and continually in the 25, 26, 27, & 28 mhz bands.
CB radio ops are even into digital modes, outside the legal 40
channels.

New licenses aren't accepted, but remember that licenseholders as of April 14,
2000 may continue to renew indefinently.... It wasn't eliminated.

One of my sailing buddies got a new Caddy Escalade to tow his new motorboat. He was showing off Onstar and I told him let's test it out......

We pressed the Onstar button and when she came online we both acted drunk as a skunk. 'Yessh, ma'am. Can you tell us how to get home?", my buddy slurred. "Mister F.......you ARE home?!", she rightly exclaimed. Then, she rightly followed that up with, "Mister F.... I can't let you drive like this. If your wife wants to drive your new Escalade, tell her to press the button and I'll release the vehicle to her when driving is safe. I'm securing your key for a few hours, otherwise. We don't want to see you get hurt or hurt somebody else.", at which point she not only terminated the call but locked the ignition so it wouldn't start!!

Onstar is great! They'll even open your door for you if you lock yourself out if you have the proper pin code when you call from your cellphone.

BUT DON'T CALL IF YOU'RE DRUNK!!

It's been done before, btw.

There are fewer than 37,000 Novices today, down from about 50,000 before restructuring.

One problem that is being ignored is that all existing 220 MHz ham gear, including installed repeaters, would become almost worthless. The commercial users can't use it because it's not type accepted for their services. About the only thing a 220 rig would be good for is being the IF of a microwave system.

>You mean like the experimenters on WiFi, who don't copy Morse?

Hey, man, experiment all you want! Your WiFi system sounds fantastic! I wish our allegedly technically-inclined No-Code Techs here in Kent County, Delaware could come up with something similar! I'd personally GIVE them 2.4 GHz access if it were in my power to do so!

However (there's always a "but," isn't there) -- I'd use WiFi AND still be an enthusiastic CW user as well! You see, the two aren't mutually exclusive, and never have been! So you're classic attempt to criticize code users for being technically incompetent simply doesn't carry any water! Among local hams, I've been at the cutting edge of digital communications -- limited only by the lack of participation from the rest of my local hams, none of whom can be bothered with learning Morse/CW at a useful speed either! In fact, the only VHF packet activity in our area is being supported and used by hams who are also Pre-Restructuring Generals and Extras, who are all, to a man, avid and proficient CW operators!

Sorry to burst your bubble, but I've got a lot of practice.

The FCC enforcement went downhill long before 1996. Part of the problem is the HF isn't such a big deal anymore. Corporations want UHF and microwave frequencies. Communications via radio often means via satellite. The saving grace may be that, with the government really running in the red (yep, they thought big tobacco was going to save the day for them and they kept spending. Dipped into Social Insecurity again. Despite their best efforts to grab more money, they are running HUGE deficits), they might actually figure out that pumping a few tens of millions into the FCC enforcement just might be a way to raise a ton of money. Oh, not the individuals so much as the companies - trucking, fishing, whatever. Of course, recreational boats large enough to accomodate high power and/or low frequencies will probably be valuable enough to make it worth the government's time to go after them. Go from a dozen or so NALs a year (most of which will either be lowered or not collectable) to a few hundred collectable at $20,000 a piece ... The large numbers of dollars into the FCC would be one time - to reopen old monitoring stations and actually staff them. Get some vans and put their people back on the road. After the initial cost, a few million a year to collect as much or more in NALs just might interest them. Right now, about the only way to get caught is to try and set up a broadcast station on the American AM or FM broadcast band. A few corporations own most of the broadcast stations and they have HUGE wallets. They WILL get the FCC to act in those situations.

Abortion isn't under discussion, Kim. Your misuse of the word
"terrorism" is.
You know, it's sort of like your definition of "all band" which to you
means "most bands".

That's obvious and you've already described your reluctance to look up
the word.

> To some, there is clear-cut definition of
> terrorism is. For you, it is straight out of the definition of a book. A
> book that, perhaps 100 years ago didn't even have the word "terrorism" in

The word "terrorism" is defined. That you can't or won't accept the
definition or even be bothered to look at it does not change that
definition.

> To others, the very implication of what terrorism is becomes the
> staging ground for how far a government can/could/should go to defend

So far, you're the only person I've encountered who uses "terrorism" to
help in your definition of "terrorism" I've looked up the word and I
see no mention whatever of the things you describe.

Right. We weren't discussing "terroristic". The word "terrorism" is
under discussion. So you are willing to attempt to understand what
terrorism is and will bend over backward to do so except when it comes
to looking up the word?

> >
> > I don't read Christian right magazines

We were discussing "terrorism". Find that definition yet?

> > > >

They assist quite a bit in living, Kim. I can use a dictionary. You've
told us that you won't even look up the word under discussion. Which
one of us has a problem?

> > >
> > > Tell that to the next attorney who debates the meaning of a word, a law,

> freedom of expression is that we can debate the meanings of "things" to us.

You can't do that by misapplication of definitions. The idea is to find
and use words which express how we feel.

> The Bible states that there is one God. The Bible implies that the

See the threads on the federal gummint complaints about the proposed
60m ham band. See the threads on "harmonizing" the 40m band which go
back 20-25 years and ain't happened yet because of the volume of
complaints from the broadcasters.

> Never considered
> the 70mhz allocations but it sounds interesting.

Guaranteed to be really "interesting", that's TV broadcst channel 4 in
the U.S.

Before you start noodling "allocation tradeoff studies" dial up:

http://www.ntia.doc.gov/osmhome/allochrt.pdf and find out who already
lives there and weigh the prospects of the FCC moving them out of the
way so that we can play there.

222 is for all practical purposes dead because it's the lame 2m
wannabe band, always has been, it offfers nothing 2m does not offer
except somewhat shorter verticals. It has the same +/- propagation and
operational characteristics as 2m has, the same would be true in the
case of having both 50 & 70Mhz bands. There is no point to the
continued existence of the 222 band except as it relates to the usual
ham turfism mindset. Get comfortable with it.

>There is one thing everyone seems to be missing. That is we (hams) don't
>own either 220mhz or 2 meters.

I'd have to (partially) disagree, Dan. 144 to 146mHz is an exclusive Amateur allocation worldwide. Yes, the Congress and the FCC have final say, however in a way Amateurs do "own" part of that.

The 220 (and now 222) mHz band has always been an iffy proposition, and that uncertain status probably has contributed to it's lack of popularity.

> Thus we can't negotiate with the FCC on
>anything.

On this I completely disagree, Dan. That's what NPRM and "the right to petition the government" are all about. We may not get what we want, but we CAN "negotiate" with them.

You missed the point I was asking, Phil. I understand that "OnStar" is an optional service. However I don't recall any TV ads promoting the locating feature if the vehicle is stolen, altho it makes sense.

My other inquiry was can the vehicle be tracked WITHOUT the owners consent. In otherwords, can a third party in any way obtain my whereabouts without my granting of permission to "OnStar" to do so, including law enforcement or surveillence?

From the ARRL Letter:

--

Former FCC official A. Prose Walker, W4BW, the man some consider the godfather of the so-called ''WARC bands''--30, 17 and 12 meters--died August 8 following a brief illness. He was 92.

Walker, who headed the FCC Amateur and Citizens Division from 1971 until 1975, made the initial proposal for three new amateur allocations at 10, 18 and 24 MHz during an International Amateur Radio Club (4U1ITU) meeting in Geneva in 1972. Later, he organized and chaired the US preparatory committee for the Amateur Service--the Advisory Committee of Amateur Radio--which took the initial steps to turn the idea into reality at the 1979 World Administrative Radio Conference. The committee also included former ARRL General Manager Richard L. Baldwin, W1RU, who said this week that he was greatly saddened to learn of Walker's passing.

''One of my fondest memories of WARC 79 was the pleasure and the challenge of working with Prose in preparing for that conference,'' Baldwin said. ''He was a stalwart supporter of the Amateur Service, and few amateurs realize how very much they owe to him.''

An ARRL Life Member and a licensee since the 1920s, Walker was an enthusiastic amateur who remained quite active on the air until shortly before his death.

A native of Ohio, Walker's career took a number of turns, including a stint as a high school teacher, but his primary contributions were in the fields of communications and engineering. He did two tours with the FCC and also worked for the National Association of Broadcasters and Collins Radio Company.

During his career, Walker earned a global reputation for participation and leadership within the International Telecommunication Union (ITU). He was the leading member of the US delegation at more than 20 international conferences.

Why not? If your vehicle becomes the object of a criminal investigation, whether or not you're in it, I have no doubt it could be tracked by third parties without your consent. Don't need to even consider Homeland Security issues.

Which is exactly why *anyone* who buys or owns
and vehicle equipped with OnStar Technology is
a fool. They have given their *consent* to be monitored
not only by law enforcement, but the manufacturer.
I visited a Buick dealership and they showed me how
on their computer how, at the punch of a few keys, they
could track *ANY* OnStar equipped vehicle they have
sold at that dealership, in REAL TIME, or if they know
the VIN (which they can get via GM's corporate database)
they can track any other GM vehicle - anywhere in the
Unites States and Canada. Buick/GM calls this "customer
care" - I call it overt marketing monitoring of their customers
and worde...THEY SELL THIS INFORMATION to
other businesses for "marketing purposes". (Including so-called
"law enforcement" too) Do you own an OnStar equipped
vehicle? If you do, my advice is to rip it out, lay it down
in the driveway and take a 20 pound sledge-hammer to
smash it's guts to scrap, till ABSOLUTLEY nothing usefull is left of it.
(It's usually a silver box mounted in the trunk in one of the
rear quarter-panels. It will have OnStar stamped on it someplace)

What's the problem? GM is being upfront about the capabilities of the system.
Nobody is forced to buy a vehicle with the OnStar system.

>Do you own an OnStar equipped
>vehicle?

Nope.

>If you do, my advice is to rip it out, lay it down
>in the driveway and take a 20 pound sledge-hammer to
>smash it's guts to scrap, till ABSOLUTLEY nothing usefull is left of it.
>(It's usually a silver box mounted in the trunk in one of the
>rear quarter-panels. It will have OnStar stamped on it someplace)
>
And after you do that, the car probably won't start. GM may even know that the
OnStar device was disconnected.

But there's no reason to be destructive.

One of the greatest things about capitalism is that every time a person makes a
voluntary purchase, they are, in effect, voting for the products they buy and
the companies who produce them. If nobody buys an OnStar vehicle, the system
will die out. This is why Beta videotapes and LP records are so rare today,
and why neighborhood stores are being replaced by Wal-Marts in many areas..

Unfortunately, many people do not realize how powerful their wallets can be.

That can - and should be - covered by contractual agreements with
substantial penalties for violation on the part of the tracker.

Even if there are such contractual agreements, subpenas or warrants
trump them. just like with wiretaps.

The above statement reminds me of an incident at a Computer
Data Privacy Conference that I participated in several years
ago.

A rather loud and unkempt (on purpose, no dount) "individualist"
got up and started ranting about his personal privacy and how
he refused to carry any ID on him that would allow anyone to access
any of his medical info or records whatsoever because "it's
none of their business". After a few minutes of this, a
well-modulated voice from the rear of the hall called out "OK,
just keep your ass out of my emergency room when you have a
serious injury".....

That's right. Make yourself so inaccesable that when you need help
and can't help yourself no one will be able to find you.

Right and then when your car overturns on a county road and you
need help you can wait for somebody to come by.

We had this happen in this county (Orange Co. IN) just last week
and a person from onstar called the local sheriff's dept and told
them about the accident and that the woman was inside the
overturned car talking to them. OnStar told the sheriff's dispatcher
the GPS location and the county roads the woman should be near
over the phone. Sounds like a pretty good system to me.

1496. Lance Bass is now a ham!!!

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-29 03:11:41 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0209281911.536cd589@posting.google.com>
Source record: 53313

The N'Sync singer Lance Bass has earned his amateur radio license as a result of his preparation to become an astronaut. Tonight, I sent him the following traffic message: "Greetings from amateur radio. If you want to upgrade, buy buy buy Code Quick. I hope Britney becomes a ham."

Yes, I am the one who suggested on this forum and to the ARRL leaders that the ARRL lobby NASA to encourage Lance to earn his amateur radio license. I like to think that my suggestion prompted the ARRL to act. But perhaps someone at the ARRL or NASA thought of the idea before I did. Perhaps Lance discovered ham radio on his own. I may never know the truth.

I have some ideas :)
1. If Lance Bass gives ham radio a hipper image that appeals to young people, I'll take credit. If people start complaining about teenyboppers sharing hair and makeup tips on the air (and conveniently forget that they used to complain about old men describing their health problems), I'll let the ARRL, NASA, and Lance take credit.
2. If Britney Spears (pop singer and ex-girlfriend of Justin Timberlake, another N'Sync member) becomes a ham and endorses ham radio, I'll take credit. If people complain that there are too many Britney dolls for sale at hamfests, I'll let the ARRL, NASA, and Lance take credit.
3. If ham radio becomes mainstream enough that the antenna restrictions are dropped, everywhere, I'll take credit. If my fellow hams have difficulty operating because there are too many other neighborhood hams operating at the same time, then I'll let the ARRL, NASA, and Lance take credit.

>

Oh. So wait a minute. In this very post, you chide me for having used the words "all bands" in a prior post, since I really didn't mean "all" bands, but most. Now, you author "I don't read Christian right magazines or listen to Christian right talk shows" and you are telling me that I am the moron for taking you at your word? Pah!! Which is it, Dave? Do you read and hear the Christian right magazines and talk shows, or not? Oh, wait, don't answer that by the way. I am quite tired and bored with this discussion.

> >
> > I said terrorist(ic) act.

>

How we "feel"????? Will you puhleeze make up your mind. I use the word terroristic to express how I "feel" about something and all you've been doing is telling me how wrong I am for it, Dave. You are much more ambiguous than I thought you were. *YOU* can't even make your own mind up.

You're getting tangled up in how someone feels. We're talking about
definitions.

> > >

We're not defining "life". We're defining "terrorism". By the way, my
dictionary doesn't say anything about "what goes beyond the definitions
in a book" under "life".

> > >

...not to mention that you're tangled in your own stuff. I haven't
contradicted or reversed myself. You wrote that "One can only imagine
why you would do that" and I responded to it. Oh, and you aren't a
moron for taking me at my word. You're a moron because you expand the
definition of a word to include anything you might feel.

What it is to you isn't important. The meaning of the word "terrorism"
has already been defined.

> > >

We know that you carry the definition farther. That's incorrect. The
word already has a definition. That you'd like to throw in anything you
find unjust or morally reprehensible is irrelevant.

> > >

There are in existence, words which are capable to expressing what you
feel or what you wish to convey. Try finding the meaning of the word
you intend to use and see if it its definition agrees with the idea you
are trying to convey. Anything else is misuse of a word.

Yeah. If you were an open book, someone might understand what you were
babbling about. You know, I've decided to expand the definitions of
some words too, Kim. To me, the word "moronic" now means "pleasant" and
"wonderful".

I like to think of you as moronic.

Hear hear! I recently ahd a WELL dressed couple come in, straight from a "legal rights" clinic, it seems, wherein they were told they had the "right" to NOT sign any papers in the emergency room!

I told them that I needed thier signature for permission to treat them and they started to balk on that too until I pointed out they were NOT here for a "true emergency", and without that signature they'd sit and wait until they DID sign in.

I also informed them that seeking for-fee medical services and later refusing to pay for thier provision was a felony in Tennessee. Seems they got the picture.

BTW, Jason, where'd you get this? I checked QRZ and FCC databases without any results...Or is Bass a stage name? I DID see him in the newspaper a few weks ago being shown how to use "hamradio", but that was before he was dismissed from the program last time.

Very little to do with ham radio, but then, very little in this group
does...

Obviously doctors and hospitals have a right, even a duty, to
present their terms and conditions to their patients and reach
agreement when possible on financial matters prior to treatment.
You seem to work at a hospital. Let me ask: have you actually
read the legal documents you are asking the patients to sign
critically and do you personally think they are fair?

I was in a doctor's office recently, and was presented with
a "standard form" to sign. On taking the time to read the form
(something that seemed, in itself, to tick off the receptionist)
I was taken aback by what I was being asked to sign. First, I was
being asked to assign all my "medical and/or surgical benefits,
to include major medical benefits to which I am entitled,

including Medicare, private insurance and any other health plans" to them (left unstated what whether said benefits had anything to do with what I was to be treated for). Further, "I understand that I am financially responsible for all charges whether or not paid by said insurance." So, should my insurance plan actually make good on a bill and pay it, at a rate agreed to by a prior agreement between the doctor and my carrier, the doctor could still double bill me for his services and legally, I have agreed to pay him again.

Now, I'm sure you'd say that I'm being ludicrous. Surely no doctor would do that. "Trust us." Well, aside from the fact that one might ask why I should project trust to a doctor who obviously doesn't trust me, I'd have to also ask why a practice that prides itself in dispensing competent medical advice and service allows itself to force such an unfair and one-sided legal document on its patients at a time when they are often under great duress and have no real alternative but to submit to whatever is demanded.

Honestly, the forms my mechanic asks me to sign are much less egregious.

If the forms were truly "fair", like the standard legal forms one uses in a realty transaction (presumably hashed out between lawyers with an interest in both sides), then, yes, I'd have no problem with "standard forms". But, it's been my experience that typical standard doctor's office form -- and, increasingly, any form you are asked to sign -- is far from that, and that's why I tend to side with those who do take objection to them.

And it becomes VERY unfair for the rest of us when the bozo's
injuries, which could have been easily dealt with had s/he called for
help, worsens to the point where public assistance has to pick up the
slack for the complicated and long-term medical costs.

Privacy? If you've spent ten seconds on the aie you will find out
that we all live in a fishbowl, and some of us are/were fishermen
therein.

I was not talking about financial matters, but about the availability
of medical history and records.

Is it reasonable for a patient to present him/herself and refuse to
make that information available? A recipe for medical disaster.

>I was in a doctor's office recently, and was presented with
>a "standard form" to sign. On taking the time to read the form

>anything to do with what I was to be treated for).

Case law says that it is so limited, and both the doctors and the
insurers know this. That's what happens when you try to play "rights
lawyer". Do you also try to tell the doc how to treat you?

>Further, "I understand that I am financially responsible for all charges
>whether or not paid by said insurance." So, should my insurance
>plan actually make good on a bill and pay it, at a rate agreed
>to by a prior agreement between the doctor and my carrier, the

>I have agreed to pay him again.

Now you're playing contract lawyer. All that clause says is that if
the insurer pays less than the demand, or doesn't pay at all, you
are on the hook for the balance.

>Now, I'm sure you'd say that I'm being ludicrous. Surely no
>doctor would do that.

Docs who so bill are really desirous of finding out how their talents will be put to use in the Federal prison system as an "inmate" for Medicare and Insurance fraud.

You DO read the statements which the insurer sends to you when they pay the doctor's bills and compare them to the bills that the doctor sends you, don't you?

It has to do with attracting new hams and publicizing the ARS. Having famous people as spokespersons for the ARS can be a very good thing. I don't know much about Mr. Bass, but if he publicizes the ARS in a good way and attracts new hams, young or old, that's a very good thing. Publicizing the ARS and attracting new hams are definitely POLICY issues.
>

A typical reaction from the sloop-foreheaded
neanderthals we are so abundantly blessed with
in this hobby called ham radio. Just why is it this
this hobby seems mentally stuck in the 1950's?

Reminds me of the kind of guys you see at hamfests in penny-loafers
and shorts who want to bid you down to 25 cents on a 50 cent item.
Cheap, crotchety old white men who's wives wish they would drop dead.

I bet you'll be spinnin 360° in yer grave when a week after
you've gone to pushing daisies up thru the topsoil, the
first thing your XYL does is hire a bunch of neighborhood
kids to cart all "that stupid radio stuff" out to the curb on trash day.

(assuming the 2 or 3 "SK-Vultures" at the Club don't beat
a path to the door first to try and get it all for a song so
they can re-sell it on E-Bay at enormous profit.)

The only way I can see that Element 1 will survive is if S25.5 doesn't go away. And there's not much chance that S25.5 will survive WRC 2003. That's basic reality.

>Keep e-mailing the FCC. Hopefully it'll be seen by or
>forwarded to the right set of eyes.

Thousands of us did that back in 1990 and 1998. FCC saw our letters, emails and arguments and said they were inadequate reason to keep the code test. In 1990 FCC said the reasons were inadequate for VHF/UHF ham licenses. In 1999 FCC said

the reasons were inadequate for any ham license.

The ONLY reason FCC kept Element 1 is S25.5. They said so themselves, more than two years ago.

I think that part of the reason FCC keeps lowering the requirements (code and written) for a ham license is an attempt to license more cbers and freebanders, in the hope that they will operate within the law rather than outside it.

And here is why you probably could sue in court to avoid paying charges which could not be justified - that you were being forced to sign a contract under extreme duress. I'm no lawyer but I did take a few business law courses in college and there was a principle that said both parties to a contract must be free from duress and sign willingly and of their free will. Also that both parties must understand what they are agreeing to. A "standard admission form" thrust under your nose with one hand while stuffing the pen for you to sign it, giving you no time to read it, while you're in agony and anxiously awaiting urgent medical treatment wouldn't seem to meet the legal qualifications for a valid contract.

Hospitals today have a bad habit of gouging the insured, evidently to make up for some of their losses from being required to treat so many who are not. That doesn't make it right, justifiable, nor legal.

Dick

Phil Kane wrote:

> You DO read the statements which the insurer sends to you when they
> pay the doctor's bills and compare them to the bills that the
> doctor sends you, don't you?

T'aint ever that simple, Phil. I have an unsettled case that illustrates. Last spring I spent 2 1/2 days in a hospital out west, far away from home. Later I received a letter from the hospital, no the doctor, saying they had billed my insuror, and that I was not getting a bill at this time, but here is a summary of the charges. Listed was what was actually provided, at rates that seemed about right, but then the last line was a charge for "additional diagnostic services" that was three times the total of all earlier lines. So my insurer, after negotiating the entire charge down by 10%, paid it all -and we're not talking a trivial sum here, either. Many $K. Meanwhile the doctor's fees were very much in line, and billed separeatly.
I called the insurer and said I was rather certain that the bill was very much excessive for the care provided, and the insuror said that I would need to obtain a copy of the bill, and that any excessive charge that I could identify could be recovered by the insuror. So, now I'm left with the job of going back out west to that hospital, getting a copy of all the charges, and determining what part of that "additional diagnostic services" they can and cannot justify.

Just because they're upstanding citizens doesn't mean they aren't thieves,. I'm thinking I might just take an attorney with me to see the folks at the hospital when I do go.

>A typical reaction from the sloop-foreheaded
>neanderthals we are so abundantly blessed with
>in this hobby called ham radio. Just why is it this
>this hobby seems mentally stuck in the 1950's?

Several reasons. Most of the people in Ham Radio are of the age of the 50's. Old, mostly male hobby. Many have spent too much time behind a radio with little physical exercise. Many should take up jogging instead of the normal pizza and beer consumed.

No sense of purpose except to maintain the Ham religion, such as Ham oaths and secret societies. The use of the word "Ham" to describe oneself. Some find it degrading to call themself a "Ham". Others do not identify with the "Ham" identity and just do not care.

Insistance on Morse code.

The areas recognized should be different. For Contesting, working all states, etc, the emphasis is on coverage, not skill level. Recognition should be for set up time, distances achieved, bands worked(not geographical areas), etc.

Also, many people find contesting to be boring. Hams seem to get a thril from it, however. Hams should have more interesting activiites to get more people interested.

>Reminds me of the kind of guys you see at hamfests in penny-loafers
>and shorts who want to bid you down to 25 cents on a 50 cent item.
>Cheap, crotchety old white men who's wives wish they would drop dead.

Hams gladly overpay for ticket prices, room rentals, food. Hams happily accept lower quality food and/or higher prices. They don't seem to mind overpaying as long as its a Ham meeting. $10 for breakfasts is too much. $30 meal price for upcoming conference too much so i'll get dinner elsewhere. Hams are so obcessed with the event, they overlook being overcharged. Seems like with a group, Hams could get better quality food and lower prices than they do.

>(assuming the 2 or 3 "SK-Vultures" at the Club don't beat
>a path to the door first to try and get it all for a song so

If it's "Lance Bass Talks To Aliens From ISS Via Ham Radio", then it would be "tabloid mentality".

If it's "Lance Bass Talks to Teens From Space Station", it's a very positive media hit for Amateur Radio.

Please try to keep your priorities straight. This has the potential to be VERY positive.

An entertainer would be an appliance operator. Appliance operation would not be a benefit to Ham Radio. Possible benefits could include the service aspect of Ham Radio, however.

I advocate the technical, educational, and fun aspects of Amateur Radio, which is missing from many "Ham" clubs, so I feel that I could help Ham Radio.

> We substituted YOU for a rational human being...The otehr trade seems

Your sentence does not make sence. Also, A rational human being can respond to a point without attacking someone else

>>Britney Spears endorse Ham Radio? Unlikely
.>Why? She endorses other products on TV. What would be different about
>Amateur Radio?

Amateur Radio would have to fit in with the image she is trying to project. Ham Radio itself should have positive value for it to be endorsed. A bunch of low lifes hunting bands would not help her image. Also, no self respecting person would like to be called a "Ham".

> Didn't it seek to make that which is now illegal (working dx beyond 155.3
kM)
> legal?

While correct as written, your question oversimplifies the subject. I'll
restate to reduce any further chance of misinterpretation. To attempt to
change any objectionable rule/law using proper legal protocol in not only
legal, but arguably a citizen's duty. In the ARRL's statement objecting to
the removal of the 155.3 mi. limit, it stated that allowing DX on the CB
would encourage the use of illegal amplifiers. Your own reference to the
"freeband" implies the association of out-of band operation. Nothing could
be further from the truth. RM-9807 was a noble effort to legally remove the
155.3 mi. limit rather than simply ignore the rule. I must say, Jim, that
I'm somewhat surprised to this angle of attack (metaphorically speaking)
from you. I think we both knew to what "illegal operation" I was referring.
Given the calibre of your past posts, this was a bit of a surprise indeed.
>
> >Let's no punish all drivers for the misdeed of a few.
>
> Let's not make the "misdeeds of a few" legal then, OK?

Again, I'd hardly call RM-9807 a "misdeed." To be honest, I'd hardly
classify the violation of the 155.3 mi. limit as a misdeed. That doesn't
mean I condone ignoring the rules in place though. Any person(s) who find
any rule/law to be sufficiently objectionable should work to change said
rule/law using any and all legal means at their disposal...in this case, a

RM proposal.

Understood, however I must plagiarize another poster's words in response to
the "original basis and purpose" argument re. RM-9807.

"Everything in life evolves. If this were not so, there'd be no
reason to build four-lane highways where dirt roads once were. Like it or
not,
this is what the citizen's band has evolved into...and quite frankly, let's
not
forget who the band's was named for. It was placed in a portion of the RF
spectrum that supports worldwide propagation, bad move to begin with. If the
"citizens" wish to redefine it, let them <do so> without interference.
Amateurs have
their own mess' to contend with. Deal with that first before meddling in
someone's elses affairs...even if your pride's bruised that they might
legally
obtain one of your "privileges" without the associated "rites of passage.""

Exactly. Reread the sentences above. They are in reference to the code test
"barrier" argument only. Re. CB, I have a niece who was interested in radio
after viewing my shack, but not enough to be "bothered with the license
thingy." I started her off with a TRC-485 40 ch. SSB rig. Once she started
hearing S.A. pouring in on a regulat basis, (She's fluent in spanish.) her
interest level picked up to the point where she asked "Ok Tio, <Uncle> tell
me more about the "license thingy." Did she violate any rules? Nope, but DX
on CB helped spark yet another soul's interest in AR...much the same way it
did mine so many years before. (Except I "inhaled." <ggg>)

> Radio. What do they say about guys that listen to "boy bands"?

Were the Beatles and the Stones "boy bands"? Anyway....
There's always the girls. We have had YLs for years. Could be a way to
have more girls get interested in things technical. High schools with ham clubs
could
host ham radio QSOs with Lance Bass when he's in the area
with a 2m HT or a mobile rig in his limo. And be control ops when fans of
his band (non-hams) want to talk at the event at the ham radio club.
Of course a sked would have to be arranged ahead of time, and be sure
there is no failure to QSO. Also tell the kids that, no, Lance cannot sing
via ham radio. FCC rules forbid it, so please don't ask him to. And
2m FM should sound sufficiently different than 11 meter CB that that be
less confusion of ham radio vs CB radio. And a 50W mobile 2m rig will
have more range than a MURS HT.

> >2. If Britney Spears (pop singer and ex-girlfriend of Justin

I think we could do something with this. No, we won't suddenly get 10 million
kids as no-code hams on 2m, but we'd get some exposure. Maybe a few thousands
of new hams.....

With all due respect you are proving it by suggesting a
"duress" avoidance. Very rarely does such an argument succeed.

The thing most likely to invalidate a contract term is if it is
against public policy, and other than malpractice that's what the
meat of most of the lawsuits is.all about.

> Hospitals today have a bad habit of gouging the insured, evidently

There's nothing unlawful about setting rates to cover expenses. You
are free to shop araund for your medical provider. I've been with
the same major HMO - which has its own medical group and owns its own
network of hospitals and refers to major medical centers at no charge -
for 35 yrars and have been very satisfied with the services
that I and my family have received compared to the rates that I pay.

"Right" and "justifiable" ate things that the clergy are best
equipped to argue.

It isn't, but thanks, Phil. I'll check the local bar assn. for a referral.

From my standpoint it's the longterm effects on the affordability of health insurance for individuals (I'm in a group which operates its own plan and hires an administrator) that's at stake. Rumors emanate from he head shed about drastic rate increases, in the hundreds of percent range.This sort of abuse is a large part of the cause.

Dick

1528. Are yellow pages allowed on 2 meters? ARPS -> Yellow Pages

Newsgroup: rec.radio.amateur.policy
Date: 2002-09-30 12:37:01 UTC
From: johnfofawn@hotmail.com
Message-ID: <d89364bd.0209300437.73b1e24@posting.google.com>

Hi,

Here is what I'm thinking:

I set up my basestation 2 meter radio along with my computer. It listens on a particular frequency and any time someone sends an APRS packet to me, I'll have the computer look up the 5 closest restaurants to them and then read back the restaurant names and addresses. I have all the code required to do this, I just need to write some glue software to make it all work together. The text-to-speech routines I use are very easy to understand.

Would this be allowed, or would this be commercial use?

If this is allowed, I could see adding a DTMF interface whereby a user could put my service into different modes for restaurants, shopping centers, etc.

What do you think?
John

Other than my transposing the letters in "other" it made "sense". (your own typo noted)

And you entered this thread insulting if not attacking, so stow your self-righteousness.

>Also, no self respecting person would like to be called a "Ham".

I don't mind. What's YOUR problem? "Ham(s)" have an nine-decades-long record of public service and community responsibility. Nothing there to be ashamed of. If it's just the name you object to, I am sure simply calling them "Amateur Radio Operators" would get past the spin doctors.

Besides...When I see what some actors and personalities DO "endorse" when properly funded, I doubt they'd have a hard time doing it for "us" if amply compensated.

If not, it's the same silly, poorly organized rantings. maybe a newsgroup
version of West Nile...???

>The use of the word "Ham" to describe oneself. Some find it
>degrading to call themself a "Ham".

Some consider certain other words to be denigrating and socially abhorent
while persons to whom the word is normally associated makes millions reciting
it in "pop-culture" music.

So what's yor point?

>Others do not identify with the "Ham" identity and just do not care.

You're obviously onme of them. What's YOUR callsign? Or is this just
another mindless ex-radio clerk troll?

>The areas recognized should be different.

They are. You are just not paying attention.

>For Contesting, working all states,
>etc, the emphasis is on coverage, not skill level.

Oh? It takes no skill to achieve DXCC, WAS, VUCC...???

>Recognition should be for
>set up time, distances achieved, bands worked(not geographical areas), etc.

And what is YOUR "experience level" in Amateur Radio that we should be
swayed by what YOU think "should" be the way things are done in any particular
discipline of participation?

>Also, many people find contesting to be boring. Hams seem to get a thril from
>it, however. Hams should have more interesting activiites to get more people
>interested.

So contesters should not contest becasue YOU find it boring?

There are as many "interesting activities" in Amateur Radio as there are licensees. Amateur Radio is whatever YOU put into it. I cannot make it any more or any less interesting for you if what >>I<< am interested in is NOT what you are interested in.

>Hams gladly overpay for ticket prices, room rentals, food. Hams happily
>accept
>lower quality food and/or higher prices. They don't seem to mind overpaying

>long as its a Ham meeting. $10 for breakfasts is too much. $30 meal price for
>upcoming conference too much so i'll get dinner elsewhere. Hams are so
>obcessed
>with the event, they overlook being overcharged. Seems like with a group,
>Hams
>could get better quality food and lower prices than they do.

Hot flash, Hot Rod...the overpriced meal/room/ticket, etc is NOT unique to the Amateur Radio conventioneer. That's why conventions are a multi-billion dollar industry in the United States.

You wanna see expensive? Investigate the "fees" associated with the Nursing or Emergency Medical Services industries. EMS Magazine has a conference in Nashville, TN this weekend with registration fees in the hundreds of dollars.

NOTHING you cite is unique to Amateur Radio.

However your willingness to try and make it appear as though it is makes me wonder what your true agenda is in this forum. Obviously facts and informed opinion are not.

It depends. As long as you make no money from the service, and you make no money from any of the businesses (i.e. they don't pay any advertising fees) then it should be legal. No different from an out of towner getting on the local repeater and shouting "hey, where's a good place to eat?".

73's,

Robert / N4IXT

You're probably right about that.

>I'll
>restate to reduce any further chance of misinterpretation. To attempt to
>change any objectionable rule/law using proper legal protocol in not only
>legal, but arguably a citizen's duty.

I disagree about the "objectionable" part. The mere fact that a rule or law is
"objectionable" or not liked does not mean it should be attacked or removed.

How about this:

To attempt to change any rule/law using proper legal protocol is perfectly
within the rights of any citizen.

> In the ARRL's statement objecting to
>the removal of the 155.3 mi. limit, it stated that allowing DX on the CB

>would encourage the use of illegal amplifiers.

True, but that's ionly part of the picture. There are many reasons why removing the distance limit is a very bad idea.

>Your own reference to the
>"freeband" implies the association of out-of band operation.

Are you saying there is no association between cb and freeband? I disagree!

>Nothing could
>be further from the truth. RM-9807 was a noble effort to legally remove the
>155.3 mi. limit rather than simply ignore the rule.

But what would be the effects of removing that rule?

> I must say, Jim, that
>I'm somewhat surprised to this angle of attack (metaphorically speaking)
>from you. I think we both knew to what "illegal operation" I was referring.

Sorry if I wasn't clear. The illegal operation I refer to is the use of cb for purposes other than those intended, and the use of non-approved equipment.

>Given the calibre of your past posts, this was a bit of a surprise indeed.

Sorry if I wasn;t clear.
>>
>> >Let's no punish all drivers for the misdeed of a few.
>>
>> Let's not make the "misdeeds of a few" legal then, OK?
>
>Again, I'd hardly call RM-9807 a "misdeed."

Nor would I. But I don't see how removing the limit would do anyone any good.

>To be honest, I'd hardly
>classify the violation of the 155.3 mi. limit as a misdeed.

I would. The rule is there for a good reason.

> That doesn't
>mean I condone ignoring the rules in place though. Any person(s) who find
>any rule/law to be sufficiently objectionable should work to change said
>rule/law using any and all legal means at their disposal...in this case, a
>RM proposal.

No argument about the right of citizens to petition for changes in the rules. But that right includes the rights of other citizens to disagree with the proposed change.

>> >(Although the insurance carriers routinely get away with that via
>> >increased rates.)

>

>Ouch!

'zactly

>> >> I'd say it was a well-founded opposition based on historic evidence.

>> >I'd agree with you if I truly subscribed to the "punish 'em all"
>> >mindset.

Let's talk about the "punish 'em all" mindset. Since 1978 it has been illegal to buy, sell or manufacture external RF power amplifiers for the 10 meter ham band. Hams can build or modify exactly one amp of a given design per year. Amplifiers that do not meet certain rules are also prohibited, even if they do not cover 10 meters.

These rules hamper law-abiding hams. But those rules do not exist because of what hams do, or have done in the past. Those rules exist because of the widespread use of amplifiers by cbers and freebanders. It was a big problem 25+ years ago, and it's still a problem. And I doubt the rules have had much effect on cb or freeband.

>> It has to do with the basis and purpose of various services.
>
>Understood, however I must plagiarize another poster's words in response to
>the "original basis and purpose" argument re. RM-9807.

And I'll respond to this person's comments.
>
>"Everything in life evolves. If this were not so, there'd be no
>reason to build four-lane highways where dirt roads once were.

Classic bromide dragged out to justify any change. Has no bearing on the subject.

If we're going to talk about evolution, then the use of 27 MHz AM or SSB for a land mobile service is a dinosaur. It should become extinct. The allocation of those frequencies 45 years ago was based on the technology of that time. Today, modern VHF/UHF channelized radios are so inexpensive and high-performance that there is no reason to continue the 27 MHz allocation. Instead, that service should evolve to VHF/UHF.

>Like it or not,
>this is what the citizen's band has evolved into...and quite frankly, let's
>not forget who the band's was named for.

The mere fact that something has evolved a certain way does not make it right or justify rules changes that would further that evolution.

>It was placed in a portion of the RF
>spectrum that supports worldwide propagation, bad move to begin with.

So we should compound one mistake with another?

> If the
>"citizens" wish to redefine it, let them <do so> without interference.

Are not the views of ALL citizens to be heard on the issue?

>Amateurs have their own mess' to contend with.

Are not most US amateurs also citizens? Don't they have the right to be heard on this issue?

And what "mess'" do amateurs have, compared to cb? Is it not true that many of ham radio's problems are the result of attitudes and problems imported from other services? (I can give you lots of examples of this).

>Deal with that first before meddling in
>someone's elses affairs...even if your pride's bruised that they might
>legally obtain one of your "privileges" without the associated "rites of passage.""

In other words, the views of hams should not be aired, even though the rules change could hurt ham radio.

>
>I'll keep my fingers crossed...re a multitude of things related to this
>whole "mess."

Me too, but I don;t hold out any hope for S25.5.

What we hams need to be doing is to work up a sound proposal for what the US ham license structure and requirements should be if/when S25.5 goes away. FCC's not gonna do it. I don't see ARRL addressing the problem at all.

>Take care Jim, perhaps we can do Miller's Smorgasbord with the

I basically agree with Robert's view. BUT, you will get plenty of advice from local hams who think otherwise. You will get a LOT of heat, I don't think it would be worth the hassle. But I would be astonished if Charlie came knocking at your door.

Difference is the out of towner asked. Transmitting unsolicited
information that has nothing to do with amateur radio sounds like
'broadcasting' to me (Why not play your favorite music?) and IIRC
broadcasting is illegal even if it's not done for profit. My 2 cents.

More likely shared than taken away completely. Isn't there
a outstanding law which says that, if amateur spectrum is reassigned
to another service, the FCC needs to find equivalent spectrum
elsewhere to replace it? The FCC seems to prefer to avoid this
and so prefers to use sharing, often with Part 15 devices as you
point out, to make better use of the bands which hams underuse.

I agree with this, though it is worth while pointing out that it
doesn't seem to be fear of exams or old farts that keep these
operations under Part 15 rather than Part 97. I'd even suggest
that a disproportionate number of people (i.e. more than 1 in 50,
the fraction of the US population with an amateur license) playing
with this stuff are hams, who could run this stuff under Part 97
if they wanted to. The reason it remains a Part 15 hobby almost
exclusively is that high-speed data is really only interesting, both
to users and to experimenters, if there's a connection to the Internet
somewhere, and the lack of control of users, content and encryption use
which this implies makes interesting use under Part 97 essentially illegal.
It is not surprising that Part 15 gets the hobbyists when Part 15 is
interesting while Part 97 is boring.

I have noticed the ARRL becoming a bit hostile to Part 15 uses, however,
complaining about interference and interference potential even on bands
that amateurs only seldom use. I haven't figured out whether this is

a side effect of opposition to proposed and actual use on bands amateurs do use frequently (e.g. 80 meters, 440 MHz), the fact that some of this use is commercial, or the fact that some of these services are attracting hobbyists who, in prior decades, might have become hams instead, but if the latter reason is true I wish they'd instead try to address the usage and content restrictions in Part 97 which make experimentation there so unattractive in comparison.

Wasn't there an Amateur Radio Spectrum Preservation Act passed a few
years ago (perhaps as part of another bill) which told the FCC that
any spectrum removed from the ARS had to be replaced with equivalent
spectrum elsewhere? I've seen this cited in ARRL FCC filings.

The FCC seems to much prefer to "refarm" amateur spectrum by adding
Part 15 users to it rather than taking it away altogether. I'll bet
that, while 222 MHz may be in danger, the danger is not having the
band removed from the ARS, but rather from having other users added
to it.

Never made it to the President's desk for signature. Like so many other
bills tht get startred, it was attached to soemthing else and then stuffed in a
pidgeon hole.

THIS is why we can't simply leave it to a few people or one organization
to do. Not that they aren't doing thier own best to make it come to fruition,
but that it takes support from as many persons as possible to make it happen.

I think you hit it, Dennis. A Part 97 system cannot be used for eBay, advertising or porn, but a Part 15 system can be (not sure about the porn part, tho). Filtering the content automatically is not practical, yet.

Over the past several years there have appeared claims here that Amateur Radio would be 'saved' by using it as a gateway to the 'net. How the content would be filtered was never described, even when the proponents were asked directly.

>It is not surprising that Part 15 gets the hobbyists when Part 15 is
>interesting while Part 97 is boring.

What it really comes down to is whether the focus is on the medium or the message. What powers the 'net today is mostly fiberoptics, not RF. WiFi just gets you the last mile, or maybe the last 100 feet. That's all.

>unattractive in comparison.

I think the main reason is the setting of precedents. Part 15 verbiage says that the Part 15 devices must not cause harmful interference to licensed users, and must accept interference from licensed users. But in real life that's often overlooked, and the enforcement falls on the licensed service. Here are two examples:

Some time back, a Part 15 system was marketed that used a frequency on 80 meters. If you lived close to one of those things, it would chew up a big part of 80 over quite an area. Through the efforts of the ARRL, in the form of rrap's own W1RFI and others, the manufacturers shifted frequencies and offered to replace offending units. But the League had to hold the company's feet to

the FCC fire first, generating sound data and presenting to FCC and the company. Merely saying "Hey, your product is causing harmful interference" won't cut it - even though we are the licensed service and the Part 15s are not!

ARRL has been trying to get amateur allocations at 136 kHz and 5.2 MHz. Representatives of companies proposing Part 15 communication via power lines have opposed one of these allocations (I forget which one at the moment) - because Part 97 hams might interfere with their Part 15 operation, which is not even authorized yet! Talk about cart-before-the-horse - they're saying that the licensed service must not interfere with the unlicensed service, which is the exact opposite of the whole premise of Part 15.

There is also the claim by a utility that they were not responsible to clean up interference to a ham caused by one of their transformers. Something about how they wanted the ham to pay for it, and they were not responsible for harmful interference to individuals, just to the ARS as a whole! Riley hisself had to go after them.

If we allow precedents to be set on some bands, pretty soon we will be overrun with Part 15 and Part 95 folks citing those precedents . Then it will be too late.

As far as the content restrictions of Part 97, what specific changes could be made that would make a difference? If commercial content is allowed, what's to prevent companies from using 2 meter repeaters or 20 meter PSK31 to conduct business?

I hope the ARRL doesn't value your opinion, because it is wrong
in this case. It's not broadcasting, because someone has to trigger the
response i.e., two-way communication. Second, it is completely legal
if you are not doing it for profit. This is the famous ordering a pizza on
a phone patch, that the FCC doesn't have time for, and is not regulated.

Did you graduate in the bottom 10% of your class, or did you get a
correspondence degree? Sheesh...

Nailed? By who? and for what? Gimmee a fuckin'
break!
Bullshit! Get a reality check Phil! K1MAN is still on the
air running unattended transmitters all day, splattering up and
down the ham bands. K1MAN has been thumbing his nose
at the commission, daring them to do something, and so far
the commission is hiding, pretending K1MAN doesn't exist.
And you can bet plenty people know Riley has been given
orders to leave K1MAN alone.

Hey Steve (Troll) K5OKC ...

Read Part 97.7 at

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97&SECTION
=7&YEAR=2001&TYPE=TEXT

Sec. 97.7 Control operation required.

When transmitting, each amateur station must have a control operator.
The control operator must be a person:
(a) For whom an amateur operator/primary station license grant appears
on the ULS consolidated licensee database, or
(b) Who is authorized for alien reciprocal operation by Sec. 97.107 of
this part.

Packet doesn't get a break on this - and ISS does have a control operator -
the rules say nothing about where the control operator has to be.

Read some of the FCC enforcement letters - they always nail people on lack
of a control operator.

Now go back to CB where you came from - the Control Operator principle is
something you should have learned in the first few minutes when you were
studying for your HAM license.

Stupid you are ASSuming.

I clealy said/quoted nothing about the control operator having to be at the
control point.

Go troll elsewhere Steve!

Why not put the entire section up there? It still says "Each amateur station must have at least one control point."

Sec. 97.109 Station control.

(a) Each amateur station must have at least one control point.
(b) When a station is being locally controlled, the control operator must be at the control point. Any station may be locally controlled.
(c) When a station is being remotely controlled, the control operator must be at the control point. Any station may be remotely controlled.
(d) When a station is being automatically controlled, the control operator need not be at the control point. Only stations specifically designated elsewhere in this part may be automatically controlled. Automatic control must cease upon notification by an EIC that the station is transmitting improperly or causing harmful interference to other stations. Automatic control must not be resumed without prior approval of the EIC.
(e) No station may be automatically controlled while transmitting third party communications, except a station transmitting a RTTY or data emission. All messages that are retransmitted must originate at a station that is being locally or remotely controlled.

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of September 30, 2002:

Novice - 36,705 (decrease of 12,624)
Tech - 244,464 (increase of 39,070)
Tech Plus - 75,618 (decrease of 53,639)
General - 139,095 (increase of 26,418)
Advanced - 84,648 (decrease of 15,134)
Extra - 102,791 (increase of 24,041)
Total - 683,321 (increase of 8,529)

>

Obviously the 220MHz allocation is of great interest to those in the US but it's prospective demise is just indicative of a worldwide situation where governments see the prospect of selling of the bands above 30MHz domestically to the highest bidder.

Latest example of prospective band erosion is the withdrawal of the 70cm amateur band WORLDWIDE. If this goes through then I guess the wall will tumble and no band will be safe. Maybe this will be the price of harmonisation of 40m and opening of new HF slots for amateur radio.

Below is an extract of a posting from the South African national society.

Regards all

Alec Wood M1BNK
Teesside UK

******EXTRACT FROM QNEWS (South African Radio League, SARL)********

70-CM BAND UNDER THREAT AT WRC-03

It has come to the attention of the South African Radio League, SARL that the threat to the 70-cm band WORLD WIDE is once again very real. The SARL has just received a discussion paper which will be tabled at the World Radio Conference next year (WRC-03) which directly targets the portion of 432 to 438 MHz for exclusive use by the planned Earth Exploration Satellite Service (EESS) due to be launched soon.

If this proposal is carried at the World Radio Conference next year it will see this portion of spectrum allocated on a worldwide basis and this spells the death knell of all 70-cm operation.

The SARL is engaged in urgent talks with the SA regulatory body, ICASA, and other interested parties to try and convince them that this would be a severe blow to amateur radio.

The section of the proposal and the motivation is as follows:

Agenda Item 1.38:
'to consider provision of up to 6 MHz of frequency spectrum to the Earth exploration-satellite service (active) in the frequency band 420-470 MHz, in accordance with Resolution 727 (Rev. WRC-2000).'

Background.
According to the United Nations Conference on Environment and Development (UNCED), Rio de Janeiro, 1992, there is an urgent need for assessment and systematic observations of forest cover and rate of forest degradation in tropical and temperate regions. Active space borne sensors (Synthetic Aperture Radars (SARs) are needed to enable the monitoring of forest biomass.
Systems operating on frequencies around 450 MHz can penetrate the canopy of forests, and have the capability to determine the ground-trunk interaction and are in the context of forest cover information of particular importance.
Systems operating at 1,3 GHz, or higher frequencies cannot penetrate the canopy.

The spectrum around 450 MHz is also optimal for monitoring of continental ice and for monitoring of vegetation and soil surfaces for desert and tropical areas.

Probably, as the SARL are saying, "never before have we needed as many amateurs as possible to join and illustrate to the regulatory authority that strength lies in numbers.'

No matter WHERE in the world your tuned to this QNEWS edition, NOW is the time to join YOUR National Society!

1562. Re: Stolen Vehicle Tracked With Satellite Feature

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-02 00:54:04 UTC
From: K&#65533;HB <KAYZEROHANDSOMEBOY@ELECTRICSMOKE.NET>
Message-ID: <Msrm9.3660$OB5.321140@newsread2.prod.itd.earthlink.net>
Source record: 53379

K4YZ asks:

> And at the same time, I wonder if that feature was known to the buyer? I
> assume it was "OnStar" or similar service. I wonder if the vehicle can be
> tracked WITHOUT the owners knowledge or consent?

Three of my vehicles came with OnStar. I didn't specifically order the option, but it was 'standard' on the trim level of those particular vehicles.

Yes, OnStar *COULD* track my vehicle, but unless I ask them to, they don't give a rats ass where it is.

OnStar consists of three 'sub-systems'.

1. A GPS receiver.
2. A 'built in' hands-free cell phone.
3. A vehicle assistance subsystem.

The GPS receiver is just that and nothing more. It is NOT an APRS-like system and does not provide an unsolicited running data stream of your position via radio.

The cell phone can be used just like any other cell phone to place calls and receive calls. It also has a pre-programmed pushbutton to call the OnStar operations center. When you do that, the GPS system provides a data stream so the operator can tell where you are and in what direction you are traveling. Now lets suppose you are hungry -- they can direct you to the nearest McDonalds, Taco Bell, or whatever cuisine you desire. Suppose you are tired -- then can direct you to the hotel of your choice and call ahead for reservations. Suppose you are lost in a strange city -- they can direct you to your destination. Suppose a passenger seems to be having a heart attack -- they can direct you to the nearest medical facility, or summon EMT help and direct them to your position.

If you're in an accident and your air bag deploys, the system automatically makes a phone call to the operation center and reports your position. They attempt voice contact to see if you need medical help. If you do not answer, they dispatch emergency help to your location.

If you call them and report your vehicle stolen, they can make a 'silent' phone call to gather the GPS info, relay it to law enforcement agencies, and simultaneously disable your vehicle.

If your car starts running rough 'in the middle of nowhere' they can run diagnostics, determine the probable problem and direct you to the nearest appropriate service facility.

Hans

>
> Don Woodward
> KD4APP

Packet radio must have a control operator (usually the callsign given in
the from or via address), but the control operator does not have to be
at the control point.

It is entirely possible to have a packet radio station on the air while you
are asleep, and 100 miles away from the control point.

Thus there is no legal restriction to the proposed "Yellow Pages" idea.

Phil, perhaps you'd best explain. I am NOT a lawyer and in this case you ask one (and if you have to ask, it is likely a no-no). My understanding is that the amateur cannot make any money AND THE BUSINESS CANNOT MAKE ANY MONEY. To me, this would be 'advertising', not the same as asking 'where's a good place to eat'. It certainly isn't the same as hitting the patch and placing an order for pizza. I'd certainly not try it, but would appreciate it you could explain the correct reasoning behind this (my news server has been down for a couple of days or I'd have jumped in this sooner).

WNV is far too good an operator to tolerate LA(jg). For all his faults (and he's displayed all lot of them), Don has to be acknowledged as one of the top 20 operators to ever stroke a Vibroplex. I'd like to see him team up with Martti (OH2BH) and Elvin (JA3CZY) and do a few trips. What a dream crew that would be.

Besides, I have several T5 cards. I still need one for FO8M though.

The trip could actually be a good thing. Brian P Burke would have
someone on hand to show him how a pileup works.

>

Well, Dave, unfortunately for you, I am open to discussing anything and any twist it may take on the way. Now, as to your specific remark above: diversity training, in every seminar I have ever been to, has always *included* being sensitive to the perceptions of other people. Ever hear the saying "perception is everything"? While the specific phrase "regardless of what the book definition may be" has never been said, it has certainly been implied.

> >
> > And, I don't believe there's been a misuse of the word, Dave.
>
> That's right and you choose not to look up the word. Tough.
>

Like I said, Dave, I haven't said I would not look up the word. I haven't said I did not look up the word. You are claiming omniscient powers there, for you to state emphatically that I have not looked up the word. Whether I look up the word or not does not change the fact that I know me well enough to know that I don't generally live by a book. Book definitions are grand for folks like who need them. But, for folks like me, they are not much more than a reference--a beginning.

> >
> > Dave, that's your mistaken impression. I speak for no one but myself.
I

And, what if it is? I believe God gave us the sensibility to "just feel" something. Don't you use the gifts you've been given?

> >
> > Actually, I'm quite disappointed in people like yourself, Dave.
>
> First, work on you. Then you can work on me.
>

Unlike you, Dave, I don't consider myself a God. It is no more up to me to "work on you" than it is for you to determine that the way I think and/or feel about something is all wrong. In the grand scheme of things, it is more up to me to learn tolerance for folks such as yourself. See? the reason I left this newsgroup was because I resorted to acting just like you do, and others like you. And, unlike you, I think it would be very presumptuous of me to attempt to belittle and degrade you for the way you think or feel. So, you see? In my eyes, you are far more immature and incapable of acting in a quality manner, than am I.

My responses to you have been nothing short of inquiries as to why you feel so affected by the way I think about something, and a dialogue on our interpretation of something. My negative responses to you, if you will read back, have been nothing more than negative feedback and resistance to your attempts at denigration toward me. I haven't, and won't, look back on the posts, but I don't think you'll find much more than that. I admit I am having an extremely difficult time understanding how live so much out of a book...but that is actually my problem, isn't it?

> >

>
> We're not defining "life". We're defining "terrorism". By the way, my
> dictionary doesn't say anything about "what goes beyond the definitions
> in a book" under "life".
>

We're not defining anything, Dave. We are discussing what terrorism is--to you and to me. To you, it is what you find in a book of definitions (a dictionary) and not much more. To me, it is much more than that. Add to that, that I want to know how others think of the term--especially those whom I elect to make laws that impact my life. I want to know if my government makes some creepy law for fighting terrorism, what is *their* definition of terrorism. For, as much as you seem to think everyone lives by book definitions, I am sure you can figure out that our politicians don't look things up in a dictionary. In fact, most--if not all--Bills and Laws passed include a thorough discussion of definitions.

For example, I consider it quite terroristic, what racist groups do to other people. I consider it an act of terrorism upon others when those groups *act on their feelings and beliefs*. HOWEVER...and make no mistake about it...I don't think there should be any attempt at outlawing, here in the

United States, the voice of another just because I don't like what they do when they aren't speaking. My reference there is to the horrible acts of terrorism committed on others in the name of their beliefs. So, while I consider it quite terroristic--I wouldn't want to *mistakenly* allow my government to enact legislation which could in the future be *INTERPRETED* to mean that those types of groups will be punished or otherwise harassed.

If we are going to "count" the impact of a terroristic act, just add up how many people have died, in the United States, at the hands of prejudice. One is too many, and more is a true tragedy.

> >
> > I can't help that.
>
> Right. Must be a real bunch of boobs if they can't see that "terrorism"
> is really what *you* say it is.
>

I have no idea. I am simply stating that I cannot help that you don't know others who define terrorism beyond what is in a book. that they are boobs would remain, once again, a judgmental opinion of yours--exclusively yours between the two of us.

>

You don't seem to understand, or you choose to ignore, that what "it" is to me *is* important. And, what it is to others is important to me as well. Heck, what it is to you is important to me. At least I know that if you are ever my governmental representative, you won't be making stupid laws that may have a negative impact on American citizens.

That I carry a definition farther than what is in a book for its meaning, may be incorrect for you, Dave. But, it's not incorrect for me. And, once again...my opinion and regard is every bit as relevant as yours. In fact, right this moment, it's *more* relevant than yours.

>

Here, you are stumbling over yourself so much, I cannot even get hold of what the hell you are trying to say, Dave. I have given you examples of the things I consider terroristic. I used the word terroristic to express what I feel or wish to convey. Its meaning to you is in the dictionary its meaning to me is much more than that.

> >
> > 'Scuse me???!!!??? They sure have. Everything, including the meaning,
has
> > been debated for centuries.
>

I actually don't need proof of the above. However, try a few bible study groups, seminaries, etc. Anywhere that theology, and certainly religion, is discussed and debated. I am really not sure how you believe that the meaning of what belief/faith and Jesus, God, etc., is has not been debated for centuries. Biblical wars have erupted over the debates and continue today.

up,
> > I'll be out here living life.

>
> Lucy Van Pelt would be proud of you. I wouldn't want you to screw up
> your life with anything like a definition, Kim.
>

Thought you didn't rely upon imaginary heroes. You mean with the same definition as *yours*, Dave. It doesn't screw up my life to think differently than you. It must be screwing yours up though, with this vehement reaction you are having to the idea of someone thinking outside a book definition. Goodness, can you imagine how boring this world would be if we all let a d-i-c-tionary d-i-c-tate how we all think about something?

>
> > Ya know, Dave? If that means I'd be such an open book as yourself, no

>
> Dave K8MN

Now you're getting somewhere. Oh, by the way: You'd be the open book, Dave. If you limit yourself to the dictionary definition of things, then all I need to do to find out how you think is look in the dictionary. In fact, your intercourse is no longer needed.

I believe in one less god than you do.

Faith: The ability to believe a fable that you know to be absolutely false.

Those of us who are not members of your organized cults (whatever their
size) are sick and tired of being victims of your wars with other organized
cults.

This ground has been covered in HUGE detail back in 1982-86.

The control operator is not required to click a button to allow
each packet to pass through the system he is controlling, but
only to be able to shut it down when notified there is a problem.

I know of at least one case where a control operator shut
down a system 2000 miles away, using an HF link, when
he discovered a system failure. I know of another case where
a control operator drove 50 miles to pull a breaker on a
failing system. Note that "system failure" might mean "was
passing not allowed traffic" when there were automated
means intended to detect and block such traffic.

No problem if you are sleeping ... someone will wake you :-)

>it you could explain the correct reasoning behind this (my news server has
>been down for a couple of days or I'd have jumped in this sooner).

You are right on target. The issue isn't the "control operator",
it's the nature of the content. Just as a "one shot" patch to The
Pizza Place is OK but conducting business with them on a regular
basis via ham radio isn't, asking "where's a good place to get
....." is OK but having a server respond automatically to every
such contact isn't OK. Section 97.113 of thr Rules may be good for
curing insomnia but it's still "the word". Amateur radio is not
supposed to be a substitute for any commercial service.

True, the FCC hasn't been spending as much time as necessary in
amateur regulation lately, but that's no guarantee that if this type
of stuff starts becoming commonplace the hapless amateur who does
this wom't get nailed.

Of course, the non-lawyers here who are sure that I am wrong must have
spent more than the 30 years that I did in FCC field enforcement and
must have more legal experience in interpreting the FCC Rules for
enforcement purposes (which is what I do for a living).

'Nuff of this stuff....

Being sensitive to perceptions has nothing to do with definitions or
your own inability to properly apply them.

Well, on 2002-09-22 the following exchange took place.

Me: "Save us both a lot of bother. Look up the word."

Kim: "No, Dave. You read your book. buhbye now."

I didn't have any doubt about its meaning then. I don't have any doubt as to its meaning now. One doesn't need to be omniscient when there is Google.
"Folks like you" are out of the loop.

> > > Dave, that's your mistaken impression. I speak for no one but myself.

One doesn't "feel or think" in divining a definition. A definition exists. That you can't or won't use the dictionary definition of a word handicaps you in communicating your ideas.

> In the grand scheme of things, it is

If your eyes work like your brain, you'll foul up the vision as you've fouled up the definition. If you view it as presumptuous of yourself to belittle and degrade me or even Dick Carroll, why have you attempted doing so quite frequently in the past?

> My responses to you have been nothing short of inquiries as to why you feel

> >
>
> Thought you didn't rely upon imaginary heroes.

Lucy Van Pelt is not a hero, Kim.

> You mean with the same
> definition as *yours*, Dave.

I didn't write the definition. The definition exists. I understand the
definition and can use the word "terrorism" as defined.

> It doesn't screw up my life to think
> differently than you.

No, that isn't what is screwing up your life.

> It must be screwing yours up though, with this
> vehement reaction you are having to the idea of someone thinking outside a
> book definition.

Can't help it, Kim. I always react to stupidity in this way. You were
just ignorant. After you've been informed of your error and you
continue to make it, it becomes plain vanilla stupidity.

> Goodness, can you imagine how boring this world would be
> if we all let a d-i-c-tionary d-i-c-tate how we all think about something?

It doesn't dictate how you think. It defines words so that we can
communicate ideas in a way which allows all (but you) to understand.

> >
> > > Ya know, Dave? If that means I'd be such an open book as yourself, no
> > > thanks.
> >

How I think isn't in the dictionary but you'll find much about how to
use words.

"nailed!" That's funny...

Did you "nail" them with "interpretation", or only just "hammer" them?

Phil:

The only thing applicable to the "Yellow Pages" idea in 97.113 that I see is "(5) Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services.".

I asked a respected APRS person what he thought of the legality of the "Yellow Pages" idea, and he said "There will be many that say it is ok. there will be many that will think it is the end of HAM radio as we know it...".

You're right on target on the FCC - from what I've read of the enforcement letters sent out by the FCC on HAM related matters, it appears as though in the majority, the investigation that initiated the letters are based on a complaint by someone - another ham/neighbor,etc. and rarely if ever by the FCC. The reason I mentioned "Control Operator" is that lack of control/control operator is a common "catch-all" if the FCC can't find anything else to nail the violator on - kind of like the IRS' infamous "Income Tax Evasion". You are right - control operator is not what will make the "Yellow Pages" application prohibited but it's one issue the person who does implement this will have to deal with.

Yup, and if I recall, the same out-of-touch arrogant
bureaucrat who started that mess, then went to a Little League
baseball game and created a federal case out of a radar gun
the coaches were using to time balls pitched by the kids. No
better example of how arrogant federal bureaucrats have long
forgotten their correct place as lowly servants of the people.
Nevertheless, if I recall, the same wacko bureaucrat died a few
years later of cancer. Strange, how some things come full
circle, eventually.

I agree with Phil but YMMV. Tell ya what: go ahead and do it then have your local ARRL Observer complain to the FCC and see what happens. Worst you'll get is a letter telling you to quit and asking to explain why you did it, followed by a fine or license action. Then you can set us all straight.

The Greatest DXer in the World should go along as well. We could use
some help running up the total, especially with all of them out of
band Frenchmen. That could be a big plus with the budgetary aspect of
the dxpedition.

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

John,

There has been a lot of arguing over this thread, but I had a thought. Forget the FCC for a minute. I recently read that some companies are suing 'Gator'. It seems they advertise and pay for the advertising, but the Gator ads sometimes cover theirs - PLUS Gator's ad may be for a competitor. I've a question. Suppose - just suppose - some licensed amateur receives that packet with those restaurants - and happens to own another restaurant that isn't listed. Just perhaps your biggest problem might suddenly not be the FCC .... BTW, if you're an ARRL member, a lot of the folks in this newsgroup just might turn to page 9 of the October, 2002, issue of QST. That is one heck of a good editorial. I suggest you read it and consider what it is saying.

True. I would fear a capitalist more than a socialist, but
the government is now hiring mostly non-professional
people to run the fascist police agencies, and with laws
that allow them to confiscate and sell your property before
trial, they are giving the capitalists a true run for their money.

I've never been a member of the in-bred mafia there in New
England, although I did write an article for them once, that
was rejected, and I sold it to another magazine. What are
they bitching about now?

The blanket prohibition went away many years ago but the Commish'
still has the authority and obligation to investigate and determoine
on a case-by-case basis if any applicant in qyestion has the
"requisite moral character" to obtain or retain a license.

Sometime they miss the mark widely, but what the hey, it's the full
employment act for us attorneys .....

>An entertainer would be an appliance operator.

How do you know that? People have all sorts of interests. Perhaps Mr. Bass would become interested in the technical aspects of amateur radio. He is/was interested in going into space, so he may very well have a technical bent as well as musical talent.

>Appliance operation would not be a benefit to Ham Radio.

All depends on the type of operation. For example:

>Possible benefits could include the service aspect of
>Ham Radio, however.

Well, there you have it. If an appliance operation includes public service, then by definition it is a benefit to Ham Radio.

In fact, I would bet that most public service operation would qualify as "appliance operation" by "appliance operator" hams. And those hams contribute enormous benefits to amateur radio, and to our society.

The contributions of "appliance operator" hams are significant, and cannot be ignored.

>I advocate the technical, educational, and fun aspects of Amateur Radio,
>which is missing from many "Ham" clubs, so I feel that I could help Ham Radio.

"Fun aspects" includes operating manufactured equipment, doesn't it?

Judging the whole of amateur radio by the few club meetings you may have visited is like the story of the blind men and the elephant.

Perhaps you could help Ham Radio. Do you have a license? What is your callsign?

>>>Britney Spears endorse Ham Radio? Unlikely
>.>Why? She endorses other products on TV. What would be different about

Two-and-a-half years into Restructuring, and we've gained only 8.5 kilohams? Where are all the eager young computer-literate electronic wizards we were promised? We should have seen our numbers almost double by now, in the absence of high-speed code testing! This "growth" is barely what we've seen during the same period in the Pre-Restructuring Era! I'd dearly love to know the average age of those 39K new Techs we gained in the last 2.5 years! Is there any known source of such demographic data regarding the ARS?

I think it's up to the FCC's discretion. I don't think W9WNV was ever convicted of a telecommunications-related crime. Plus he's been a model prisoner for 22 years. Earned a law degree while in the pokey - which means tax dollars were spent to do it.

Howdy, folks.

This message is about my ham radio resource for those who have WIRELESS access to WML pages. In otherwords, if you have a cellphone or pda that can read WML (like an Ericsson or Nokia, and so forth), or, you use Opera (the Webbrowser), then you can access the special format of the radio pages at http://wap.hfradio.org/ - if you browse that page with a normal webbrowser (say, Netscape or MSIE), you will be redirected to the normal HTML pages at http://hfradio.org

With that said:

I've added a large number of additional DX Cluster pages - spots by band, by special interest (IOTA, Mobile, QRP, and so on), announcements and wwv reports. These WML pages are NOT on my normal site (since they are from the DX Summit site). These pages are an interface for WIRELESS browsers to the DX Summit pages. If you are a wireless device user (cellphone, pda) that can browse WML pages, check out

http://wap.hfradio.org/

There are more resources than just the DX Cluster, by the way. I also provide live propagation data, forecasts, and related information.

I'd love to hear how the WML works on your cellphone or other WML device. I have tried to create pages that render well on all versions, and so forth.

Enjoy.

The FCC would ask you to shut it down if they had a problem with
it. Only if you then didn't would the fines and stuff happen.

It's not like the FCC will pounce on you for using the wrong mode
in some subband by mistake once.

Amateur Radio Newsline™ Report 1311 – September 27, 2002

Amateur Radio Newsline report number 1311 with a release date of Friday, September 27th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Unlicensed stations invade the low end of 20 meters and a tower finding in California highlight this weeks Amateur Radio Newsline report number 1311 coming your way right now.

(Billboard Cart Here)

**

INTRUDER WATCH: WORLDWIDE QRM FROM INDONESIA

Unlicensed stations allegedly operating from Indonesia are causing havoc to the D-X beacon monitoring system on 20 meters. Its interference being heard around the world as we hear from Q-News Graham Kemp, VK4BB:

--
The presence of Indonesian non amateur groups on the various amateur band frequencies in the 40 and 20 meter bands is causing severe concern for all the amateurs of Region 3 and the world over. While they use amateur radio frequencies for their regular communications, you will never miss the many calls for Prayers and the many jokes and Kookaburra pattern of laughing with old men and young ladies together.

The 40 meter band has several channels of 5 kHz intervals from the lower edge and these stations have their breeding grounds here. They graduate to other frequencies and move to 20 meter band, where they are on either side of the International Beacon frequency of 14100 kHz. Many of us in Region 3, cannot monitor any NCDXF/IARU beacons on this frequency.

Even though this QRM from Indonesians has been reported month after month to telecommunications authorities, so far nothing seems to be happening get them off the air.
--

If you hear this QRM, please report it to your nations Intruder Watch coordinator.
(Q-News)

**

RADIO LAW: COURT RULES CITY CANNOT RESTRICT BUSINESS ANTENNA USE

A California Court of Appeals has ruled that a city cannot regulate the type of transmissions that an FCC license holder can broadcast. It also says that a

city ordinance that prohibited a license holder from broadcasting commercially is preempted by federal law. Amateur Radio Newsline’s Bruce Tennant, K6PZW, says what the city of Rancho Palos Verdes was trying to write its own rules on this one:

--
Mark Abrams, WA6DPB, lives in Rancho Palos Verdes California. He is an amateur radio operator and with city approval, Abrams built a 40-foot antenna and 52-foot antenna in the backyard of his home. The city’s approval of the towers was contingent on their use being limited to non-commercial applications only. Abrams is also the owner of a business that sells and services two-way radio equipment and holds 76 licenses issued by the FCC which permitted the use of his antennas for commercial purposes.
--
Abrams: Audio Onlt at www.arnewsline.org.
--

Abrams says that he never used the two city-approved towers to receive or transmit on frequencies for commercial use. Instead, he used portable antennas mounted on tripods in his backyard and on a mobile tower trailer which he parked in his side yard.

But in 1998 and 1999, the City of Rancho Palos Verdes monitored radio transmissions from Abrams's property and detected the commercial use of frequencies. The City stated that these transmissions were in violation of an ordinance that required FCC licensees to obtain a conditional use permit from the city's planning commission to operate commercially.

--
Abrams: Audio only at www.arnewsline.org
--

The City of Rancho Palos Verdes and State of California filed an action seeking an injunction to bar Abrams from, among other things, operating his antennas for commercial purposes. Abrams answered the complaint and filed a cross-complaint of his own. It he claimed that federal law preempted the City's ordinance because it prohibited the use of frequencies allocated to him and his customers by the FCC.

--
Abrams: Audio only at www.arnewsline.org
--

The court says that he can use his antennas for commercial purposes without a city permit. It says that federal law preempts the City's ordinance banning such use because the Rancho Palos Verdes requirement that Abrams obtain a permit to transmit a commercial broadcast was preempted by federal regulation. It says that Abrams's FCC licenses enable him to operate commercially on certain frequencies and the City of Rancho Palos Verdes limitation on his rights are in conflict with federal law. And that’s good news for WA6DPB.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

The Court concluded the City does hold zoning authority, but such authority is limited to the placement, construction, and modification of facilities used for commercial mobile radio services only. (ARNewsline™)

RADIO RULES: UPDATE ON NTIA VS. PROPOSED 5 MHZ HAM BAND

Some good news concerning the National Telecommunications and Information Administration opposition to a new Amateur service allocation at 5 Mhz. This from ARRL President Jim Haynie, W5JBP, and General Counsel Chris Imlay, W3KD who say that they are now optimistic about reaching a resolution to issues that could otherwise block plans for the band.

The two met with representatives of the government agency to discuss the NTIA concerns. Haynie says that they came away with a feeling that the NTIA was willing to work with the ARRL to resolve concerns. Until surprise opposition surfaced the FCC appeared to have put ARRL's request for a new, domestic-only, secondary amateur allocation at 60 meters on the political fast track. (ARRL Bulletin)

**
RESCUE RADIO: HURRICANE ISADORE STRIKS

On Tuesday, September 24th, the FCC declared that a general communications emergency existed for Alabama, Florida, Louisiana, Mississippi, and Texas. This as hurricane Isadore approached the region.

The declaration requires amateurs not use 3.873 MHz during hours of darkness and 7.285 MHz during daylight. Both frequencies are to be protected plus or minus 3 kHz. Only amateurs taking part in the handling of emergency traffic are to use these 6 kilohertz slots.

The FCC said the communications emergency could last as long as 14 days but it actually remains in force until its rescinded. Keep an eye on the ARRL website newspages for ongoing updates on ham radio involvement in this emergency. Its in cyberspace at www.arl.org (From ARRL bulletin.)

HAM RADIO IN SPACE: V-U-SAT’S MESSAGES FROM ORBIT

A new ham radio satellite to be launched by India wants to carry your message. This, according to VU2NUD who is the coordinator for Amsat-India.

VU2NUD says that V-U-SAT will carry a beacon system with the ability to play back pre recorded messages on command. They will be transmitted in F-M voice

for all the world to hear and your words could be among those it broadcasts from space. Here's how:

Think of short, meaningful and apropos messages no longer than 15 seconds in duration. It could be related to ham radio space operations, amateur satellites, famous quotes, sayings or whatever. Then send it along to VU2SBJ by e- mail to sri@ebhats.com and a copy to ham@vsnl.com. Mark clearly in the subject: Message for Beacon. Then wait to see what V-U-SAT eventually has to say. (ANS)

**

ENFORCEMENT: FCC SETS ASIDE LICENSE RENEWAL

The FCC has notified Scott E. Kamm, of Sioux City Iowa that it has set aside the renewal of his Technician class license grant for N0UGN. The Commission said it took the action based on recent complaints about the operation of Kamm's station and questions regarding his qualifications to be a licensee.

The FCC notes a Warning Notice by the Enforcement Bureau sent to Kamm last February 5th. The agency says that the warning was related to Kamm's alleged use of transmitting equipment on 156.300 and 174.000 MHz without a license, and deliberate interference to an Amateur repeater operating on 146.910 MHz. The letter also pointed out that Kamm's address in the database was incorrect. And subsequent to that warning notice the FCC says that information came to its attention that Kamm had apparently provided radio equipment to an unlicensed minor residing in Waterbury, Nebraska, and had instructed him on how to operate on the Marine Band and other frequencies.

In his February 11th response to the FCC Warning Notice, Kamm denied setting up radio equipment for the minor, and also stated that he had sold all of his radio equipment. But the FCC says that it has all of these complaints under review and that Kamm will be hearing from the agency again in the not to distant future. (FCC)

SAFETY ALERT: FLUKE METER RECALL

Test equipment manufacturer Fluke Corporation has announced a voluntary recall of certain models of its digital multimeters. This because of a delay in readings on the A-C scale above 500 volts.

According to a company release, the meters can take more than 18 seconds to reach a final reading. This could lead users to think that the voltage is lower than it actually is.

The meters involved in the recall are models 175, 177 and 179 of which 17000 were sold in the United States. All of the recalled units have a serial number below 79000000 and were sold between January and October 2001. If you have one, please call Fluke toll-free at 800-260-4819 between 8 AM and 7 PM weekdays Eastern time. More information on the recall can be found in cyberspace at www.fluke.com/rma/default.asp. (Fluke press release forwarded by WA6ILQ)

**

SAFETY ALERT: KODAK DC5000 DIGI CAMERA RECALL

A recall on a popular digital camera. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the shocking details:

--
If you own a Kodak brand digital camera model D C 5000, listen up. Eastman Kodak Co. is recalling about 75,000 of these cameras because of a possible manufacturing defect that can cause electrical shock.

According to news reports, the recalled cameras bear the model number DC5000 on the lower front right-hand corner. The cameras also carry a plate on the bottom containing the Kodak product identifier code KJCAA, followed by an eight-digit serial number ranging from 01800001 to 11700825.

The cameras were sold at department, electronic, computer and camera stores as well as mail-order and Web sites from June 2000 through August 2002. Consumers can return the cameras for free inspection and repair by contacting the company at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time.
--

Again, if you own one of these cameras, please contact Kodak at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time. (Kodak press release)

RADIO HISTORY: PEARL HARBOR REPORTER S.K.

He wasn't a ham, but Hugh Lytle was a communicator in his own right. History remembers Lytle as the man whose teletype message provided The Associated Press and the world with the first account of Japan's sneak attack on Pearl Harbor back in 1941.

Lytle was the news services Honolulu correspondent and a reserve Army officer. He was awakened by the Army on December 7th as Japanese planes bombed the U.S. fleet. According to his son David, Lytle quickly left for his A-P office at the Honolulu Star-Bulletin, where he filed a brief account of the attack in progress. He then reported for military duty with the Army.

A few weeks ago on August 16th Hugh Lytle passed away. He was 100 years old. (Published reports)

HAM TRAVEL: FREE ACCOMMODATIONS FOR HAMS ON THE GO

From across the Atlantic comes word of an interesting program for hams who like to move around. The International Travel Host Exchange, or I-T-H-E is a program administered by the German national society, D.A.R.C. It provides radio amateurs with the possibility of free accommodation with other amateurs around the world in exchange for other hams offering accommodation to overseas amateurs.

Most International Travel Host Exchange members are in Europe, but there are also amateurs registered in Australia, Canada, India, Indonesia, Japan, Malaysia, New Zealand, Syria, Thailand and the USA. Once registered, postal or e-mail addresses are made available so that contact can be established well before any visit takes place. For more information please contact Thilo Kootz, DL9KCE by e-mail to dl9kce@darc.de.

**

SCIENCE AND TECHNOLOGY: NEW GRAYLINE STUDY REMAILER

A new Internet newsgroup has been set up to discuss and coordinate the current research into greyline propagation by the RSGB Propagation Studies Committee. It is with Yahoo and people can subscribe by sending an empty e-mail to greyline-subscribe@yahoogroups.co.uk

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. ARNewsline is one word spelled a-r-n-e-w-s-l-i-n-e.

HAM RADIO IN SPACE: RS-12/13 - S.K.

The AMSAT News Service and the ARRL Letter both report that the Russian Radiosport RS-12/13 ham satellite appears to have died. Jerry Brown, K5OE, reports he's received word from Russian sources that RS-12/13 went dark as a result of severe solar flare activity in
July and August.

At airtime, efforts are under way to restore the satellite, but hopes for success are dim, according to Brown's Russian acquaintances. RS-12/13 were integrated into the COSMOS 2123 Russian navigation satellite, launched February 5, 1991. It’s beacons have not been heard since August 20. (ANS, ARRL Letter)

**

INTERNATIONAL - AUSTRALIA: CB RULES ARE CHANGING

The Australian UHF CB equipment standard is to change. The new standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. The A-C-A has also informed the Australian Association of Citizens Band Radio Operators that once the standards are approved by Standards Australia, they will become compulsory for equipment manufacturers. (Q-News)

And BI7DX is an Isands on the Air expedition that will operate from Weizhou Island throuhgh the 4th of October. Weizhou Island is located in the Gulf of Tongking in South China with team members comming from four different Chinese provences. The operation will be on SSB and CW from 40 to 10 meters, including the WARC bands. (RSGB)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, our favorite flying T-Hunt is about to start. This, as the famed radio tagged burrowing owls take flight once again. With the details, here’s Joe Moell, K0OV.

--
It's that time again -- migratory birds in the Northern Hemisphere are heading south for the winter. For the fifth year, ham radio operators and scanner fans are being asked to use their equipment to help wildlife biologists figure out the routes and final destinations of endangered Burrowing Owls. In previous

years, hams helped determine that owls hatching during summer months in the Canadian provinces of Saskatchewan and Alberta travel over central states from North Dakota to Oklahoma, ending up in southeast Texas and northern states of Mexico. They sometimes fly over 2000 miles to their winter homes.

There aren't any radio-tagged Canadian owls to listen for this fall, but the University of Arizona is asking for ham help with 53 transmittered owls from eastern Washington state. If you live in the western USA and can receive 150 MHz signals, you could help. Your scanner or extended-range hand-held ham radio transceiver, plus an outside antenna, are all you need to join in. If you have radio direction finding equipment for VHF, so much the better.

For all the frequencies and monitoring information, go to the usual place on the Web, www.homingin.com (HomingIn is one word.) If you aren't on the Web, send postal mail to my callbook address. Again, the Web site is homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

Once again, more information is in cyberspace at www.homingin.com. (ARNewsline™)

>Two-and-a-half years into Restructuring, and we've gained only 8.5 kilohams?

Yup. In fact, it's worse than that: The number of US hams peaked around February 2001, and has wandered around the present number since then.

>Where are all the eager young computer-literate electronic wizards we were
>promised?

On the internet, or looking for jobs since the dot-com bubble burst. Your career choice turned out to be a lot more secure.

> We should have seen our numbers almost double by now, in
>the absence of high-speed code testing!

The USA has never had "high-speed" code testing for a ham license. And since 1990, anyone with a documentable learning problem could get a medical waiver.

>This "growth" is barely what we've
>seen during the same period in the Pre-Restructuring Era!

Bingo. Which indicates that the code testing is not the problem some folks claim it is.

In about a year we will see Element 1 dropped, unless a miracle happens. Then we'll see how much effect it really has.

>I'd dearly love
>to know the average age of those 39K new Techs we gained in the last
>2.5 years!

We did not get 39,000 new Techs. FCC has been renewing all existing Tech Pluses as Techs since April 15, 2000. That's one of the reasons Tech is growing so fast and Tech Plus is shrinking so fast. If the rules are left alone, by April of 2010 there will be no Tech Pluses at all. A SWAG says that at least a third of those 39,000 are Tech Pluses renewed as Techs.

Also, a Novice who passes the Tech written gets a Tech, even though HF privs are retained.

> Is there any known source of such demographic data regarding
>the ARS?

Not a reliable source. FCC has been on and off with requiring birthdate data. Hamfests and club meetings are not representative samplings.

Aw shucks, I think most folks already know that. Perhaps they just think it's easier to wait it out? You know what's funny? An old neighborhood friend of mine is a Tech and is going to "wait it out." Well, a while back I'd mentioned that my XYL wanted her ticket and he advised to grab a Tech so we could chat on 2m. I explained that her interest was sparked by hearing S.A. come in on my CB rig. "Too bad, she'll have to wait for the code requirement to get droppedfor a DX band." said my friend. Well, after sending a few code characters for the examiner in Guayaquil, Ecuador' she get's a HC2 Novice call. The funny part's that because we (USA) have a reciprocal agreement with Ecuador, my XYL gets to ply her hobby on the 10m Novice sub-band as HC2xx/W2 @ 200 watts (Until she gets her US citizenship, of course.) while my friend still waits for the code requirement to "go away." Moral of the story...all because she "tried." (Don't think she didn't hesitate, but the examiner told her to "give it a shot.")

155.3
> >>kM) legal?

No more so than the repeal of prohibition.

> Are you saying there is no association between cb and freeband? I
disagree!

There's NO association between the attempt by CBers to legally change the rules r. the CB and the "freeband." (Or the use of amplifiers, for that matter.)

> >Nothing could
> >be further from the truth. RM-9807 was a noble effort to legally remove
the
> >155.3 mi. limit rather than simply ignore the rule.
>
> But what would be the effects of removing that rule?

Folks could legally respond to any signal that their legal setup is capable of receiveing. Again, just to reiterate, we ARE talking about 12 watts P.E.P. on a 440 KHz sliver of the HF spectrum. (Sans VFO to boot.) Most SSB ops. take part on channels 36 through 40. Entirely underwhelming, Jim. I, for one, find it pretty hard to feel threatened as an ARO. AROs that are also CBers could also demonstrate good operating technique to newbies using type-certified gear. Is it easy to get an AR license? Sure, but it's not for everybody...particularly, right out of the gate. Neither you nor I can speak for everybody.

> I would. The rule is there for a good reason.

That reason may go away next year. I see no other good reasons.

> > That doesn't
> >mean I condone ignoring the rules in place though. Any person(s) who find

rules.
> But that right includes the rights of other citizens to disagree with the
> proposed change.

Fair enough. UNLESS, it's a private interest group that is unconcerned (By charter, in the case of the ARRL.) with the area and/or constituency directly affected by said rule/law.

effect

> on cb or freeband.

All very good (or NOT) and true, but...this has nothing to do with RM-9807. You already know my position re. illegal amps, out-of-band ops., and 10m intrusions...I hate 'em and I'll drop a dime (Ok, quarter.) in a second, but I won't paint 'em ALL with the same brush.

> >> It has to do with the basis and purpose of various services.

The "basis and purpose" thing is all fine, but that's changed. Plain and simple.

> >Like it or not,
> >this is what the citizen's band has evolved into...and quite frankly, let's
> >not forget who the band's was named for.
>
> The mere fact that something has evolved a certain way does not make it right
> or justify rules changes that would further that evolution.

In this case, I believe it does. It's just a difference in opinion.

> >It was placed in a portion of the RF
> >spectrum that supports worldwide propagation, bad move to begin with.
>
> So we should compound one mistake with another?

I don't believe we'd be "compounding" the mistake. Quite the oposite, I believe we have an opportunity to create a win-win situation. It'd involve increased enforcement and perhaps decreasing the ill-will (real and/or perceived) between AR and CB operators. We might even gain some sorely needed "self-policing" wrt enforcement on the CB.

> > If the
> >"citizens" wish to redefine it, let them <do so> without interference.
>
> Are not the views of ALL citizens to be heard on the issue?

Sure, but how p/o'd would you be if a CBer in your town lobbied and won to get ALL antennas restricted to a height of 60 ft.? Don't think it could happen? Much stranger things have gone "on the books," especially in smaller incorporated towns and villages. PRB-1 has not been the defeat-all club we'd hoped it would be and even then, it'd cost some dough to get it done. (Just like it will when the next petition to drop the 155.3 mi. limit is submitted.)

> And what "mess'" do amateurs have, compared to cb? Is it not true that many of
> ham radio's problems are the result of attitudes and problems imported from
> other services? (I can give you lots of examples of this).

I'm all ears.

> In other words, the views of hams should not be aired, even though the
rules
> change could hurt ham radio.

"Hurt" ham radio?! Like I said, allowing some folks to respond to whatever signals that may be captured by their antenna with a thouroughly underwhelming 12 watts on what realistically amounts to 5 discrete frequencies (channels) just doesn't make me feel threatened (much less hurt) in any way, shape, or form. It feels petty. (Not directed at you, Jim.) Now if RM-9807 petitioned for an increase in power, spectrum, VFOs, modes, (RTTY, PSK-31, FM, etc.) THEN I might see the "paralleling" argument...but just lifting the "artificial" (Good choice of words, Jim.) distance limit with no increase in power or frequencies...please.

it.

Agreed. My little girl's in Kindergarten and has five CW characters down pat. (She thinks it's a game.) But everybody's tastes are not the same. Why try and force them into one mold. Like radio=take Tech exam? How about like radio? Here are your options. FRS, MURS, GMRS, CB, Three levels of AR, commecial broadcasting, etc. One can start at just about any one of these based on their own personal interest...but the best part is that they can move from one to another as their interest level increases and/or changes.

> >Re. CB, I have a niece who was interested in radio
> >after viewing my shack, but not enough to be "bothered with the license
> >thingy."
>
> Even the Tech written?

"License thingy" means license thingy, Jim. If I'd pulled the horse (Sorry for the analogy, kiddo.) to water, what guarantees that she'll want to drink. I let her come along at her own pace and now she's interested in Morse code. (I can't take full responsibility for that...Leonardo Di Caprio and the Movie Titanic had a part in making CW appear "way cool!" Go figure?!)

bands?

Just listen, Jim. Just Listen. If you reread the paragragh above, I stated that she violated no rules. That's the point. Yes, the same thing could certainly have been accomplished with a HF receiver, but why must that method apply to EVERYBODY? Plus, I had the spare rig lying around to give to her. (Threw together a quikie dipole for her too.)

"Basic reality" can really suck when we don't agree with its idealogy, can't it? Best we can do is try to make the best of it. I think it's best to agree to disagree re. the 155.3 mi. limit on the CB. I've my opinions (Shared by others.) and you've yours. (Likewise, shared by others.) I'd like to keep the mutual respect factor intact. :-)

I haven't been able to do any real expedition chasing for years and
years, don't know JA3CZY. But I sure know Martti, whew . . I was in
the piles when he put ZA on the bands . . whatta coup . .

Miller might be more at home on the water. In that case maybe he
oughta team up with the original pair of dx expeditioneers, Gus
Browning W4BPD and Danny Weil/VPSVR/Yasme, the fathers of the whole
game.

Then
> we'll see how much effect it really has.

I don't expect any significant change in TOTAL numbers. What we
will see is many techs going for General with some going on to
Extra. Most folks either will "cut it" today as an entry process
via Tech or they won't bother at all.

One key factor that many people don't consider is
that the population of the USA is pretty static. In the pre-70s,
we had a natural liklihood of growing simply because the
universe of possibly interested people was always
growing. Not so anymore.

I think the distance limit for CB is ridiculous, but perhaps it's an attempt (albeit not a very good one) to correct for the twin mistakes of putting them on HF and giving them SSB. It's too late for anyone to put the genie back in the bottle, I think. I once bought a CB rig, after I was already a ham, and used it exactly once. Couldn't stand it, but each to his or her own.

s25.5 is hopefully doomed. The big mistake that amateurs made in 1927 was to agree to have CW testing enshrined as an international requirement as a quid pro quo for getting ham radio recognised by the ITU (or rather it's predecessor) as a 'service'. Many other countries had no code testing before that (yes, I do know that the US did). The other side of the story is that frequency allocations on HF were much less uniform before that, but the price paid was too dear. Nothing else has ever caused more trouble and dissension in ham radio. I will rejoice when it goes.

Not true at all. Incentive licensing was and IS the reason for the problems
in amateur radio.

The distance requirement is there because cb is technically a "land mobile
service". and is defined as short-range.

>It's too late for anyone to put the genie back in the bottle, I think.

Maybe not. As other communication and radio services develop, 27 MHz cb may
decline. Are there as many active cb users today as during the boom years of
the '70s?

>I once bought a CB rig, after I was
>already a ham, and used it exactly once. Couldn't stand it, but each to

I have listened occasionally for many years. Not something I want to be
associated with.
>
>s25.5 is hopefully doomed.

Seems pretty clear that support to keep it at WRC-2003 is almost nonexistent. I
don't see how the necessary support will arise in the 9 months or so till the
conference.

>The big mistake that amateurs made in 1927 was
>to agree to have CW testing enshrined as an international requirement as a
>quid pro quo for getting ham radio recognised by the ITU (or rather it's
>predecessor) as a 'service'.

WHOA!

Consider what HF radio was like in 1927. Practically all radio services used
code as a primary mode. A code test requirement was perfectly reasonable then,
simply for interference and interoperability reasons. Whether that requirement
is reasonable today is a different question.

Had amateur radio NOT been granted "service" status in 1927, it would probably
have died out before WW2.

>Many other countries had no code testing
>before that (yes, I do know that the US did).

Many countries wanted amateur radio to die out in 1927.

>The other side of the story
>is that frequency allocations on HF were much less uniform before that,
>but the price paid was too dear.

The alternative was oblivion for the ARS.

> Nothing else has ever caused more trouble
>and dissension in ham radio.

Hardly. There were bigger flaps when:

- SSB displaced AM on HF
- FM displaced AM on VHF/UHF
- Generals got all privs in 1953

and the real biggie:

- "incentive licensing" was reintroduced in 1968.

The code test issue seems like a biggie because we have the 'net to spread the
noise around.

1637. Another Incredibly Bad Idea - ARRL Diamond Club

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-05 00:34:52 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <3D9E339D.CD92F755@earthlink.net>
Source record: 53403

The latest really bad idea from the ARRL is the "you can always get more if you pay more" stratification plan outlined by new ham K1MMH, ARRL Chief Development Officer (another incredibly bad idea). This latest scheme follows on the heels of the deletion of contest line scores and Section News from QST.

I note that the big spenders will get their QST via first class mail. I wonder if there is a level which will provide the plastic mailing sleeves formerly enjoyed by all at no additional cost.

It is evident that the board of directors are operating on much different frequencies than the mainstream.

"==>ARRL ANNOUNCES DIAMOND CLUB DONOR RECOGNITION PROGRAM

The ARRL has introduced The Diamond Club as a way to increase member involvement, support the League and offer valuable membership benefits above and beyond those already available. The program was approved by the
ARRL Board of Directors at its July meeting and introduced this month.

"This is a donor recognition program, to acknowledge member loyalty," said
ARRL Chief Development Officer Mary Hobart, K1MMH. "We're excited to be able to thank our members in ways we've never been able to do previously and, at the same time, to raise critical additional resources to sustain ARRL in the future."

Hobart said the program has a first-year goal of $150,000 "to support those ARRL-sponsored programs amateurs enjoy." She compared the program to
those already offered by other non-profit organizations across the US.

"We did a membership sample survey in 2001 to gauge interest in specific benefits and types of benefits," Hobart explained. "The Diamond Club program was crafted to be consistent with the results of that survey."

Recognition for increased annual support in The Diamond Club includes all
current ARRL membership benefits plus pins and certificates at every membership level plus special Diamond Club car window decals, publication
discounts, new QST delivery options and donor recognition opportunities. "You select the contribution level that fits your budget, and ARRL will do
the rest," Hobart said.

Members of The Diamond Club can start out small--with an annual contribution as little as $75 a year ($50 a year for ARRL Life Members)--or large, with a yearly gift of $5000 or more. In addition to a
subscription to QST, access to members-only pages on the ARRL Web site, and other member benefits, Diamond Club donors at the introductory level will receive a Diamond Club pin, a personalized Diamond Club certificate and two Diamond Club vehicle window decals.

The Diamond Club offers additional benefits for larger contributions at the Brass, Silver, Gold, Platinum and Director levels. For instance, at the Platinum level--available for contributions of from $2500 to $4999 annually--members also will receive 10 percent off direct ARRL publications purchases, first-class delivery of QST, unlimited free use of
DXCC, Outgoing QSL Service and awards, an invitation to all ARRL donor recognition events and an annual voluntary listing in the ARRL Annual Report and on the ARRL Web site.

Donations to the ARRL Diamond Club are tax-deductible to the extent allowed by law and are not refundable. Hobart emphasized that The Diamond
Club contributions are annual. Details on The Diamond Club are spelled out
on the ARRL Web site <https://www.arrl.org/diamondclub/>"

>hesitate, but the examiner told her to "give it a shot.")

Exactly! Great story - proves the point.

It must be remembered, too, that there is not much reason for anyone to upgrade beyond Tech if they are not HF-oriented. And a LOT of hams aren't. For example:

- some hams are only or mostly interested in local/regional radio, and communicating with people they might actually meet in person and do stuff with. One-time chats with folks they will never encounter again leave them cold. Or they may be interested in public service from a local/regional point of view, rather than national or even state-wide.

- some hams don't have the space for HF/MF antennas, or don't want all the fuss of seting up an HF station

- some hams don't like the characteristics of HF/MF radio (noise, static, poor fidelity of SSB, unreliable propagation/coverage, QRM, narrow bands, etc.)

- there are so many things to do on amateur VHF/UHF that some hams are perfectly satisfied to do all their hamming above 50 MHz.

And they will ALL run just 12 watts PEP, right? Nobody will be tempted to run
more power when their 12 watts PEP is not answered by a signal they can hear?

>Entirely underwhelming, Jim. I,
>for one, find it pretty hard to feel threatened as an ARO.

Many of the problems in ham radio are imports from cb and freeband. The biggest
one is a lack of respect for the rules. I've seen many, many examples of
cbers-turned-hams who brought with them an attitude of 'FCC-be-damned'.

Example: Several years ago, three new hams showed up on one of the local
repeaters. They were welcomed, and joined the repeater club. But it soon became
apparent that they had little respect for FCC rules, club rules or plain good
taste. They'd tie up the repeater for hours, ignoring requests for "call
please" or "autopatch please" or even "net is about to start". Their language
was full of swear words, and they often told jokes of an ethnic or sexist
nature. Control ops were frequently shutting down the repeater due to thier

behavior.

They were repeatedly approached on and off the air about their antics, but to no avail. Stock answer was "We don't care what you or the FCC say - we did that stuff on 11 meters and we're going to do it on any repeater we want to".

Meanwhile, a family of scanner enthusiasts had approached our club about becoming hams. Father, mother and four kids ranging from elementary through high school. Some interest in their extended family, too. They were quite interested at first - until they heard those three guys. They wanted a family activity, and those guys convinced them ham radio wasn't family-rated. And they told all their friends about it, too. At least six good potential hams lost - probably a lot more.

The situation was finally resolved by simply shutting the repeater down whenever one of the three showed up. So they went and plagued another repeater. I don't know if they are still active. And this isn't a rare or isolated case.

> AROs that are
>also CBers could also demonstrate good operating technique to newbies using

>
>All very good (or NOT) and true, but...this has nothing to do with RM-9807.

Yes, it does. It shows that the actions of cbers have resulted situations that
are damaging to the ARS. Opening up cb to legal DX would have similar effects.

>You already know my position re. illegal amps, out-of-band ops., and 10m
>intrusions...I hate 'em and I'll drop a dime (Ok, quarter.) in a second, but

>
>Sure, but how p/o'd would you be if a CBer in your town lobbied and won to
>get ALL antennas restricted to a height of 60 ft.?

I would oppose it. But all citzens, radio users or not, have the right to
petition for such rules - and be judged on their merits.

Besides, my antenna is only 35 feet up, and I work the world.

>Don't think it could
>happen? Much stranger things have gone "on the books," especially in smaller
>incorporated towns and villages.

In many cases, they were the result of non-radio folks opposing things like
cell towers. Also consider the TVI potential of the cb or freeband user running
a dirty amplifier and a big antenna.

>PRB-1 has not been the defeat-all club we'd

>(RTTY, PSK-31, FM, etc.) THEN I might see the "paralleling" argument...but
>just lifting the "artificial" (Good choice of words, Jim.) distance limit
>with no increase in power or frequencies...please.

The 12 watt PEP power limitation is as "artificial" as the 155.3 mile distance limitation - why not allow at least 100 watts PEP? The restriction to AM voice modes is also artificial - many other countries use FM, so why not allow FM, too?
And since the SSB channels don't use the carrier, why not allow PSK-31 there on a secondary basis? Not allowing data modes is "artificial", too. All of the same arguments against a distance limit apply to those rules.

Why is it a bad idea?
That kind of option is made by hundreds of clubs.

You support more, you get more. It's the American way.

> I think the distance limit for CB is ridiculous, but perhaps it's an
> attempt (albeit not a very good one) to correct for the twin mistakes of
> putting them on HF and giving them SSB.

I'm not so sure, Alun. VHF/UHF was not as easy a "consumer" item back then as it is today, so they took the easy way out rather than put it on VHF and let the manufacturers endure the growing pains. One well known ARO on the r.r.a.p. once called it "summer intern thinking," but it was actually pretty good business acumen. It was much less of a financial hassle to preside over smaller, more easily manageable "HF" rigs. Then the "taste, but don't swallow" ideology was applied to designate the CB as a land-mobile service to ostensibly appease the ITU requirements. Like most things in life, a little more investment "up front" might've saved them much more in the long run. Fact; the CB IS a HF band and lends itself very well to worldwide comms. via skywave propagation. It is what it is. It has become a defacto hobby for some (not all) folks who really do remain at legal power limits and frequency allocations. Unfortunately, the actions of many lids on the CB have brought scorn on the majority of operators there. Such is life.

> It's too late for anyone to put
> the genie back in the bottle, I think.

I'd have to agree. The internet has fueled the phenomenal growth of 11-meter hobby radio. A quick internet search on '11-meter radio' will quickly bear this out. I'm not saying it's right...it just IS. Good luck trying to "deallocate" that!

> I once bought a CB rig, after I was
> already a ham, and used it exactly once. Couldn't stand it, but each to
> his or her own.

Fair enough statement. While I'm sure that all the awful stuff discussed occurs on the CB, the plain and simple truth is that the CB has always been very good to me. Call it dumb luck or what have you, but I've not encountered the hordes of lids oft attributed to 11-meter ops., go figure?! CB radio is what sparked my interest in AR. If I completely turn my back on it, I'd be a hypocrite. Besides, if I abandon the CB, then the "haters" win. I'd rather occassionally bring the good operating manners and/or techniques

learned on the AR band back to the CB and set a good example. That's my contribution to the CB. Most here know me to be a pretty ok newcomer to AR, my association with the CB certainly shouldn't diminish that.

> s25.5 is hopefully doomed. The big mistake that amateurs made in 1927 was

> is that frequency allocations on HF were much less uniform before that,
> but the price paid was too dear. Nothing else has ever caused more trouble
> and dissension in ham radio. I will rejoice when it goes.

I certainly won't. I'm one of those who've written the FCC imploring them to retain the code requirement. I think it's a very important part of AR's tradition. There already exists a no-code ticket, so the "exclusion" argument is pretty much moot. I won't even go near the "barrier" thing anymore...my side hurts from laughing so hard when I hear how the 5-wpm test's a "barrier."

> and other member benefits.....

So now what? Will they start restricting us lowly annual members from the members-only pages, etc., sort of like when they started up another magazine (QEX) for everyone to subscribe to if they wanted any serious level of technical content?

Definitions can be changed with the times. After all, perhaps the "citizens"
will define the "Citizen's" Band in the future. If 11-meter enthisiasts
could only realize the tremendous potential political and economic clout
they could wield. I doubt that;ll ever happen though. Cbers have a dismal
track record wrt "pulling on the same side of the rope."

> >It's too late for anyone to put the genie back in the bottle, I think.

Overall no, but the number of 11-meter "hobbyists" has increased
dramatically. Just use that search engine, Jim.

Sorry to hear. Like I said in an earlier post, the CB has always been kind
to me. Dumb luck perhaps? I'll stay "associated" and try to set a good
example for others.

Aw, come on Hans, she's doing exactly what they hired her to do -
extract as much from us as can be done. Who else would they get it from?

Bert:

Same here. Personally, I think that if we had something equivalent to FRS and MURS 20 years ago, perhaps with more power, choice of antennas, use of repeaters, etc., there would have been less, or zero, pressure to reduce or eliminate code testing, since we'd then have a more practical, useful, short-to-medium range personal comm service. The fact that these options exist today could explain the lack of growth we're seeing in the Post-Restructuring era, with a max. 5 WPM code test requirement.

Interestingly enough, there are virtually no "young people" (minimum age for a CDL is 21) in my line of work -- at least in my neck of the woods. We're all mostly retired military or retreads from other careers, from former teachers, cops, and other assorted public servants to farmers, salesmen, and several ministers. I consider myself lucky to have found this job. It's enjoyable work, offers a daily challenge not found in fixed-route bus driving, pays well, and offers all the overtime you can handle. Now, if only I could stop backing into things...

BTW -- on October 14, I get my right hand operated on for Carpal Tunnel Syndrome. I'll be off work on disability for up to 8 weeks, but probably unable to post to the newsgroup for a couple of weeks. After I get my stitches out, I'll be taking a trip home to NY for at least a week and then visiting Comrade Natasha in Indianapolis where she's now working as a TSA security screener. So, if I drop off the radar screen for a while, don't send out a search party.

I think the bottom line here is that the promise of essential growth in the ARS with the significant (60%) reduction in the maximum code speed for Extra class licensure has been a typical liberal lie. One thing I have noticed is that there doesn't seem to be much, if any, reduction in CW activity on-the-air. In fact, the mode seems to be as popular as ever. Unfortunately, this could very quickly change for the worse, in the absence of CW-users generated by the requirement for higher-speed code testing. In any event, we've tossed the dice, and it seems to have come up craps. Look for big chunks of UHF spectrum to be pulled out from under us.

I disagree, Hans. The "diamond club" idea is even dumber. Do big contributors get to sleep in HPM's bedroom?

>Everyone who is

Or third class, or fourth class, etc.

They'd be a LOT better off to offer the various bennys a-la-carte. Example: Want first-class postage on QST? Just send in an extra $X.

I feel that the ARRL generally does a good job for Amateur Radio. The ARRL at least encourages the full range of activities. Also, the radio publications are very good.

They had to come up with ways to manage their expenses and so they cut contest scores and came up with the "Diamond club".

I agree that the Diamond club is a bad idea. First class postage and some recognition plaque is not much for paying increased fees. You do not have to "upgrade" if you do not feel its worth it. My opinion is that most will not.

>So what is the advantage of getting QST via first class mail? It
>is just as lousy a rag via first class as it is via regular mail.
>

I do not care about contest scores, so I feel cutting the contest scores is better for me. Also, I could care less if it came via first class mail or if it is a few days late. And yes, QST is a pretty lousy magazine. Its filled with junk such as contest scores, product ratings, "Ham" radio stories, cute jokes about how people saw the word "Ham" on some sign, etc. It is not "Ham Radio" magazine, a good magazine.

QST reflects what Ham Radio has degraded to. It is clearly appliance oriented. Its also about the Ham Radio culture. I guess thats what Ham Radio is today.

If any of you computer wizz kids actualy knew anything you would note that anyone that is infected by this bugbear will send out anything it decides to.

Yes I had the virus 3 days ago. It is long gone and I do have a working anti-virus program.

If you smart ones would simply insert at the beginning of your address book listing something that when it bounces back you would know you had a virus sneak in then you too could stop it.

Such as 123@thisisavirus.com should do the trick.

Then it wouldn't spread all over hells half acre because of jerks that don't know better.

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

----------EXCERPTED FROM URL SHOWN ABOVE----------

Diamond Club -- Director Level ($5,000 - $9,999 donation annually)
Available to Life Members Only

Benefits:
Diamond Club -- Director pin
Personalized and framed Diamond Club -Director Certificate
Diamond Club car decal (2)
10% publication discount on purchases direct from ARRL
Overnight Delivery of QST
Unlimited free use of DXCC, QSL Service and Awards
Invitation to ARRL Annual Donor Recognition Events
Voluntary annual listing in ARRL Annual Report and on ARRL website
Bound sets of ARRL periodicals -- QST, QEX and NCJ

After attending a recent Hamfest, one can conclude:

Percentage of male Hams: 95%
Percentage of old Hams: 50%
Percentage of obese Hams: 25%

These are high percentages.

Hams generally are a pathetic group as a whole- obcessed, cult like, people. I'm not saying all Hams are like this, there are some exceptions. However, this is the demographics of the majority of Ham Radio.

A large percentage of Hams are obese. I have been to several Hamfests and this is undeniably true. A greater percentage of Hams are obsese that other groups or than the gereral population. Why is that? Perhaps it is because Hams like to contest and other activities that use less physical activity.

If you want to gain more members, lets make Ham Radio more interesting. Lets have more activities, rather than just cult meetings. The general public is not interested in Morse code. They think of Ham Radio as a bunch of weird people. Radio direction finding, homebrewing, antenna builiding activities would build more interest. Also barbeques, sporting events, concerts, etc. to show that Hams like to have fun.

Then, the number of members will start to increase.

I did. And I don't know why you JUST got a virus allegedly from ME. I am willing to bet if you follow the 'real' route and not all that fake jibberish in the headers you will find it came from YAHOO. And I have, and never have had an account with them.

Perhaps if you engaged brain before operating mouth you would have an inkling about how this virus works.

It may not even have come from me at all. In fact it probably didn't.

I even got a virus from myself at w4nti@yahoo.com Which I never had. SEE light bulb?

Dan/W4NTI

This is just for you Lloyd.

Here are a few more comments you may want to take to heart.

>
****

> Put this entry into your e-mail program's address book.
> Display Name = *virus_trap
> E-mail address = <illegaladdressxyz
>
> Be sure to include the '*' and the '<'. This new entry should show up at
> the top of the list. If an outgoing e-mail message (as created by a virus
> or worm) happens to include this entry, then it will cause an error and
the
> message won't be sent.

==========

Can't see how the above will work. No virus would be stupid enough to
include that entry.

Or have I missed something ?

Reg.

****
Reg,
That entry in your address book will stop most
virus programs that use your address book to resend
it's self. That entry, or one simular to it, will
cause your email program to stop for an error, then
notify you that there's a problem. It's still up to
you to 'cure' the problem by running an anti-virus
program or whatever. All the entry does is prevent a
virus from sending email. You still have the virus.
'Doc

>Right on.

So let's nail the principle culprit - Windows in whatever form and design dominated by marketing.

The local (Seattle) paper's business section continues to announce new major security breaches in MS client and server software. Warnings have come twice-a-week average for some time now, and weekly for a year before that.

MS has had major problems with their Passport service revealing personal data to simple attacks. MS has also lost its third party designer base to Java or other languages run on Linux. Microsoft's .NET has failed to attract designers who perceive numerous security issues.

Chairman Bill pronounced a war on insecure design about a year ago. Skip forward that same year: low and behold they have a trade show of their PC of the future (about 5 years away) which reportedly lacks security features. The artwork shown in the paper features the glazed expression of the owner sitting about 2 foot back from a 2' X 4' display curved like a windshield (actually quite radical, about 60&#65533;). The subtle implication is that the office cubicle will soon shrink to the size of a desktop holodeck.

I once recall an incident in installing Windows 3. I had already been a part of the their beta test, so I knew my system was up to the install. Such smug hubris is inevitably cracked by Microsoft and as testimony, the installation refused to acknowledge my mouse existed. It's always the low tech problems that cripple you. Stumped by this obstacle, I called MS support and we spent an hour re-installing Windows to arrive at the same report: Mouse does not exist. The tech asked what kind of mouse I was using. I replied a Microsoft Mouse. Bingo! The tech dryly reported that Windows did not support my mouse - and he was right.

I don't remember having animal sacrifices at our last club meeting. However
as Hans said .....maybe our field day scores would go up. I belong to a
radio club for radio's sake. I do not need to be fed, entertained or take
in the latest WWE pay-for-view there. It is radio plain and simple. There

are gormet clubs for those who like to eat, sports booster clubs for those who like to follow their interests and barber shop quartet clubs for music. I have my fun via the radio and the club. May I ask what you have done for your club to make it "more fun"? You did give a truth in that hams are "wierd people" but no more than those who enjoy any other activity. The "weirdness" is only from those who are on the outside looking in.

You stated that then the numbers will start to increase.

Naw ..... the numbers won't increase for all the reasons discussed over the years on the group.

Absolutely true, and someone else pointed out the
extreme difficulty in receiving both sidebands of
a DSB-SC signal. I've seen some really nice, compact
HB SSB transceivers made with 9 MHz-filter exciter/
IF-amplifier architectures. Just a handful of xtals,
some 1N34A's and a couple of 12AT7's.

> One of the main reasons many hams homebrewed in
> the post-WW2 era was economics. Prices of

> make a big difference.....

This fact seems to be consistently overlooked
by those decrying the lack of home-brewing by
amateurs. Indeed, the mythos has become that
home-brewing was some kind of spiritual elevation
of one's being, when, in fact, it was because
post-WWII hams were such notorious cheapskates.

> Homebrewing eliminated the labor cost...

Which was considerable with chassis-and-socket
construction.

> As electronic manufacturing methods advanced,
> costs declined. Hand wiring gave way to PC boards.
> Miniaturization meant greater precision and
> planning were required. Quantity discounts
> on new parts....

That's the real reason. Moore's law, in a
somewhat modified form, applies to analog/rf
components too. You just can't get the
performance required without a substantial
amount of component integration. And that means
that any homebrew activity with contemporary
devices is going to be an exercise in system
integration, not design and development at
the transistor level.

> But homebrewing is NOT dead, despite pronouncements
> otherwise. It's simply become a niche market, rather
> than something almost all hams did, out of necessity.

I think the real problem is in the subtext of
any discussion of homebrewing. You get a clue
from the use of terms like "appliance addiction".
The implication is that homebrewing is something
that "real hams" SHOULD be doing. And perhaps
penalized for not doing it enough. That's where
I part company with homebrewing enthusiasm because,
if you really look at it, it's the CW debate all
over again. And you know what a morass one falls
into with those kind of issues.

Nope, it isn't you, Dan. It came from someone who had you in their address book. That is the bad thing about this virus. It makes it look like it is from a particular person, and can cause a lot of hard feelings.

And for allotherestaya, as long as you insist on using the "standard" email program, be prepared to constantly have to defend it against virii. That's just life, and there isn't a thing you can do about it.

Well.... you could just maybe..... change to a mail program that isn't so popular that the bad guys write for it. Heresy, I know! ;^)

I have to confess that I had this attitude back when
I was pulling down big bux at Intel pushing design
simulations through their workstations. Now that
times have slimmed out, the option of rebuilding an
old, defunct linear amplifier rather than sending
a credit-card number to HRO is much more appealing.

K7JEB:

I can remember back in 1957 that the difference made
kit assembly extremely attractive. And it was a
good practical education putting one together. I
did a couple of Heathkits (Seneca, Stereo Receiver)
and came away at least knowing what the components
looked like .

N2EY:
>>> As electronic manufacturing methods advanced,

> But making boards for one-shot projects increases
> cost and time, and decreases flexibility.

The uniformity issue is particularly apt with
high-performance analog IC's. There are only
certain component placements, relying on the
self-shielding characteristics of multi-layer
PC boards, which produce stable operation.

Also, there is the issue of component density.
That has become paramount with surface-mount
stuff. There is no way that density can be
obtained without a printed-circuit 'substrate'.

K7JEB:
>> You just can't get the
>> performance required without a substantial
>> amount of component integration.

N2EY:
> Sure you can. Look at the Heath, Drake and Collins
> tube gear of the 60s and 70s. Very low level of

True enough. But none contained a frequency
synthesizer, complex image-rejecting IF mixing

schemes, frequency memories, RF transmit
processing and other "standard" features. I
don't think those would be available at anything
like a reasonable price or size with discrete
transistors, never mind vacuum tubes.

K7JEB:
>> And that means
>> that any homebrew activity with contemporary
>> devices is going to be an exercise in system

N2EY:
> I disagree! Look at the Elecraft K2 and K1 designs.
> Yes, they're kits, but the basic radio design is
> not beyond the advanced homebrewer.

I don't have first-hand experience with either
of those units, so can't really comment. I do
think I'm safe in saying that most contemporary
RF design done with standard parts is handled
mostly at the gain-block/filter/mixer level,
not at the discrete-transistor level. I think
that is a different way of thinking about
analog signal processing than base and collector
currents and represents a first step towards
system design and away from circuit design.

N2EY:
>>> But homebrewing is NOT dead, despite pronouncements

> The ham who builds his own radio gear has knowledge
> and skill far beyond that of the "appliance operator".
> But it's just not practical to force hams to
> build.

I would be satisfied with just an understanding of
how radio works. In my latest cross-country jaunt,
I found myself explaining that, just because I have
a big, Texas Bugcatcher coil in series with the
8-foot whip on my pickup truck, I cannot auto-
matically talk all over the world. The stares
really got blank if I tried to make the point that,
contrary to expectations, the more wire on the
loading coil, the poorer the overall radiation
efficiency. Of course, these were CB-using
truckers, so some slack must be provided. Still,
if there is an essense of amateur radio, I
like to think it is the understanding of how
things work. Of course, a powerful physical
manifestation of that understanding is the
completion of a homebrew radio project. But
the understanding, such as it is, comes first.

N2EY:
> Here's one last point: Economics has yet another

> prices of used ham gear of all ages.

It has completely baffled me that the unique
character of homebrew equipment has not been
recognized. A Japanese ham will lay out $25K
for a Collins KW-1 but spurns the one-of-a-kind
AM transmitter of a similar power level put
together by an Iowa farmer back in the forties.
Maybe such artifacts need exposure and expert
appraisal on 'Antiques Roadshow' or some
similar venue. I predict, and mark my words
well, that when the rarity of homebrew ham rigs
is recognized as being greater than pre-Columbian
native American sculpture on E-Bay that the
sky will be the limit on the prices of such 'finds'.

It's not Dan's fault. The callbook server QRZ.com got hit
bypassed it's virus scanner. In the meantime it lifted a ton
of e-mail addresses from the server and now sending itself
to everyones address book

For a fix tool (free) go to www.symantec.com

Which would bring in what, $10-$15 per year? Naw, what is happening is
that nowdays one buys his Extra class status by writing a big check to
Newington.

The license no longer means much of anything.

Dick

Or you could be running Zone Alarm Firewall and not have the virus
get onto the internet at all, since Zone Alarm blocks the "programs"
access to the internet in the first place.

Yup, that's true. I'm running Zonealarm and a personal proxy server also.
Between that and my refusal to use MS software unless I have to, it
keeps things pretty clean.

Everyone should have Zonealarm.

Dick, most of the licenses no longer mean anything. Around 1978 or so, the FCC stopped with the 3rd class broadcast endorsed radiotelephone license. Later they dropped the 1st phone. Do they have a marine license anymore? I dropped all of my tickets (commercial telegraph, 1st phone, radar, amateur extra) around 1981. I decided to get it back in 1993 and simply showed up and tested out. Now it is a lifetime GROL (which simply means you paid someone for the privilege of taking an exam that might have been the equivalent of a 1960 amateur general class theory (which was the same theory then as the technician - simply 13 wpm Morse vs 5 wpm). Since no one actually wants to have to learn anything anymore, the only way to convey status is allow folks to BUY it. What could be more American? Heck, we have the best government that money can buy.

Exactly, by making it an international regulation the requirements of 1927
were frozen in place for the next 75 years.

I disagree. All of the above were much shorter term issues, and a couple
of them only apply to the US. The code testing issue has dragged on for
decades, and is a big issue in many other countries. I've been a ham for
22 years, and I can't remember when it wasn't a massive issue.

I wouldn't start collecting 40s & 50s homebrewed radio gear expecting to "cash in" on the stuff "some day". Old old homebrewed parts piles are just that despite the fact that they were somebody's dream machine a half century ago. Boating and customizing cars are ongoing hobbies from those days too and there are great heaps of examples of old homebrewed boats and cars everywhere languishing in garages and the back ends of marinas. In 99% of the cases they're worthless junk and have no market value, nada. Thus ham radio is not at all unique when it comes to the negative appreciation of homebrewed hobby "stuff". A hundred years out might be another story.

Those Japanese who are paying ridiculous prices for ancient Collins gear have parallels right here in both cars and boats. Old Chris Craft mahogany runabouts or try an original Ford Cobra or a '55 Mercedes 300SL . . Old "stuff" manufactured by known producers of high-quality hardware certainly does hold value. Does not apply to homebrewed versions in just about all venues.

Homebrewing radios in particular is all but dead for a number of valid reasons. "Back when" the only names of the game were AM & CW. Utterly simplistic designs which anybody who knew which end of a soldering iron gets hot and was able to follow a construction article could turn

into a rcvr and/or a TX. Was there, done it, 1947 +/-.

Roll forward to a few months ago when I bought an FT-1500M 2m FM mobile rig. 50 watts of clean RF out of a package the size of a couple packs of smokes, some ungodly number of memories, vfo mode or does programmable splits, scans, PL tones, 9600bps data handling, is easily programmed with any Winbox or it's own panel buttons, etc,. All for a lousy $129.95 over the counter retail. THAT's what happened to ham homebrewing. And in all but some rare instances good riddance.

Oh, goodness, Hans. We don't want to open up *that* can of worms, do we?!
:) Your comment emphasizes my point--at least I think it does. Someone's
"meaning" of a God (or none), what or who Jesus is/was, and the what the
Bible represents, is (more likely than not) entirely different from someone
else's. Especially, as you mention above, if that "meaning" is derived from
participation in or agreement with an organized faith/religion/cult.

Dummy Dan better look before he preaches. Bugbear is a mass-mailing worm
that, once it infects a target system, can log keystrokes, enable a backdoor
trojan, and stop antivirus and firewall programs. It replicates itself by
sending out e-mail to addresses harvested from infected systems using
subject lines such as the following:

Clearly, with bugbear forging the From line of the email by combining two other addresses, Dan's notion of a bogus address book entry probably won't cause any bounces to your own mailbox at all. They will bounce to the the invalid address instead, and you'll never know the forged email went out. Bugbear uses its own email engine in an attempt to avoid detection by the owner of the machine, so looking at your log files won't work either.
The worm opens a port on the victim machine - port 36794 TCP and searches for
various running processes, stopping them if found. The list of processes includes
many popular AV and personal firewall products.

This remote access server allows an attacker to upload, and download files, run executes, and terminate processes.

It drops a DLL on the victim machine - keylogger related.
This DLL is detected as PWS-Hooker.dll
The worm copies itself to the Startup folder on the victim machine as
***.EXE
(where * represents random character), for example:

Win98 : C:\WINDOWS\Start Menu\Programs\Startup\CUK.EXE
2k Pro : C:\Documents and Settings\(username)\Start Menu\Programs\Startup\CYC.EXE

I included the above for you "blocks of concrete" such as blockhead Dan who just cain't take
no more criticism.
Hey Dan. Better run outside. I think Dimmy just tipped your Porta-Potty over and y'all know what that
does to the grass!!!!!

Yeah, I have to keep reminding myself that this is the same culture that performs tea ceremonies with 200-year-old, lovingly restored bowls that were originally designed to be thrown away after being chipped or broken during everyday use.

W3RV:
> I wouldn't start collecting 40s & 50s homebrewed

Awwww, man! Does this mean that highband, Progress Line radio I've been holding onto all these years may really be only good for holding down the rear end of somebody's car? Major disappointment here.

W3RV:
> Thus ham radio is not at all unique when it comes
> to the negative appreciation of homebrewed hobby
> "stuff". A hundred years out might be another story.

Very true - about the time the Smithsonian becomes interested in it as "folk art".

I think the disquiet I and others feel about the demise of homebrewing in amateur radio is actually a reflection of the disquiet we feel about whole generations of electronic technology being plowed into landfills. I have lived and worked long enough building that technology to know what it represents in human terms of giving meaning to life. Seeing it callously discarded is like seeing one's self callously discarded.

HOW can DXCC be "free" if you have to join into an exclusive club within a fraternal org that requests a donation of " ($5,000 - $9,999 donation annually)"

then again....they do say there's one born every minute......

Blasphemy and 10-4!

Jim, if it weren't for DXCC, folks would have to go for some other
magazines DX awards. Even little newspaper print "World Radio" has a
DX award.

It would appear that there is finally some dissatisfaction with at least superfluous membership levels, as there should have been with superfluous licensing levels.

As my buddy Dave used to say, "Life is like a $hit sandwich. The more bread you got, the less $hit you have to eat."

Hams used to remark than we used 1st names in radio, not titles and rank. I wonder if the ARRL will ask their newest benefactors to sign, "/D$5,000" after their calls.

Larry, I could have used some meade (honey "wine") this weekend with the Scouts, but had to settle for apple cider. We camped in a 9,000 acre nature conservancy in SE Ohio (former strip mined coal, reclaimed sort of) called "TheWilds.org". Once all of the hissing coleman lanterns were out, you could see stars from horizon to horizon. The other Meade would have been nice to have also. We need to get code loving Vince to bring his telescopes out.

FWIW, the rains from Isadore stopped just as the wxman said it would, but it got a bit colder than predicted.

I'm scheduled to be out there again during the CQWW (ssb) for another Scout outing.

Not exactly. Homebrewing still serves to peak the interest of young
people.

Our Cubscout Bear Dens will be building Oatmeal Box crystal radios
this winter. We're going to come up with the wire from all of the box
fans that died this summer. I think the only thing we'll have to buy
is a package of 1n34s and "crystal" earplugs.

R, there's one about every weekend in the winter, but they don't have
multipliers for copying ARRL messages. Check the pages of CW or QST
under "Contests." I've got something crazy going through my head for
later this month. I'm supposed to be camping with the Scouts during
the CQWW weekend.

Bugbear spoofs email addresses. If you don't believe me, check:

http://www.pcmag.com/article2/0,4149,590320,00.asp

If you don't believe them, go to:

http://securityresponse.symantec.com/avcenter/venc/data/w32.bugbear@mm.html

It's all there, but if you just want to read the relevant part:

Quote from page... It then uses its own SMTP engine to send itself to
all email addresses that it finds. The worm also can construct addresses
for the "From:" field using information that it harvests from the
infected computer. For example, the worm may find the addresses a@a.com,
b@b.com and c@c.com. The worm could create an email message addressed to
a@a.com and spoof the "From:" address, so that it appears to come from
c@b.com. The spoofed address can also be a valid email address that the
worm finds on the system.

Why not? Really. It's no different a concept that the licensing structure.
You "can always get more if you" take more tests.

On the deletion of contest scores and the Section News from QST, I agree
it's a bad, bad idea.

>
> I note that the big spenders will get their QST via first class mail. I
> wonder if there is a level which will provide the plastic mailing
> sleeves formerly enjoyed by all at no additional cost.
>

I just really don't see the problem with "incentive" membership ideas.
Tradition in ham radio is to play by incentive, right? Why not in ARRL
membership as well? Perhaps those who can send in a few bigger bucks will
help memberships for the less fortunate to stay at a reasonable level.

>
> It is evident that the board of directors are operating on much
> different frequencies than the mainstream.
>

Mainstream what? The ARRL sets the standard for organizations like it, as
there are none like it, right?

Amateur Radio Newsline™ Report 1312 – October 4, 2002

Amateur Radio Newsline report number 1312 with a release date of Friday, October 4th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new world-wide threat to ham radio on 70 centimeters tops this weeks Amateur Radio Newsline report number 1312 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: A WORLDWIDE CHALLENGE TO 70 CM

If you operate on 70 centimeters anyplace in the world, listen up. Your future access to that band is in peril. Q-News Graham Kemp, VK4BB, has the details on how a proposed satellite system could run hams off of the band:

--
It has come to the attention of the South African Radio League, SARL that the threat to the 70-cm band -- world wide -- is once again very real. The SARL has just received a discussion paper which will be tabled at the World Radio Conference next year -- WRC-03 -- which directly targets the portion of 432 to 438 MHz for exclusive use by the planned Earth Exploration Satellite Service or EESS, due to be launched soon.

If this proposal is carried at the World Radio Conference next year it, will see this portion of spectrum allocated on a worldwide basis and this spells the death knell of all 70-cm ham radio operation.

The section of the proposal and the motivation is as follows: Agenda Item 1.38: '...to consider provision of up to 6 MHz of frequency spectrum to the Earth exploration-satellite service active in the frequency band 420-470 MHz, in accordance with Resolution 727 that was revised at WRC-2000.
--

But why target the Amateur Radio allocation at 70 centimeters? The researchers who want it say its the only frequency that will work. Again, Q-News Graham Kemp, VK4BB:

--
According to the United Nations Conference on Environment and Development -- UNCED -- held in Rio de Janeiro in 1992, there is an urgent need for assessment and systematic observations of forest cover and rate of forest degradation in tropical and temperate regions. Active space borne sensors Synthetic Aperture Radars (SARs) are needed to enable the monitoring of forest biomass.

Systems operating on frequencies around 450 MHz can penetrate the canopy of forests, and have the capability to determine the ground-trunk interaction and are in the context of forest cover information of particular importance.

Systems operating at 1.3 GHz, or higher frequencies cannot penetrate the canopy. The spectrum around 450 MHz is also optimal for monitoring of continental ice and for monitoring of vegetation and soil surfaces for desert and tropical areas.
--

More on this story in future Amateur Radio Newsline reports. (Q-News, SARL, ARNewsline™)

**

HAM POLITICS: HAM-CONGRESSMAN APPOINTED TO KEY HOUSE SUBCOMMITTEE

Back here in the U-S-A the ARRL Letter reports that Oregon Republican Congressman Greg Walden, WB7OCE, has been appointed to fill a vacancy on the House Subcommittee on Telecommunications and the Internet. Walden is one of only two amateurs in the U-S House of Representatives, and his appointment to the key House panel dealing with communications matters is considered good news for the ham radio community. Walden's selection was announced by Republican House Energy and Commerce Committee Chairman Billy Tauzin of Louisiana. (ARRL)

**

RADIO LAW: CONGRESS MANDATES DIGITAL ANTI-PIRACY

Meantime, congressional lawmakers have ordered the Federal Communications Commission to mandate technology preventing digital TV signals from being hooked up to the Internet and made vulnerable to piracy. The directive is viewed as a major victory for Hollywood film makers and other copyright owners at a time when the music business is being ravaged by Internet piracy. (Published news reports)

**

RADIO LAW: FEDERAL COURT RULES IN RF BRAIN CANCER CASE

A Federal District Court has dismissed an RF related mobile telephone brain cancer suit. According to the C-G-C Communicator, the court ruled that the plaintiffs had not provided any reliable and relevant scientific evidence to prove their case. The complete finding can be found in cyberspace at http://www.mdd.uscourts.gov/Opinions152/Opinions/newman0902.pdf (CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KA5GLX repeater serving Clear Lake Texas.

(5 sec pause here)

**

RESCUE RADIO: HAM RADIO READY FOR HURRICANE LILI

Following quickly in the wake of Hurricane Isidore, a Category 2 storm named Lili made its way across western Cuba and then took aim at the U-S Gulf Coast shoreline. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has more from New Orleans:
--

According to an ARRL Bulletin, the Hurricane Watch Net and W4EHW at the National Hurricane Center in Miami are again gathering ground-level reports using ham radio for communications into and out of the affected areas.

The Hurricane Watch Net is currently activated on 14.325 MHz with traffic coming in from numerous stations. Meantime W4EHW continues to exchange meteorological data and Spanish advisories with Cuban amateurs. Many of the reports received via ham radio have proven to be valuable to forecasters at the National Hurricane Center.

Right now all eyes are on Lili as she makes her way toward the U-S mainland. On Wednesday October 2nd the FCC declared a communications emergency as Lili approached the Louisiana and Texas shoreline. As we go to air, all hams not directly involved in hurricane related emergency communications are required to avoid using 7.285 MHz daytime and 3.873 MHz from sundown to sun up. These frequencies are protected plus or minus 3 kHz. The FCC declaration will remain in effect until rescinded and could be in effect for as long as two weeks.

Monitoring the storm and ham radio traffic from one of Lili's probable targets near New Orleans, I'm Don Wilbanks, KC5MFA, reporting.
--

Official advisories on Lili and other tropical storms can be found at the National Hurricane Web site. Its in cyberspace at www.nhc.noaa.gov. Late breaking ham radio operational advisories are at www.arrl.org. (ARRL, others)

**

SPACE AND SCIENCE: HURRICANE LILI CAUSES SHUTTLE LAUNCH DELAY

And a potential threat from Hurricane Lili to the Mission Control Center at Johnson Space Center in Houston has forced a delay in the launch of the STS-112 shuttle mission. Atlantis and its six member crew are now slated to lift off no earlier than 1800 to 2200 GMT on Monday October 7th. Once on-orbit, Atlantis will deliver the S-1 Truss to the International Space Station. The crew will perform three spacewalks at the station and will transfer supplies and equipment between the two vehicles. (NASA)

**

RESCUE RADIO: VK HAMS THERE AS PHONES GO OUT

Amateur Radio has come to the rescue after the town of Bindoon in Western Australia was isolated by communications failure.

For reasons yet to be explained, the failure of the phone system on Sunday September 22nd was total. Both mobile and fixed services went dead. No calls were possible.

A ham radio knight in shining armor in the form of VK6HGM rode to the rescue. Actually he drove to a hilltop and used the Roleystone repeater on 146.700 MHz in the hills above the city of Perth to report the telephone outage. This of itself is quite a feat, as both Bindoon and Roleystone are in the Darling Mountain Range and are out of line-of-sight from one another.

Be that as it may, the call for assistance was answered by VK6AX. He had telephone service and used it to alert the authorities and brought about a happy end to the story. Within half an hour, all telephone services in Bindoon were back on line.

**

ENFORCEMENT: NET UNDER FCC SCRUTINY

Turning to news from the FCC, word that the agency is taking a close look at a 20 meter net and its control operator. The FCC's Daryl Duckworth, NN0W, explains:

--
"The Enforcement Bureau has opened an inquirey into the Mobile Emergency and County Hunters Net operating on 14.336 Mhz. We have requested that James Grandinetti, who uses the call signs KZ2P and K2JG to respond to seven complaints about the operation of the net. The Enforcement Bureau also requested documentation supporting the club call sign of K2JG which is assigned to the Atlantic Amateur Association."
--

The FCC's letter to Grandinetti alleges that he harassed certain operators and banned other hams from using 14.336 MHz while he was operating as a net control station. The letter told Grandinetti that the frequency 14.336 MHz is a shared amateur frequency. As such, the operation of a net on that frequency conveys no greater rights regarding its use by Grandinetti than any other licensed radio amateur. Grandinetti was given the customary 30 days to reply.

**

ENFORCEMENT: PRIVILEGES REINSTATED

And still in the enforcement arena, some good news for a Martinsville Virginia ham. Again, the FCC's Daryl Duckworth, N-N-Zero-W:
--
"We notified Theodore Crutchfield, K4TFC, that since he has taken and passed an Element 1 code test as requested, his license remains Extra class and that he is in good standing."
--

By way of background, back on December 20, 2001, the FCC had notified Crutchfield that it was requiring him to re-take Amateur Element 1 under the supervision of the W4VEC Volunteer Examination Coordinator. This, on or before February 15th of this year. Crutchfield appeared for the exam session but did

not pass. As a result, he was notified on July 16th that the Wireless Telecommunications Bureau would downgrade his license from Extra to Technician Class. A few days later on July 21st, Crutchfield successfully completed an Element I examination in Roanoke, Virginia. Now, as Daryl Duckworth put it, Crutchfield remains Extra Class and his license is in good standing with the FCC.

**

RADIO ACCIDENTS: HAM INJURED IN TOWER ACCIDENT

A Michigan ham has been seriously hurt in a tower fall. According to an Internet report from Allen Stap, N8OKU , the accident involved the removal of a 160 foot tower.

Stap says that the top 120 feet was removed without incident. Daylight ran out so removal of the remaining 40 feet was deferred to the following morning. On inspection, the last 40 feet appeared to be safe and the removal work began. But the base of the tower broke apart and the tower fell with the ham on board. It landed on a polebarn with the ham crushed between the tower and the roof.

The accident happened near the town of Lawton. The ham involved was not identified by full name or call sign but was described as a long time and experienced tower climber. His injuries included a broken jaw, two broken arms and a broken leg. The good news is that he is expected to make a full recovery after extensive rehabilitation.

**

RADIO ACCIDENTS: NEBRASKA TOWER COLLAPSE KILLS TWO

And a 1,965-foot television tower collapsed Tuesday September 24th in a western Nebraska field. Two workers were killed and three others were injured.

The tower was located near the town of Hemingford. A spokesman for its owner, Duhamel Broadcasting Enterprises of Rapid City, South Dakota, said two of the workers were repairing the roof of the near-by transmission building. The others were strengthening the tower so it could be equipped with high-definition television antennas.

The structure was built in the late 1960’s and was used to transmit the signal for Scottsbluff television station KDUH throughout most of the states panhandle area. It and was the tallest structure in Nebraska, and was some 500 feet taller than the Sears Tower in Chicago and 700 feet higher than the Empire State Building in New York. The cause of its collapse is not yet known. (K0NEB)

**

OPERATING EVENTS: ARRL DEVELOPING JOTA DATABASE

Jean Wolfgang, WB3IOS, of the ARRL Field and Educational Services Department writes to say that the League has set up a first ever scouting Jamboree On The Air event database. It comes as the result of requests to Jean from scouting

groups looking for hams who plan to offer their services to the event. You can register your JOTA event by taking your browser to the rather complex U-R-L you will find on the web at http://www.arrl.org/FandES/ead/jota.html. T his years Jamboree On The Air takes place October 19th and 20th, local time. (ARRL)

**

OPERATING EVENTS: SHIPS ON THE AIR

The USS Cassin Young, a museum ship in Boston on a turn around cruise will operate an Amateur Radio station from her radio room during the voyage on Saturday, October 12th. Operators will pass commemorative US Naval style messages between that ship and the USS Salem. The Salem is another museum ship berthed in Quincy Massachusetts. Operation will be on 20 and 40 meters. For a commemorative certificate send an SASE and a copy of the message you hear to Bob Callahan, W1QWT, 56 Acorn Street, Scituate, Massachusetts 02166. And less we forget, of the two ships involved the USS Cassin Young is a Destroyer and the USS Salem is a heavy cruiser. (W1QWT)

EMERGING TECHNOLOGY: THE SCIENCE REPORT

Two interesting items from this weeks science page. Here are Jim Damron, N8TMW and Jeff Clark, K8JAC.

--
EMERGING TECHNOLOGY: TECHNO-JUNK PILING UP

A new study called Waste in the Wireless World: The Challenge of Cell Phones says that 130 million wireless devices will be discarded annually in the United States. This equals 65,000 tons of two-way radio garbage.

The study makes several recommendations regarding both the design of cell phones and the disposal of them. It says that the use of toxic substances in them be reduced. It also suggests that device standardization be implemented so users are not forced to purchase new phones when they change service providers or for travel. Finally, the study says that cellular telephones should be

designed for disassembly, reuse and recycling.

It should be noted that the study was limited to cellular phones and other two way radio devices. It does not include the tons of VCR’s and TV sets that are disposed of each year. (Supplied by several ARNewsline(tm) listeners)

**

EMERGING TECHNOLOGY: BARCODES CAN SAVE LIVES

You know those bar codes that grocery workers scan to let you know how much your cereal costs? Well, hospitals are now using the same technology to help save lives, thanks to a computerized medication system. A nurse scans the bar code on a patient's I-D bracelet, along with a bar code found on the medication itself before administering the drug. This enables the computer to verifies and checks the bar codes to make sure the patient is getting the correct medication. A green signal tells the nurse it's okay to precede. An error warning, and red signal, alerts the nurse if something's not right.

To date, only about two percent of the nation's medical facilities use bar code technology to verify medication administration, but that number is expected to rise. Statistics show the system prevents anywhere from 84 to 264 potential errors a week at one hospital alone. (Science Today)
--

More emerging technology news, next week.

SPACE AND SCIENCE: JAPAN DELAY COMPLETION OF ISS MODULE

Completion of the international space station hit another snag. This as Japan's cash-strapped space program announces that it would delay launch of the bus-sized research module it is building for the project.

The research capsule called Kibo is the only part of the space station developed and run by an Asian country. It was scheduled for launch sometime in 2004. Liftoff of that module is now planned for April 2005 at the earliest. (Published reports)

**

INTERNATIONAL - GERMANY: DDH47 CELEBRATES 50 YEARS OF SERVICE
November 8th and 9th will see a special station on the air from Pinneberg Germany. This as Weather Service's station DDH47 will be operating crossband on 147 kHz and listening on 80, 40 and 20 meters CW to celebrate its 50th anniversary of the service. Slow speed Morse transmissions to North America are also planned. (G4NJH)

**

INTERNATIONAL: FIRST UK TO VE CONTACT

Sunday, September 22nd marked the 84th anniversary of the first radio message from the United Kingdom being received in Australia. On the 22nd of September

1918, a message of goodwill was sent in Morse code from the Marconi station located near Caernarfon. The callsign was M-U-U, and the 200-kilowatt transmitter was on 21 kHz, a wavelength of 14,300 meters. The signal was received at
Wahroonga near Sydney by Sir Ernest Fisk, an Englishman who had served under Marconi in England. The message of goodwill was published the following day on the front pages of the Australian morning newspapers. (GB2RS)

**

DX

In DX, word of the first 6 Meter contact from Afghanistan. Nick Peckett, G4KUX, writes that he made what he says is the first-ever contact on 6 metes from Kabul at 15:15 UTC on Tuesday
the 24th of September. Peckett, operating as YA4F, contacted YF1OO in Indonesia. G4KUX says that he hopes to be able to give many others their first opportunity to contact Afghanistan on 6 meters over the next few weeks. (GB2RS)

And lower in frequency, TM4ENN is a special event station in France to commemorate the 60th anniversary of the creation of the 'Normandy Niemen' air flotilla by General de Gaulle. It will be active on 40, 20, 15 and 10 meters internationally. QSL direct with an stamped and self addressed envelope to F6BZH, or via the bureau. (GB2RS)

**

THAT FINAL ITEM: BY-BY BETAMAX

And finally this week, a legend is being put to rest. After twenty-seven years in production Sony Corporation says that it will finally put its famed Betamax tape format to bed forever. Our producer Bill Pasternak, WA6ITF, takes a nostalgic look back:

--
Its said that Betamax opened the world of home video as the first practical consumer format. Sony, J-V-C and Panasonic first tried with the famed 3/4 inch U-Matic machines, but consumers were reluctant to buy a videotape machine that was bigger than most T-V sets of that era and looked more at home in a television station than their livingroom.

My own first home VCR was a Sony SL-7200 Betamax. It would record a whole hour of pretty high quality video and audio on a tape cassette that was only 3 1/2 by 6 inches in size. I paid almost $2000 for the machine and each cassette cost me close to $25. That was in the late 1970’s and despite loosing the 1980’s video format war to VHS, Betamax held on as a niche product all these years.

Now, according to Larry Bloomfield’s Tech Notes news service, Betamax for consumer use is being phased out. This is because of the new consumer digital tape formats like Mini D V that are literally delivering a death blow to Betamax’ future prospects.

Sony reportedly will manufacture only 2,000 more Betamax machines before discontinuing the product altogether. But Beta will live on in the world of television journalism. Thats where a spinoff tape format called Betacam with suffixes like S-X and S-P became the defacto news gathering videotape of choice and have remained so for the past decade and a half.

With an SL 7200 Betamax still sitting someplace out in the garage -- gathering dust -- I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

And you thought that the Betamax died a quiet death many years ago!
(Tech-Notes, ARNewsline™)

>I learnt to drive a car so I could drive a car, but I learnt CW so I could >use HF phone, that's like learning to drive a car so I could row a boat!

Not at all. It's like being required to learn to drive a stick-shift car, even though you have no intention of ever buying a stick shift car.

I, too, learned CW in order to get the license to work HF 'phone. My original interest in amateur radio had been sparked by listening to hams on 75 AM.

Funny thing, though - once I learned the code and started using it, I found it to be more fun than merely talking.

True, but most ham gear designs aren't anywhere near that critical.
>
>Also, there is the issue of component density.
>That has become paramount with surface-mount
>stuff. There is no way that density can be
>obtained without a printed-circuit 'substrate'.

You ever work on a WW2 "Command Set" receiver? Some serious density there!
Also lots of hand labor. Main point is that PCs reduce the cost advantages of
homebrewing.
>

> But none contained a frequency
>synthesizer,

Wasn't needed. Synthetic VFOs don;t improve basic radio performance - in many
cases, they are worse than their analog predecessors (i.e., phase noise). What
synthetic VFOs do is allow more features.

>complex image-rejecting IF mixing
>schemes,

Nothing complex about up-conversion, which sacrifices certain performance
measures to improve others.

>frequency memories,

Just a function of the synthetic VFO.

>RF transmit
>processing and other "standard" features.

Bells and whistles, you mean. Handy but not essential. In most cases they don;t
improve the basic radio performance.

>I
>don't think those would be available at anything
>like a reasonable price or size with discrete
>transistors, never mind vacuum tubes.

Agreed. But they are not a big deal. The Ancient Ones were working the
Antipodes with QRP and wire antennas 70 years ago.
>

What "high-speed code test"? The USA has never had a high speed code test for a ham license.

Practical homebrew tests that I have seen suggested were extremely basic - no more than soldering tests. And the impracticality of such tests was easily demonstrated. No way they'd have a chance to become reality.
>
>K7JEB:

Add to the above: Propagation and antenna theory.

> The stares
>really got blank if I tried to make the point that,
>contrary to expectations, the more wire on the
>loading coil, the poorer the overall radiation
>efficiency. Of course, these were CB-using
>truckers, so some slack must be provided.

What nonhams think is not the issue. What is troubling is when hams have that level of ignorance.

>Still,
>if there is an essense of amateur radio, I
>like to think it is the understanding of how
>things work.

Some care about how it works, others don't.

>Of course, a powerful physical
>manifestation of that understanding is the
>completion of a homebrew radio project. But
>the understanding, such as it is, comes first.

And there you see the connection between homebrewing and the essence of amateur radio. And why some folks make such a fuss over it. But the fact is, economics works against it.
>
>N2EY:
>> Here's one last point: Economics has yet another
>> angle: resale value. Most true homebrew rigs are
>> difficult or impossible to sell. Manufactured or kit

>
>It has completely baffled me that the unique
>character of homebrew equipment has not been
>recognized.

I've recognized it for years. Ask W3RV.

>A Japanese ham will lay out $25K
>for a Collins KW-1 but spurns the one-of-a-kind
>AM transmitter of a similar power level put
>together by an Iowa farmer back in the forties.

Not a good comparison. Collectors are not bound by the rules of logic. If you want a rig that does what the KW-1 does (legal-limit AM and CW with BA technology), you don't need to spend anything like $25K. The JA ham is buying it for other reasons.

Heck, an unbuilt Heathkit AT-1 (1956 vintage) went for $5100 on eBay. That's not a typo - five thousand one hundred dollars. And the AT-1 was a piece of junk even in its own time.

>Maybe such artifacts need exposure and expert
>appraisal on 'Antiques Roadshow' or some
>similar venue.

Watch that show carefully - the genuine article brings much more money than reproductions and imitations. Has nothing to do with innate value, and evertyting to do with "eye of the beholder".

>I predict, and mark my words
>well, that when the rarity of homebrew ham rigs
>is recognized as being greater than pre-Columbian
>native American sculpture on E-Bay that the
>sky will be the limit on the prices of such 'finds'.

Rarity is only one dimension of it. Art is in the eye of the beholder.

When an individual, operating under the terms of his licensing, encounters another individual who has no first hand knowledge of events making absurd accusations, there is little choice except for denial. You have no problem with attempting to smear my name for reasons known only to yourself but you certainly don't care for the same tactic when it is directed at you.

Wanna play a few rounds of "there I was bootlegging from Somalia"?

If you think phone is like driving an automatic, then obviously you have
never been in a pile-up on phone - or maybe you have and that's why you
use CW!

1712. Proposal for an Amateur Voice Switch by g1sle

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-07 06:07:41 UTC
From: g3zhi@hotmail.com
Message-ID: <3da69433.1744811@news.btinternet.com>
Source record: 53479

So what is an amateur voice switch?

Basically you can think of it as a bit
like a small telephone 'switch', like the
sort of thing a small business would use.
The proposed switch has 8 'extensions' or
in our case 8 radio channels.
A user with access to any one of these
channels is able to dialup any of the
other 7 using DTMF commands and have a 1
to one conversation.
He is also able to dial a 'conference
bridge' if other users are also connected
to the bridge he will be able to join in
the conference, up to all 8 users may be
on the bridge at any time.

So what hardware is involved in the
'switch'?

The switch itself is a small rack
mountable unit containing up to 8 'radio
interface cards'
Each radio interface has a unique number
(effectively like an extension number) and
for reasons that will become obvious the
switch also has a unique number.
Each radio interface connects via a simple
cable (audio in/out, PTT in and Busy out)
to its associated radio.

So what frequencies do the radios use?

Any within the amateur bands.
No really I mean it, from top band AM to
248Ghz FM including repeaters, simplex
channels and channels linked to the
various internet linking systems. As long
as the radio provides RX audio and a
channel busy signal and accepts microphone
and PTT in, it will work on the switch.
Infact, thinking about it the connection
could be direct to an IRLP node.
My proposal is that the channels currently
used for internet linking along with
existing repeater channels would be ideal,

this new technology is complementary to both and would benefit both the existing repeater network and internet linking.

From a users point of view what can I do and how do I do it?

Lets setup an example system.
Suppose we put up a 5 port switch with radios on port 1 GB3EE, port 2 GB3DY, port 3 145.2875, port 4 70.2625, and port 5 2310.025 we'll make our switch ID 1 for this example.
We'll put our switch in Bolsover for now

A user on EE may wish to link to DY in order to have a better chance of getting a reply to his CQ calls. To do this he would simply use his DTMF keypad to dial *12*. The switch interprets this as ' connect me to port 2 on switch 1.
The switch will then check that the required port is free, make the connection and alert on EE and DY, the user can then put out his CQ which will be heard on both DY and EE, any reply will also be heard on both repeaters. When he is done he dials *10* which is interpreted as 'connect me to nothing on switch 1' the connection is closed and both repeaters are then independent.

Lets look at another example
A 4 mtr mobile user is finding the band a little quiet, so he goes to 70.2625 and dials *11*
This connects him to GB3EE where he is more likely to find a QSO, but because of the excellent propagation to mobile users on 4mtrs he is also able to hold the contact many miles further than he could hope for on his 70cms set.

Another example
A user on DY would like to use internet linking, but DY has no IRLP connection, so he dials *13* which connects him to 145.2875, since there happens to be an IRLP node on .2875 local to the switch he can then dial on via IRLP to any of the several hundred IRLP nodes available.

Getting the idea? Think about this one....
A user on EE wants to talk to a friend in (say) Birmingham.
He dials *15* this connects him to the 13cms port on 2310.025Mhz, a similar switch located in (say) Lichfield also has a port on 2310.025 and a second port on GB3GB.we'll make this switch number 7 for our example.
So once our user hears the connect confirmed to port 5 on his switch he dials *72* this will be ignored by switch 1 his local switch but will be picked up by switch 7 as a request for port 2, he will then be connected from EE to GB via a 'pipe' on 2310.025.

We can go on adding ports and switches up to a maximum of 10 switches each with up to 8 connected channels, after that we would have to go to 2 digit switch numbers allowing up to 100 switches of 8 channels, a fairly powerful and flexible network by any standards.

So what about the conference bridge?

Simple, a user wishing to use the bridge just dials *19*, the requested 'port 9' being interpreted as a request to join the bridge, he is then connected and traffic can pass to/from any other users on the bridge - IRLP users may recognise this - you will know it as a 'reflector'

But people will forget to shut down unused links won't they?

Yes of course they will, its human nature, that's why I put timeouts in, if a channel remains permanently busy for 3 minutes it will cause an auto disconnect, also if a connected channel remains without activity for 10 mins it will be disconnected.

You mention some 'prompts' how exactly does the switch tell the users what's going on?

All user prompts are in morse, the system is based around 8bit microcontrollers running at just 12MHz. Each micro has available just 4 k of code space and 128

bytes of RAM.
This leads to a system which is cheap, stand alone and reliable, unfortunately however it doesn't have the power to run voice prompts.
When a user connects to a port the number of the connected port is sent in MCW at each end of the link, thus as a link is setup between port 1 and 2 port 1 will hear a '2' and port 2 will hear a '1'.
When a link is disconnected either by the user or by a timeout both ends will hear a 'diss'.
If a user attempts an illegal operation, connection to a non existant port, connection to his own port or whatever he will hear an 'err'
Attempts to connect to a port already in use will get a 'bzy'

But isn't this dreadfully spectrally inefficient?

If correctly engineered this could improve repeater coverage in a way that would be much more efficient than many others.
Consider this example.
Handportable coverage from the existing repeater network in many areas is very poor or non-existant, one solution is to put up more repeaters, each using 2 frequencies.
Since many of the areas of poor coverage are sparsely populated in terms of radio users this is poor use spectrum, 2 frequencies are being used often to provide coverage to only 1 user at any given time.
Suppose we site a switch in one of these areas , provide a simplex port and a port on the more busy local repeater. We have now provided coverage in the problem area using only 1 frequency rather than the 2 required for 'full' repeater coverage.

So why isn't this on air now?

I have over the last few months developed the system to a point where I have 3 prototype radio interface cards on a switch allowing calls between any 2 of the

3.
Since operation of such a switch is
outside the terms of my licence I need an
NOV to operate it just as an NOV is
required to operate an internet link or a
repeater.
The Radio Agency have indicated to me that
they have no 'in principal' objection to
the idea, they have now passed details to
the RSGBs Repeater Management Committee
who will hopefully see the enormous
benefit that this new technology could
provide to the repeater network and
amateur radio in general and give the
project their full support.
Once the RMC approves the project I can
quickly obtain an NOV and move to on air
tests, I expect that development and
testing of the full 8 port switch may take
up to 6 months from my NOV arriving,
however service could begin to be provided
on DY and EE almost immediately.

Jeesh.... someone donates between $2500 to $4999 on an annual basis, they
should get a book or two free, screw the ten percent....

All true and good advice. With rare exceptions, old homebrew stuff has always been a tough sell - another reason for the decline of homebrewing.

The rare exceptions (in radios, cars, boats, etc.) are:

- a homebrew project or series that became well-known and well-documented, such as the HBR receivers

- a unit that is a good source of parts. But often parts units are worth a lot more when torn down for their components. Hand labor cost and all that.

>homebrewing.

Bingo. And it's not a new story.

Back in '77 I shelled out about $300 for a Heath HW-2036 2 meter rig. Kit. Dinosaur compared to the FT-1500. But it was a bargain at the time, being one of the first synthesized 2m ham rigs. Lot cheaper than buying xtals for all the local repeaters! I could not have homebrewed a '2036 equivalent back then for $300 from new parts even if I had the necessary tools, test gear, experience and time.

>And in all but some rare instances good riddance.
>
TNX!

Ya want folk art, visit the Mercer Museum.

--

Collection mania is all about perception and reputation rather than reality. Somebody cited "Antiques Road Show" (ARS, it sez on their travel cases). Here's a favorite ARS story:

Couple years ago, two sisters brought in a Tiffany-style table lamp. Very good condition, original shade, worked perfectly, had been in the family since it was almost new. They used it in their living room. A local dealer had told them it wasn't genuine, because the base/column were cast metal, and Tiffany used carved wood. They thought it was worth maybe $200.

But the expert said that for a brief time in 1904 Tiffany had made metal-base table lamps. Only six were known to survive, and none of them were as nice as the one the two sisters had. Expert said the lamp would go for at least $120,000 at auction.

Why was that lamp suddenly worth 600 times its previous value? It was still the same lamp. Same colors, same construction, same materials. All that had changed was that it had been positively identified as a genuine Tiffany.

That's why KW-1s sell for $25k.

Ooops! Sorry about that. That explains why I couldn't find the
thread on .policy.

> The same is true today, but the money saved is less.
> Note that building a kit is not homebrewing.

True enough. I can see that 'real' homebrewing requires
designer skills while building, and perhaps troubleshooting,
a kit is more in the realm of a 'maintainer'.

K7JEB:
>>The uniformity issue is particularly apt with
>>high-performance analog IC's....

N2EY:
> True, but most ham gear designs aren't anywhere
> near that critical.

I'll agree. A little care (and understanding) in
component placement helps a lot.

>> Also, there is the issue of component density....

> You ever work on a WW2 "Command Set" receiver?
> Some serious density there! Also lots of hand labor.
> Main point is that PCs reduce the cost advantages of
> homebrewing.

Yeah. I had in mind getting 60 dB of IF-Amp gain
out of a postage-stamp-sized area on a board. Or
the number of transistors per square millimeter.
That kind of thing.

>> But none contained a frequency
>>synthesizer,

> Wasn't needed. Synthetic VFOs don;t improve
> basic radio performance - in many cases, they
> are worse than their analog predecessors
> (i.e., phase noise). What synthetic VFOs do
> is allow more features.

I was thinking more about ease of operation in
finding one's way around crowded bands and
holding a net frequency as being a significant

advantage. I guess I place a lot of value
in that.

> Look at the Elecraft K2 and K1 designs......
> You can download the manuals from their website.

Good suggestion! Thanks.

> In ham gear, it's still at the discrete-transistor level.

Maybe I really better look at those Elecraft
schematics!

K7JEB:
>>Well, there *have* been semi-serious proposals to
>>substitute some kind of home-brewing practical exam
>>for the late, lamented high-speed code test.

N2EY:

> a high speed code test for a ham license.

Yeah, yeah. Anything less than 35 WPM is toooo slooooowww.

> Practical homebrew tests that I have seen suggested
> were extremely basic - no more than soldering tests.
> And the impracticality of such tests was easily
> demonstrated. No way they'd have a chance to become reality.

I can't see any realistic way of implementing
it either. Anything involving a construction
project or extensive demonstration of learning
would tend to be more of a technical course than
a single exam.

>> I would be satisfied with just an understanding of
>> how radio works

> At what level? Being able to explain Maxwell's
> equations? Being able to explain how a regenerative
> detector works? Being able to give a rudimentary
> block-diagram explanation of a modern HF transceiver?

That's the crux of it, Jim. I don't know
where to draw the line anymore than anyone
else. I sure wish that it was there in a
bit more depth than we have now.

>> .....Of course, these were CB-using
>> truckers, so some slack must be provided.

> What nonhams think is not the issue. What
> is troubling is when hams have that

It's your call, Alun...but I think it's safe to say that Jim's seen,
been in, and broken many a pile-up on phone...looooooong before 1980.
I think he merits a tad more respect than the statement above
conveys...even if solely based on experience.

WHAT??? You think as a USA ham for 52 years is going to donate five to ten grand to an organization that has done little for my hobby except dumb it down and trying now to eliminate CW so their off-shore advertisers can build cheaper radios that only operate FM or SSB? Not me Buddy, I wasn't born in England, you know!

No, they have not, Vince...Sorry it's not EXACTLY what you want, but what
is?

>We might as well calls hams CBers now.

Why? Other than occassionally eharing a new Ham say " the personal here
is..." (corrected after a faace-to-face at a club meeting or Hamfest), there is
NONE of the so-called CB activitiy on the air, save for teh usual "Liberty Net"
and 14.313 idiots. And let them stay there. The rest of Ham Radio is fine.

>I'll never join that piece of crap organization again.

OK. Thanks for sharing.

No, that isn't even close to being correct. The ARRL is not a piece of trash nor did it ruin amateur radio. The League has a board of directors which sometimes makes bad decisions depending upon who is sitting on the board. At other times it allows the staff to implement some poorly framed plans.

You can't effect change in the ARRL from the outside.

If that is what you believe, Walt, you might be getting most of your information from American TV. I might add that the only place on the earth I've ever been served luncheon meat sliced thinly enough to read a newspaper through it was in England.

>this one scheduled for the Winter?

Interesting concept, one which I've had myself in the past. There's a big
difference in setting up a "field" operation site when the weather is at least
tolerable -- doing so when you have to keep warm adds a real challenge. Also
there is the chalenge of driving tent stakes, ground rods, and tower pilings
into frozen ground, dealing with heavy snow, etc. In my area, the winters are
typically quite mild compared to what they get further North, but still, it
would be interesting to try it. Even the problem of having a shorter daylight
period would add interest. I like the idea, myself.
What say others?

The whole thing is a spectrum, ranging from the original custom homebrew design
at one end, to the semi-kit with extremely specific instructions. In between
are the homebrew project copied from an article, the kit which requires some
skill in assembly, etc.

I'm not sure what you mean by "finding one's way around crowded bands" and
"holding a net frequency". The analog-VFO rigs of 40 years ago gave lots of
flexibility if properly set up (two VFOs).

Features like memories don't help you hear the weak or buried ones any better,
nor do they help others hear you better. They are conveniences, which isn't a
bad thing.

>> Look at the Elecraft K2 and K1 designs......
>> You can download the manuals from their website.
>
>Good suggestion! Thanks.

Note that the RF design is a mix of transistors and fairly common ICs. No
surface mount or multilayer boards. You wind your own toroids. Yet the
performance, particularly receive performance, is right up there with the top
rigs.

The written tests have always been a mish-mash of various subjects, driven by
various reasons. Historically, the tests covered areas where hams had gotten
into trouble with the FCC. That's why the old tests were full of questions
about power supply filtering, band edges and how to get a clean signal.

A lot of ham radio's problems stem from cb users getting ham licenses and
bringing their bad habits, poor attitudes and technical ignorance to the ARS.

>Or that radio
>users of any stripe have some idea of how the

>box works.

There are plenty of hams who know the technical end of things. Their percentage is less than before, that's all. Such knowledge is no longer as essential to operating a ham station as it once was.

Remember too that the cost of test equipment and tooling must be considered.

In the bad old days, a small kit of inexpensive hand tools and a few pieces of basic test equipment were adequate for building almost anything in the ham station. Not any more!

Maybe you're right, but I don't think his analogy of phone as an automatic and CW as a stick shift fits. The automatic would be a no-tune, all solid state rig and the stick shift would be a tube rig where you have to tune the plate and grid and adjust the drive. But then that's a different argument, isn't it! I have met, by the way, people who operate CW solely because they don't like phone pile-ups.

I don't really have anything against CW ops, but I will never really understand why some of them treat it as some sort of religeous article of faith. I recently bought an FT-817 and I am really having a blast using 5 watts of phone, even working DX with it (mobile!). Doubtless someone will post that I would be having even more fun on CW, but the fact is I wouldn't.

Great! Wind the coils on varnished toilet paper tubes, they're much more plentiful than oatmeal boxes and the kids won't hafta eat piles of oatmeal to get themselves a coil form. Unless that's part of the "design intent". 1N34s are for weenies, I used real Galena crystals with cat whiskers. Dunno where you can get those today. I once built a crystal set into a WW2 surplus headset. The antenna was a straightened-out coat hanger "vertical" attached to the headset, my 1940s predecessor to the Walkman. Yes it worked. Neighbors saw me wearing the thing, called my Dad and asked "what the hell is THAT kid of yours up to THIS time?" Did the xtal set not too long after I blew the windows out of Mrs. Chandler's chicken coop with my 4" calcium carbide cannon and her chickens din crank out any eggs for a week. I had a bit of a . . ummmm . . "reputation" amongst the villagers so I reckon my Walkman musta "raised some concerns" . .

Nice xtal set website:

http://www.midnightscience.com/

Back when ya had to actually build an operating tube-type rcvr AND know the code at least on paper to get the Radio Merit Badge. Which experience was a real boost to getting me into ham radio. I notice

that today a Tenderfoot can get a Radio Merit Badge by just sitting on his butt and TALKING about "radio" and forget the code. Disgusting to the core.

It's not bigoted tripe, Hans. It's electropolitically incorrect, though. It's something I've witnessed time and time again for many years.

Maybe you don't see it/hear it where you are.

Yeah, they're different critters. They also take much better care of
elderly parents on average than we do. Old is good and worshipful to
them. Old to us is just old to useless and worse.

Hey, don't feel bad. An elder in the town where I was rasised found a
complete 1940s RCA police car radio in the basement of a long-gone
mayor about five years ago. Complete with it's 6v rotary dynamotor,
2.1Mhz AM rig and control head w/carbon mic. I'm told the cops usta go
dxing with the things in the wee hours when 160 was open. There was a
pretty reliable path between here in the Philly area and some burg in
Alabama, there were even traffic relays over that path if a mobile
couldn't hit it's own base. It wasn't much different when they moved
to 39.5 Mhz and 6m was open.

The only difference between the American and other cultures is that we not only openly admit that fact, we print it on t-shirts and sell them.

Hey, that's a great idea - the incentive for the "we speak high-tech"
folks to learn Morse without being prodded to do so by the licensing
authority.

Whatever works.....

We must travel in different circles, heh heh. Our luncheon meat was
served in a very chilly house in Dorchester by a Canon Roberts.

> The USA, on the other hand, is the only country I know where more food

We have no need to demonstrate it to each other. Maybe you've just seen
the red carpet rolled out for those visitors who come from places where
the luncheon meat is thinner than the lettuce leaf. Our rationing ended
with VJ Day.

OH YEA? How about multipliers for Florida stations operating in the middle of the monsoon when FD is traditional scheduled---IN THE LIGHTNING CAPITAL OF THE USA!!!

We can tell stories that will stand your hair on end you can be sure.

With the increasing popularity of FD someone or someone's gonna get killed from a strike.

I'm no candy ass, I've been around... but more than once I felt I wouldn't make it back from my FD tent out on the ranch in the middle of nowhere during a typical Florida thunderstorm---I just plain got scared on more than one occasion.

Well, I don't know how much time is required for "looooooong", but I have done a bit of 'phone over the years. 35 years a ham, this coming Saturday. Something quite appropriate about the fact that my first license was effective on Columbus Day, and arrived on October 14, 1967 - 20 years to the day after Chuck Yeager broke the sound barrier.

One of the most challenging tricks was working SSB stations on 6 meters using an AM-only rig (Lafayette HA-460). If the sidebander talked slowly and clearly, the walrus-like sounds could be understood well enough to get the FD exchange.

The real trick to busting pileups is being where the pileup isn't. Like the time I worked W1BCG....

>I think he merits a tad more respect than the statement above

Combination of making fattening foods plentiful/cheap and sedentary
lifestyles is a recipe (pun intended) for it.

> Hey, Walt...Don't knock it! As long as people here insist on eating dumb,
> I have a job! Peripheral vascular disease, diabetes, COPD, etc all go with > > the

Absolutely.

There was a study done in one of the Easter European countries
(Czechoslovakia?) that showed cigarette smoking to have a positive
effect on the national budget (!). The data claimed to show that
smoking reduced the average lifespan of Czechs in such a way that much
less needed to be spent on retirement pensions and long-term senior
health care. IOW, smokers tended to die quickly soon after reaching
retirement age.
>

I'm sure there are places where we've helped starving populations
without being shot at. But if they don't want us there, I say leave
'em alone.

There was a study made about 40 years ago in Israel to try to
explain why the immigrants from Yemen had far less heart problems
than inmigrants from more debeloped countries. They tried to pin it
on the diet - far less meat, negligible fat, more vegetables, etc.

They missed the point entirely that the major difference was that the
Yemenite culture was pretty laid-back and what we call "Type A"
personalities were virtually unknmown.

So much for "medical science".

PS - my secretary - a very beautiful woman inside and outside - was
from the Yemenite community and rapidly developed all the "Type A"
characteristics of her Western contemporaries. So much for
assimilation.

I got some Galena at the local mall of all places. There was a "Earthly Treasures" store, which has fossils, minerals and similar collectables. I picked up a beautiful galena crystal for a dollar or so,

R, you've got a point there. If your tropopause weren't so high, the
thunderstorms wouldn't get so damned big. We'll grant you a 1,000
points for each lightning dead transceiver.

Then you can go to the beach and enjoy tourist watching.

They'll be logging stations in the AM broadcast band as well as on
shortwave. Study radio and prop theory. I think code is still
required. I mean its just for a cloth patch after all. No operating
priveleges.

When a couple of guys can do moonbounce with 85 watts I tend to believe that IF you know what you are doing, you don't need a ton of power to work dx. That, however, is a big IF. I'd hate to count the many times I ragchewed with Norm, VK2NP, in Australia for hours on end - running 100 watts. Solid copy both ways many many times.

Alun:

Is that *really* a fact? Have you ever tried CW? If you didn't, you really
don't know how much fun you'd be having with it, do you? The simple
truth is that most who have (by licensing requirement) learned CW and
began using it on-the-air have come to the realization that it is, indeed,
a lot of fun! I really think you ought to give it a chance! Unless you do,
you're consigning yourself to a mode which I found to be not much
"fun" at all!

Interesting reply. No, I've never operated CW, so I can't say for sure,
but I had such a hard time learning it that it really turned me off it.
And I might add I lost so much phone operating time that I haven't made it
up yet.

The really interesting thing is that you admit you don't enjoy operating
phone. I have no problem with that. You don't like phone and I do, and
vicea versa, you like CW and I don't. Live and let live. Learning to speak
is a pretty basic skill for functioning in soceity (although doubtless
someone will post that they get by fine in sign language!), but learning
CW is only any real use in a very limited range of situations. Outside of
the ham bands, I don't rate very highly your chances of being understood
in Morse code in the 21st century.

So, this leads to the age old question - why did I have to learn CW to use
HF phone? None of the answers I've heard over the years are in any way

convincing, although some of them may have been way back in 1927, but have lost all significance in the intervening years.

1768. Interesting Thoughts..... Good Amateur Practice

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-10 05:35:05 UTC
From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <ao3mg151qk4@enews3.newsguy.com>
Source record: 53637

(I maintain a weekly newsletter in my local area, and someone forwarded this to me, to include in it. Thought it may be of interest here.)

Ryan KC8PMX

"Good Amateur Practice is a hard thing to define. I'd have to say it's operating with the realization that frequencies are shared, that there's going to be occasional interference and that's no reason to become hateful and paranoid. You have to realize that more people listen than ever before, especially since the events on 11 September, and our rights end where another person's begins."

"It means giving a little ground even if you have a right not to, in order to help preserve Amateur Radio and not cause it to get a bad name or hasten the day when it becomes obsolete."

"It means not using that one Kenwood rig on 6kHz bandwidth when there are lots of people on the band."

"It means not acting like an idiot just because you were stepped on. It means being aware that we all love Amateur Radio, and why damage it just to save face?"

"It means cutting a net or a contester a break even if you don't have to and even if you have no interest whatsoever in nets or contesting."

"It means being nice, because one thing we don't need more of are idiots in the radio world. Now this doesn't touch on a lot of technical issues such as using 1,500 watts when your signal report received is 20 over 9."

"It just means a lot of things that can't be qualified, such as respecting a band plan because it makes it possible for every mode to have a chance."

"It means operating so that if a neighbor, niece or nephew or news reporter hears you, that person is impressed with Amateur Radio."

"It means realizing that every right carries responsibilities, and just because you may have a right to do certain things doesn't mean it's right to do them in every circumstance."

"It means just because you haven't done a creative thing in Amateur Radio in 25 years, and have been on the same frequency every morning for 135 years shooting the breeze with Harry, who's 200 miles away, doesn't mean you own the frequency."

"It also means NOT operating so whoever hears you becomes sorry as hell they ever got into Amateur Radio in the first place."

Well, a winter Field Day here in Northern California would be just like
regularly scheduled field day in some other parts of the US. When I was
in the Northeast, Field Day was always the last rainy weekend in June.
A winter Field Day here would be rainy. As for lightning, wouldn't see
much of it here, but I've been chased off a Field Day site in PA by a
thunderstorm. When the trees on the back end of the lot were taking
strikes, I decided it was time to put the radios away, didn't want to
incinerate my rigs.

Right. There was more to that show than the obvious. Galena is
available by mail order from a lotta sources in the mineral hobbyists
sphere. The trick is finding & potting a "hot" nugget of the stuff.
Building a decent cat whisker is not a very tough task but ya gotta
actually get off yer dead arse DO it. Finding a hot spot with a cat
whisker was most of the whole ballgame, the real challenge. The advent
of the 1N34 took that challenge away just like not having to pass a
real code test to get a ham license has muted the big kick in getting
a ham license.

Godammit that attitude & set of values is exactly what has been
feeding the thrust to dumb down the requirements for anything and

everything which takes a bit of work to earn. You couldn't have tossed
up a better example of the syndrome.

Brian, it's gone and it ain't coming back, except for those folks who never have the need for a kick in the butt to jumpstart them. Luckily there'll always be some of them
to carry the rest. The 'rest' who lean on their 'rights' for everything. They seem
be unaware that life has the right to dump them on their butts at any time.

I have never, ever heard so much BULLSHIT, than what I've read today
from Hitler....errr...uhmmmm... I mean Riley....

Check this BULLSHIT out!

http://www.arrl.org/news/stories/2002/10/09/1/?nc=1

I mean, fucking Riley, says let's clean up the hobby, but this asshole
bastard won't raise a fucking finger to clean up 75 meters! Anyone who
ever listen to 3.865 in the evenings knows what I'm talking about (on
the east coast, that is...) practice what you preach! otherwise, shut
the fuck up....

signed,

A Amateur who's sick of the bullshit from the FCC's wanna be bulldog.

My aren't you articulate...

A shining example of what Amateur radio is turning to now.
Thanks for your input.

BTW do YOU talk on 75 meters the same way you spout
here on usenet?

If so, you are definitely a big part of the problem.
If not, then why act like an idiot here?

Hmmmm. Does this mean no AM on 75 meters in the evening
hours when it's "open" and the sidebanders are wailing?

For some guys I know, he'll have to pry their plate
modulators from their cold, dead fingers.

Dick and Brian, 8 year old boys will do a lot for a cloth patch. Will
the FCC give them a cloth patch for learning the code? Will the ARRL?
If they will, I'll be glad to help the boys get there - if that's
what they want to do.

Brian

Jim, Dick, I make a fair American Pale Ale (big hop head). Been brewing since 1981. My latest brew was an all grain mash - my first. Everything else has been extracts with some grain for body and color, but as soon as I get a few more dollars I'll be mashing grain forever.

From the store, I like Bass Ale and Murphy's Ale.

There are some on-line stores that sell about everything - probably even Alaska Amber.

I'll look for it.

Yellow dress at the beginning and end of "Bye Bye Birdie"...'nuff said.

>Raquel Welch

One of the funniest movies of all time - "Mother, Jugs and Speed" ("SHOW BUSINESS!!")
>
Agree all around - add to that list (in no particular order):

Heidi Klum
Carly Simon album covers
Sandra Bullock
Kim Basinger (without the politics)
Geena Davis

and at the top of the list....

Jan Smithers

But I thought we were talking about beer.

Before this degenrates into "X reasons why beer is better than..." I'll say

Mike, my son has the beginnings of a nice rock/mineral/fossil collection from a "Wolf" achievement. Using one of his minerals as a detector in a no-power crystal set for a "Bear" achievement is a killer idea. We'll have to go Galena crystal shopping. Thanks to you and Kelly.

Jim:

As it happens, I'm having my right hand operated on for Carpal Tunnel Syndrome on the anniversary of your first license arriving. I like to think that years of operating CW had something to do with my developing this condition.

Good idea, Brian. I would suggest a multiplier of the overall point score
of .5 points for each ten degrees below an average daily high temperature
of 50 deg. F. For example, you score 2,000 QSO points, and your ave.
daily high temp was 40 deg. F, you multiply your score by 1.5, giving
you an adjusted total of 3 kilopoints. An average temp of 32 deg. F. would
net you 3.8 Kpts.

You have the usual 5 business days to copyright this idea, or it's all mine.

Good point and you are right.

I have been a AMer (again) since about 1979. Still enjoy the mode. Using my boatanchors. But I have a personal policy of not operating AM at night on 75 meters. So no arguement there.

However....tune around to some of those so called 'audiophile' groups. Nuff said, eh?

The last time I did 'fieldday' in the winter is my last day doing 'fieldday'
in the winter.

It was in Germay, January/Feburary 1970s. We had our tent stakes, our
stoves, our commo gear and antenna's.

I knew I was in trouble when the plate switch broke off when I tried to turn
the mess on.

No thanks.

Subject: MAKE FAST EASY MONEY$$$$$$$$4
Date: 2002-10-03 10:11:09
From: SMOKEYMOM3

$$MAKE YOURSELF SOME MONEY$$, NO SCAM! GUARANTEED MONEY! NO JOKE!$$
Dear Internet User,

Good day, This article I've written is all about the fact where I earned an ASTOUNDING amount of money in less than a month and I've decided to share or reveal the secrets behind making big bucks in the Mail Order Business.
So all money seekers, read this carefully.

Hi, I'm 23 years old and I make more money than my parents and so can you" Turn $6.00 into $60,000...read this to find out how!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board like this one and decided to try it. A little while back, I was browsing through several newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you need to send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are millions) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!!

Let me tell you how this works and most importantly, why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

SUGGESTION: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's

legal. And, your investment is only $6.00 (Plus postage).

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue it’s success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

~~~>HERE ARE 4 EASY STEPS TO GET STARTED<~~~

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (Please make sure that the bill wouldn't be noticed in the envelope to prevent thievery). Send out US $ DOLLAR, so it would be more acceptable.

STEP 2: Next, place one paper in each of the 6 envelopes and seal them properly. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase, "PLEASE PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.

What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting for a legitimate service and you are paying for it! Like most of us, I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Mail the 6 envelopes to the following addresses below:

#1)S.R. Johnson ; 3285 Lewis Ave.
Signal Hill, CA, USA, 90807

#2)B. Hooper ; 3 Warringah Gve.
Petrie, QLD, Australia 4502

#3)Matthew Speight ; 6 Charnwood Ave.
Belfast , N. Ireland : BT15 5DH

#4)Ahmad Mujeeb ; 307-14 15 st, NW,
Charlottesville, VA, USA, 22903

#5)sean quinn ; 13865 Belvin court.
Orlando, FL, USA, 32826
~~~

#6)R.Pena ; 1962 46St. S.W.,
Naples , FL., USA, 34116

STEP 3: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 4: Copy this article. Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18, Section 1302 and 1341, US Postal and Lottery Laws or Title 18, Section 3005 in the US code, also in the code of Federal regulations, Volume 16, Sections 255 and 436, which states; "a product or service must be exchanged for money received." The simple note in the letter, "PLEASE PUT ME ON YOUR MAILING LIST", makes it legal because you are paying for exchange of a service, (adding the purchasers name to his mailing list) for a $1.00 fee.
: Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

~~~>DIRECTIONS FOR HOW TO POST TO NEWSGROUPS<~~

Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your mouse cursor at the beginning of this letter, click and drag your cursor to the bottom of this document, right click and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your mouse cursor at the top of the blank page. Right click and from the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name and postal address to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
~~~

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the "post" message button. You're done with your first one!
NOTE: Please don't SPAM or send unsolicited emails. It's completely illegal. Send emails to all the people you know or any ways that allows you to, instead of SPAMMING.(Just a reminder).

Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about a minute for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

*Now the WHY part; Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet!!! REMEMBER, PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU!!!

1799. Vanity Call Abuse and other Problems.. Riley Do something!

Hello everyone

While looking at the list of Callsign Trustees with 2 or more calls at:
http://www.ah0a.org/FCC/Clubs5.htm
I put a number of the calls in the Repeater search engine at:
http://www.artscipub.com/repeaters/showrepeaters.asp

I noticed that a number of the clubs listed in the top 10% of the list
do not have a repeater listed even though they are listed as
networked clubs, repeater groups, systems and associations.
I found that to be really strange.. Dont you?
Then I looked at some of the club names and calls
This is what I found.
1) A number of different clubs have the same prefix's.
I find that confusing as it must be hard in that area
that quite a number of groups have the same suffix calls..
2) Some of the names of the clubs just scream out "Question Me"
These clubs that are named after sports heroes, the trustee or
their qth address, or other names such as the Jammers for Jesus
or the Richard Burton ARC (both who are finally being questioned
by Riley).
3) A number of different clubs that have the same issuance date
for the callsigns.. Is that strange that the boards and members
of these clubs can all agree on their calls at the same time?
4) If some of these trustees are supposed to monitor the repeaters
and other transmissions of these clubs, it must be hell to monitor
5 different repeaters at once to police the frequencies.

Ham Radio is supposed to take care of itself.. It seems that the only times
Riley
and others have anything s after pressure has been applied by many
individuals or threats of government intervention by political officals
has been used as a last result.

I know of a few cases where Riley has questioned calls and clubs in this
matter and has taken action.. That has to be applauded.
Of course there are the clubs that have provided the correct information
of the groups existance and even though these clubs have constitutions,
membership lists, participated in contests and other social events,
and even issued nice membership certificates, these clubs were
not viewed as offical due to public misguided pressures.

Riley has alot to do to clean up this hobby and he needs our help.
Some of the things that need to be done is
1) The clean up of the repeaters and airways of Jammers and

action taken when such offenders have been identified.
(In South Florida a number of offenders have been identified, taped
claiming that they were the jammer, and have been verified
but credible folks such as offical observers, ect but nothing has been
done by the FCC. And We are not talking about Flippo.)
2) Actions taken by League Officals and other Amateurs who conduct
VEC exams, Emergency Coordinators ect, that violate laws, the amateur
code and even normal decency standards that nothing is done by the
amateur Supervisory folks (ARRL, Riley ect) until threats of
legal intervention are involved.
3) The groups on the airwaves who believe that they own their
frequency because the repeater is there or that their net happens
there daily (10-10 anyone?) who do nothing when their members
openly jam QSO's on such frequency in a malicious manner..
I have been in a number of QSO's and have listened to them also.
Then these folks have the audacity to claim that the stations in the
QSO are openly Jamming them because of being on their frequency.
4) These clubs that have to be questioned.. I have written to Riley
about a few clubs that are very suspicious due to content (some on
a personal family level) and even one that on Usenet posted the true
nature of their club.. Some of these clubs have a smearing nature to
destroy certain hams and have posted that.. even using previous calls
of that ham to ensure that.

Perhaps all of this is too much for Riley to handle?
I am not here to bash Riley but if it takes public pressure to get
things to happen, perhaps we should let Riley know of this concern
so we can get action taken before this hobby gets an even blacker eye.
Some of these actions and officals belong back on CB.

You can write Riley at rhollings@fcc.gov

Im not out to start a flame war or anything which is why I didnt name
names or clubs but you can search on groups.google.com of such
occurances of what I listed above.. One such example is
"Something Smells in West Palm Beach" about a VEC exam about 4 years ago
where a handicapped VE was intimidated by the Head VE and others in the
hopes of chasing the ham from the hobby.
Riley does a good job and is not to be bashed by this letter but this
is written with the hopes that Riley will realize what the ham community
is concerned about and will focus his efforts.

If you have any questions, email me and we can discuss.. there is no need
to get into name callings or anything else.

Varnish isn't really necessary. Paper towel tubes also work.

Yeah, but does it work?

A decent detector can be made from a single edge "white" razor blade and the graphite (lead) from a #2 or #1 pencil. Built many, never had one fail. Every few years I build one, just to keep my hand in. "Foxhole" radio from WW2, although the carbon/steel detector goes back to the very beginnings of radio.

>
>I noticed that a number of the clubs listed in the top 10% of the list
>do not have a repeater listed even though they are listed as
>networked clubs, repeater groups, systems and associations.
>I found that to be really strange.. Dont you?

Sure. But it's not against FCC rules.

There's no requirement for any holder of an (earthbound) amateur radio license to actually USE the license in any way. I know clubs whose only use of the club call is once-a-year on Field Day. The fact that a "repeater" club doesn't actually have a repeater doesn't mean they are breaking any rules.

>Then I looked at some of the club names and calls
>This is what I found.
>1) A number of different clubs have the same prefix's.
>I find that confusing as it must be hard in that area
>that quite a number of groups have the same suffix calls..

Ya lost me. Prefix or suffix?

>2) Some of the names of the clubs just scream out "Question Me"
>These clubs that are named after sports heroes, the trustee or
>their qth address, or other names such as the Jammers for Jesus
>or the Richard Burton ARC (both who are finally being questioned
>by Riley).

Some folks think such names are "cute", just as some think certain callsigns are "funny". While they don't help amateur radio in any way, they are still legal.

>3) A number of different clubs that have the same issuance date
>for the callsigns.. Is that strange that the boards and members
>of these clubs can all agree on their calls at the same time?

Nope. Perhaps the FCC processes the applications in batches.

>4) If some of these trustees are supposed to monitor the repeaters
>and other transmissions of these clubs, it must be hell to monitor
>5 different repeaters at once to police the frequencies.

What IS against the rules is getting club calls for nonexistent clubs. There are clear definitions of what makes a legitimate "club" in the eyes of the FCC. Riley has busted quite a number of clubs that couldn't prove they met the FCC definition.
>
>Ham Radio is supposed to take care of itself.. It seems that the only times
>Riley
>and others have anything s after pressure has been applied by many
>individuals or threats of government intervention by political officals
>has been used as a last result.

That's because the electorate doesn't want to pay for enforcement. FCC's role is constantly expanding, but their funding doesn't keep pace. Been that way for more than 20 years.

>I know of a few cases where Riley has questioned calls and clubs in this
>matter and has taken action.. That has to be applauded.

FCC needs credible evidence. That means documented audiotapes. Have you supplied the FCC with any tapes?

>2) Actions taken by League Officals and other Amateurs who conduct
>VEC exams, Emergency Coordinators ect, that violate laws, the amateur
>code and even normal decency standards that nothing is done by the

>I have been in a number of QSO's and have listened to them also.
>Then these folks have the audacity to claim that the stations in the
>QSO are openly Jamming them because of being on their frequency.

A coordinated repeater has precedence over an uncoordinated one, or simplex. That's a basic rule, good amateur practice,and just plain common sense.

Moving away from a scheduled net frequency at net time is good amateur practice, and common courtesy.

>4) These clubs that have to be questioned.. I have written to Riley
>about a few clubs that are very suspicious due to content (some on

>I am not here to bash Riley but if it takes public pressure to get
>things to happen, perhaps we should let Riley know of this concern
>so we can get action taken before this hobby gets an even blacker eye.

Sure. But the evidence has to be of the kind that FCC can use.

Also, there's an order of priority to all this. Suspected terrorist/criminal activity has to be FCC's main focus. In ham radio enforcement, phony club calls have to take a back seat to things like on-air violations and VEC irregularities. That does not mean any violations are overlooked, just that they aren't all on the same level.

>Some of these actions and officals belong back on CB.

They belong off the air entirely.

> personal policy of not operating AM at night on 75
> meters. So no argument there.

> However....tune around to some of those so called
> 'audiophile' groups. Nuff said, eh?

It struck me, after I posted my question, that the
issue has some significant dimensions not addressed
in the blanket "not transmitting a 6-kHz bandwidth signal".
pronouncement.

A substantial amount of DSB-AM operation is in the form
of nets and roundtables. These things draw in a
significant number of participants. The most prominent
example for me out here in Arizona is the West Coast AMI
Net at 3870 on Wednesday nights. There are typically
20 - 30 check-ins, each waiting patiently for 2 - 3
minutes of air time. Even though this operation occupies
6 kHz of bandwidth, the frequency utilization quotient
(no. of stations / bandwidth occupied) is much higher
than a couple of 3-kHz SSB stations communicating one-
on-one. I think this should be a consideration whenever
value judgments about transmitted bandwidth become an
issue.

Ditto Korea winter 88/89, 2ID, "Winter Haze." Damned R292 has to go
-above- the cammo netting. I ended up slashing the cammo netting to
get my frozen hand out. The rice paddy froze over and our tent flaps,
power and coax cables, and truck tires froze in the mud. Five ton
wouldn't move til we busted it our with sledge hammers. Hey, lets
"jump."

I've developed a very fond liking to the stuff...especially
on tap in a restaurant. Happily, many of the pub style
places here in NJ carry Guiness on tap.

I've also tried the Guiness in the can...not bad at all.
The first time I had one in a can (I poured it into a
glass which is the only way it should be done) I heard
this clunking sound in the can when I turned it over.
Seems the Guiness folks put a small (about one inch)
plastic ball in each can to improve the way it pours.

Cheers (now that IS a most appropriate signoff for this thread :-)

First and foremost, Hollingsworth is a federal bureaucrat.
As with any bureaucrat, priority one is to protect his job,
at any cost. Everything, and I do mean Everything, is second
to that top priority. He will do Nothing which may endanger
his first priority. Why do you think he's left K1MAN alone?
MAN has the resources to legally shake the FCC to its
foundation AND put Hollingsworth's job is grave danger. MAN's
case would be so high profile and create so much Congressional
heat that the FCC bosses would send Hollingsworth packing in
a heartbeat.

So? Isn't that the idea behind FD---to learn the requirements for operating under emergency conditions? That's the issue being discussed. I operate FD in Florida at temperatures in the tent running around 100 F or greater (measured with thermometer) with suffocating humidity. I've learned about what it is like to walk around in a perpetual cloud of mosquitoes. Hot food is no fun in summer. How much I really need water. What are minimal requirements for a station in order to communicate effectively. How long can I really operate on that car battery at 50 watts. How fast can I set-up and break-down a station. Pre-planning to conserve energy and not turn into a sweat ball. The importance of site location...

I guess it really boils down to, in case of an emergency, how quickly can I respond with an effective station and take care of myself and others. The only way I think is by training. I've done that in Florida summer for as long as I can recall but I have no idea what is required of me in winter.

The FD experience to a large part has truly made me more aware of what is required of me to be prepared and self-reliant. Hell, our government talks about terrorism but they have yet to provide us with the details on how we can take care of ourselves. No, they rather us wait for the BIG GREEN ARMY TRUCK that hands out MRE's and bottle water. Come to think of it, remember back in the 60's when we saw those booklets scattered around public places providing details on Civil Defense; how to build shelters, store food and water---I remember them even though I was a youngster. Is CD old hat now? Besides, whatever happened to CD anyhow. All I see is the old 1960's CD shelter supplies being auctioned off on eBay.

[Newsgroup distribution changed for this reply - 2 of 5 groups don't exist, and a third was inappropriate.]

On Fri, 11 Oct 2002, James A Keller wrote:
>While looking at the list of Callsign Trustees with 2 or more calls at:
>http://www.ah0a.org/FCC/Clubs5.htm
>I put a number of the calls in the Repeater search engine at:
>http://www.artscipub.com/repeaters/showrepeaters.asp

Although for the specific instances you mention below the following isn't true, did you also check the "ampr.org" domain and packet BBS lists for these club calls? I am aware of a couple of club holders which don't have [voice] repeaters but are digital/packet organizations and therefore use their club calls on packet stations... Also in my area, the ATV'ers may have a club call or two for ATV operations which may not be in that database you searched.

However, in contrast to your callsign grabbing argument, some of the grabbers have used these calls on operational machines (e.g. W6NUT), so merely checking against a repeater database isn't conclusive either.

>I noticed that a number of the clubs listed in the top 10% of the list
>do not have a repeater listed even though they are listed as
>networked clubs, repeater groups, systems and associations.
>I found that to be really strange.. Dont you?

...There's no law against being an asshole!

>3) A number of different clubs that have the same issuance date
>for the callsigns.. Is that strange that the boards and members
>of these clubs can all agree on their calls at the same time?

Did you look back for the original licenses for these clubs? Or are you merely looking at their current vanity-calls? How many of the latter correspond to the

opening of each vanity-call gate? There are reasons why this may be so....

>4) If some of these trustees are supposed to monitor the repeaters
>and other transmissions of these clubs, it must be hell to monitor
>5 different repeaters at once to police the frequencies.

Only if several (3+) are active at the same time. It's quite easy to monitor several repeaters while they're idle. Additionally, who said that the callsign trustee must be the one monitoring - "control operators" may exist....

If he put K1MAN off the air he'd also have to do the same for W1AW. End of story. That doesn't mean K1MAN won't catch some flak for his alleged rule violations.

How so? 30-50 MHz are/were allocated to land mobile, using channelized FM sets.
Lots of the users of those freqs hear/d dx signals when the muf gets high
enough. But those services remain land-mobile.

>>>It's too late for anyone to put the genie back in the bottle, I think.

Not at all! The requirement was subject to revision at every world radio
conference since 1927. And it has been revised, from being a blanket
requirement for all hams, to being required for licenses below a certain
frequency (first 1000 MHz, then 144 MHz, now 30 MHz). Soon it will be 0 Hz.

I've been a ham for 35 years (October 12, 1967!) and from what I've seen it's only been an issue since the mid-80s. Yes, there have been a few who were against code testing, but it hasn't been much of an issue until recently.

More important, when the subject has come up in the past, the overwhelming response has been to keep code testing at the then-current levels. Support for code testing was high among all groups that cared to express an opinion. That opinion distribution has changed in recent years, as evidenced by comments to the FCC.

The Land Mobile guys stay on fixed channels and have no interest in
chasing DX - two things that don't apply to hobby users as a group

That's a matter of definition. Given the reductions in the cutoff
frequency at the international level started in 1939, and that the FCC
floated a communicator licence for above 220 back in the 70s, I'd say you
were wrong about that, although it may have taken longer to penetrate
your conciousness!

This is where I have to tell you I'm not from the US. The code tests here are easier than in most countries, and I'm not talking about the code speed. My point is that US opinion has tolerated code testing to a greater extent because of the Mickey Mouse nature of the tests (no offence to Disney!). A lot more people would have got a lot more upset if they had been faced with the code tests as they are in some other countries. I was never able to pass a code test in the UK when I lived there. I would at that time have had to read 96% correct in random groups at 12 wpm, otherwise no HF. I still can't even do that now, or even the day after I legitimately passed the 20 wpm test over here. Mind you, the test over there is now 5 wpm plain language, but I don't think the percentage copy is any lower.

You only need about 70% right to get the 7 questions out of 10 right over here. Most of the world don't know that about the US, they actually have to get most of the characters right in their code tests, and they probably think you do too. I did until I actually came to live here. This is not bashing the US, I agree with anything that makes it easier, including abolishing it! Of course, I expect that in some of the smaller countries the code tests are even easier than they are here.

'S OK, Alun. The way Larry is, even if you tried CW for [you
fill-in-the-blank] amount of time, a) it wouldn't have been long enough if
you still didn't enjoy it, and b) even if he was willing to concede the
length of time, if you still didn't like it there'd be nothing but
name-calling and other innuendoes thrown your way.

Message-ID: <uqf0oc1d244g02@corp.supernews.com>
Source record: 53589

Just got an e-mail with an attachment from someone I didn't know (looked like a good return e-mail addy). I pulled the internet connection and saved the attachment to my documents. Exited Outlook Express and opened my documents - yep, up popped the virus checker and it was the bearbug virus. I deleted the attachment from my documents, returned to Outlook Express and deleted the e-mail. I then ran an entire system scan and some 11,000 files are officially virus-free. One thing I recently learned is one does not simply check for updates once a week or trust the anti-virus checker to check automatically (unless the pc is on line 24/7). I update daily and we all should.

I wonder what happened. I posted my original rant based on
the link to the article on the ARRL site.

http://www.arrl.org/news/stories/2002/10/09/1/?nc=1

Now, this "sanitized" version just appeared in my e-mail 'IN'
basket as part of The ARRL Letter, Vol 21, No 40 (excerpted):

---------- begin excerpt ----------

==>"GOOD AMATEUR PRACTICE" MEANS NEVER HAVING TO SAY YOU'RE SORRY

FCC Special Counsel Riley Hollingsworth has endorsed a list of several
points that he feels help to define the concept of "good amateur
practice." Section 97.101(a) of the Amateur Radio Service rules refers to
"good engineering and good amateur practice"--considered to refer to
maintaining the highest standards of engineering and on-the-air
comportment. But the rule lacks specifics.

"Good amateur practice is a hard thing to define," Hollingsworth conceded.
"I'd have to say it's operating with the realization that frequencies are
shared, that there's going to be occasional interference and that's no
reason to become hateful and paranoid."

Hollingsworth says amateurs have to realize that more people than ever are
listening in, especially since September 11, 2001, and that amateurs
always need to remember that "our rights end where another person's
begin."

A Michigan Amateur Radio club has been credited with distributing a list
of "Riley-isms" culled from Hollingsworth's various talks at conventions
and hamfests and club meetings around the US. Hollingsworth--who verified
that he had been cited accurately--says his various comments represent an
effort to flesh out what "good amateur practice" consists of for
considerate the Amateur Radio operator. According to Hollingsworth, good
amateur practice means:

* giving a little ground--even if you have a right not to--in order to
help preserve Amateur Radio and not cause it to get a bad name or hasten
the day when it becomes obsolete.

* respecting band plans, because they make it possible for every mode to have a chance.

* being aware that we all love Amateur Radio, and there's no need to damage or disgrace it just to save face.

* keeping personal conflicts off the air. Settle your arguments on the telephone, the Internet or in person. Just keep them off the air.

* cutting a net or a contester a break, even if you don't have to and even if you have no interest whatsoever in nets or contesting.

* realizing that every right carries responsibilities, and just because you may have a right to do certain things doesn't mean it's right to do them in every circumstance.

* you don't "own" or get preference to use any frequency.

* not operating so that whoever hears you becomes sorry they ever got into (or tuned in on) Amateur Radio in the first place.

Hollingsworth notes that the list "doesn't touch on a lot of other technical issues, such as using 1500 W when your signal report received is 40 over 9." Good amateur practice, he said, "just means a lot of things that can't always be quantified."--thanks to Riley Hollingsworth

---------- end excerpt ----------

Note the omission of any explicit reference to occupied bandwidths or modes, subsuming them, I suppose, under the heading of "technical issues". Also noted is the mini-homily about 'respecting band plans'. (Where is that AM window on 80 anyway?)

So, I apologize if I cried "WOLF" at the '6 kHz' entry in the original text. But "the price of liberty is eternal vigilance".

73,

I posted (yeah, yeah -- following up on my own posts):

> I wonder what happened. I posted my original rant based on
> the link to the article on the ARRL site.
>
> http://www.arrl.org/news/stories/2002/10/09/1/?nc=1

Just to make sure I'm not totally around the bend, here's
the excerpt from the webpage article:

------------ begin excerpt ----------------------------

A Michigan Amateur Radio club has been credited with
distributing a list of "Riley-isms" culled from
Hollingsworth's various talks at conventions and hamfests
and club meetings around the US. Hollingsworth--who
verified that he had been cited accurately--says his various
comments represent an effort to flesh out what "good amateur
practice" consists of for considerate the Amateur Radio operator.

According to Hollingsworth, good amateur practice means:

giving a little ground--even if you have a right not to--in
order to help preserve Amateur Radio and not cause it to get
a bad name or hasten the day when it becomes obsolete.

respecting band plans, because they make it possible for
every mode to have a chance.

not transmitting a 6-kHz bandwidth signal when there are
lots of people on the band.

not acting like an idiot just because you were stepped on.

being aware that we all love Amateur Radio, and there's
no need to damage or disgrace it just to save face.

keeping personal conflicts off the air. Settle your
arguments on the telephone, the Internet or in person.
Just keep them off the air.

cutting a net or a contester a break, even if you don't
have to and even if you have no interest whatsoever
in nets or contesting.

operating so that if a neighbor, niece or nephew or
news reporter hears you, that person will be impressed
with Amateur Radio.

realizing that every right carries responsibilities,
and just because you may have a right to do certain
things doesn't mean it's right to do them in every
circumstance.

you don't "own" or get preference to use any frequency
even though you've been on the same spot every morning
for years shooting the breeze with Harry.

not operating so that whoever hears you becomes sorry
they ever got into Amateur Radio in the first place.

Hollingsworth notes that the list "doesn't touch on a
lot of other technical issues, such as using 1500 W
when your signal report received is 40 over 9." Good
amateur practice, he said, "just means a lot of things
that can't always be quantified."--thanks to Riley Hollingsworth

---------- end excerpt ----------

Not hallucinating (yet).

Gotta be Allied Radio. Later became Allied-Radio Shack. Then Tandy Leather bought it all up and the rest is Rat Shack history. At that time was the Chicago equalivent of Radio Row. Sent them many an order, also some to Burstein-Applebee in Kansas City, who also had a walk-in store in Springfield MO. into the late 60's. All gone now, more's the loss. Layfayette was another similiar operation, I think more an east coast operation.

BTW I spent the year 1961 stationed on a Nike base over in the Jersey flats a few miles east of Philly and spent many an off duty hour crusing Radio Row. What a resource!

My school bus later went past his place, and I noticed he had some hefty wire antenna out with a number of 8 foot florescent tube lamps tied to the wire. Must have really lit up the neighborhood at night when he modulated that KW. That was my first direct exposure to ham radio, tho I was listening to AM hams on an old BC/SW set my Dad gave me that was non-working and somehow I fixed. It had a grid cap that was broke off the mixer tube, I thought that had to be where it belonged and I was right. First success in radio!

>
>The Land Mobile guys stay on fixed channels and have no interest in
>chasing DX - two things that don't apply to hobby users as a group

cb is on fixed channels, and was not meant as a 'hobby' service at all. It was
intended as a lowcost alternative to the VHF/UHF FM land-mobile services.

Example: Back when, a big taxicab company like Yellow Cab could afford to equip
its fleet with VHF FM sets. The license applications, fees and related costs
could be amortized over a lot of vehicles. But a small cab operation couldn't
afford the high startup costs. Competitive advantage: big company. So FCC
created cb so that the little companies could have land mobile radio without
the high startup cost.

I would venture to guess that the number of 'hobby type' cb users is far less
today than it was 25-35 years ago.

>likely to me, actually

It would have been legislated out of existence. Without formal recognition as a service, protected by treaties and such, the bands assigned to amateurs would have been quickly and easily reassigned to other services. The relatively few hams of the day would have been no match for the constant attacks by other services.

But with amateur radio formally recognized as a valid radio service, with exclusive bands allocated, elimination was made much more difficult.

Take a look at the battles fought at the radio conferences of the '20s and it's clear that the decisions made in 1927 were necessary for amateur radio to survive.

>were wrong about that, although it may have taken longer to penetrate
>your conciousness!

Not at all. The reductions were done for two reasons:

1) Not much routine Morse activity on VHF/UHF
2) Encouragement to use VHF/UHF for experimentation.

>> More important, when the subject has come up in the past, the
>> overwhelming response has been to keep code testing at the then-current
>> levels. Support for code testing was high among all groups that cared

>speed.

Same is true of the writtens.

>My point is that US opinion has tolerated code testing to a greater
>extent because of the Mickey Mouse nature of the tests (no offence to
>Disney!).

Been outpaced by the UK, now.

I took the 13 and 20 wpm Morse tests in front of an FCC examiner. Had to
produce at least 1 solid minute of legible copy out of 5. No going back and
correcting errors, either. Also had to send Morse to the examiner's
satisfaction - with a straight key.

>A lot more people would have got a lot more upset if they had
>been faced with the code tests as they are in some other countries. I was
>never able to pass a code test in the UK when I lived there. I would at

The UK has their new "Foundation" license. Its "code test" is hardly a valid
indication of Morse knowledge.
>

>bashing the US, I agree with anything that makes it easier, including
>abolishing it! Of course, I expect that in some of the smaller countries
>the code tests are even easier than they are here.

What you are really arguing is that the standards are set at too high a level, rather than that the Morse test needs to go away. Same argument holds true for the writtens.

Yer makin' me thirsty, Bill.

I was introduced to the stuff by a coworker who is a pipe major. "Drink your
beer before it gets cold" is one of his. Also the following exchange:

"That's not MY beer"

"How do you know?"

"It's empty"

>I've also tried the Guiness in the can...not bad at all.

Also available bottled. Don't know which is better. Need to run some
experiments.

>original text. But "the price of liberty is eternal vigilance".

I don't think you cried wolf. The 6 kHz quote was there at first - I saw it.

Funny thing is, Riley's an AMer, too.

Your point about AM roundtables is quite valid. 10 hams on a 6 kHz wide channle works out to 600 Hz/ham. 3 hams on a 2.1 kHz channel works out to 700 Hz/ham. Etc.

Of course one has to ask - why couldn't the AMstyle roundtable, complete with old buzzard transmissions, be carried out on SSB?

Well then the answer is that it is fun and challanging to operate, maintain, build AM equipment.

It harkens to the days when the 'average' ham could actually repair, modify, design, operate his equipment.

And believe it or not AM just plain sounds good. Especially if its received on a real tube type AM receiver.

Try it sometime.

Oh and one more point. Why is everyone complaining about AM being 6 kc wide? What does that crystal filter do in YOUR receiver?

Dan/W4NTI

Nah, it wasn't an electronics emporium as such, they only had a few
pages out of several hunderd which offered xtal set parts, the rest of
their wares were not related to radio or electronics. They didn't have
any tube-type "stuff" at all for instance. This outfit had to go back
at least to the 30s maybe the 20s. I think it died in the '55-'60
timeframe. Damn this half-heimers . . !

> also
> some to Burstein-Applebee in Kansas City, who also had a walk-in store
> in Springfield MO. into the late 60's.

Pretty common in urban areas, we had several into the 60s. We had a
good local version right here in the neighborhood, Kass Electronics.
Catered to the industrial and TV repair markets plus ya could hoof out
with an S-Line or a spool of Saxton open-wire feedline or a pair of
3-500z's. Lotsa parts. Poof, all gone. But I do have an HRO about 45
minutes down I-95 in beautiful downtown tax-free New Castle Delaware.
Wanna $3,000 radio? Fine. Parts? Fuhgeddit.

> All gone now, more's the loss.
> Layfayette was another similiar operation, I think more an east coast
> operation.

I think they were based on Long Island. Lafeyette was good right up
into the late 70s, made Rat Slack look sick even then. I glomed a
lotta nice parts like vernier dial drives when they marked everything
down to dump inventory to go outta biz, still have some of it NIB.
Rat Slack gets worse by the month.

>
> BTW I spent the year 1961 stationed on a Nike base over in the Jersey

Thankew for protecting our buns Richard. Is that some gawd-awful wet
sandy boonies right in the middle of the NE corridor or what?! I spent
a lotta time as a civilian Naval at NAS Lakehurst. UGLY.

and spent many an off duty hour crusing
> Radio Row. What a resource!

Unbelievable is more like it. I still have heaps of goodies I picked
up along Arch Street as a kid in the very early '50s. Huge asset to
area kids struggling to get on the air when the FCC popped the Novice
ticket. My Radio Row 80m ARC-5 TX got me up and running for five
bucks. The Big Guns didn't miss their share, either. Lotta multi-Kw
treasures could be had for zip. One of the legendary gods of the Big
Guns Gerry Mathis w3bes later w3gm ran one of those stores and always
took the time to guide kids like myself into the hobby.

Standard "tuning indicator". I didn't own a single meter for anything,
couldn't afford any such things so I taped a short flourescent tube
onto the end-fed 150 foot wire just outside my bedroom window. An NE-2
did the job too. I simply juggled the plate tuning cap & tapped up &
down the plate coil for max lamp brightness. Got "bit" a few times but
what the hell they only took a week to heal . .

Good show! My first exposure to real radio similar, a big living room
BC/SW RX owned by a couple old maid aunts which could tune 80 & 40.
The bug bit hard, especially the thumps of CW below the phone bands. I
dug up a chart of the code and tried to decipher the thumps and
actually managed to do it here and there and actually got better at it
as time went on. That really done it.

He'd be clueless. Last I heard he's running balls-to-the-wall after DX
with that archaic narrowband ssb thingey he dissed in volumes. After
ranting endlessly about allowing Spread Rectum to the band edges of
20m.

This has to be the most tortured logic to make a (faulty) conclusion that I have ever seen! 6 kHz is being utilized at any given time by only a single AM transmitter, no matter how many people are waiting in line to transmit. If the same information can be transmitted in a 2.1 kHz SSB slot, then SSB enjoys a "frequency utilization quotient" advantage of 2.85:1 over AM.

23 channels is not really fixed channel in the sense that I meant it. A
land mobile station has to stay on it's assigned channel.

That was the US argument at the time, but I don't think including a Morse
test was necessary to settle the issue. We'll never know, will we?

For the M3, yes. But the point is that US hams have been led to think code test are easy to pass because theirs are easy.

I would have had to make almost solid copy (see below) for the whole test, not a mere minute, except that I couldn't manage it! And I would have had to send for the whole period with no uncorrected errors atall. That is tougher than the tests you passed, albeit at 12 wpm, and I never reached the test standard, and still haven't. Maybe with a little practice I might have been able to copy a mere 60 seconds? Who knows?

When the no-code licence came out over here. I took the tests to get one straight away, and refused to take the 5 wpm test, only because I thought I had no hope of passing. That was my mistake, I simply failed to understand how much easier it was than a UK test. Within about a year I was an Extra.

Incidentally I have worked N3IYI, who was in the very first group of people to get a no-code licence (I think N3IYF was in the same test with him, and was officially the first), and he told me that they took their tests before the announcement.

Actually that's not my argument atall. What I'm saying is that the US code tests have been so dumbed down for so long now that you don't understand over here why other countries are trying to do away with them. Rather than dumb them down, isn't it more honest to ditch them?

That said, you are quite right that the UK is now playing your game, and going even further, with it's 'Morse asessment' for the Foundation, aka M3 licence. At least the RA has said outright that it plans to dump code testing as soon as the ITU says it can, and regards this as an interim plan only. The FCC apparently adopted easier tests as a long term solution.

Of course, the FCC is in no position to issue an edict as soon as the ITU rules. Your public comment process means that code testing will probably be abolished here in about 2005, with NPRMs and suchlike to contend with to delay the process. Oddly enough, I would advise people to take the 5 wpm test. Passing it doesn't mean that they can read code, anyway!

It's a logical deduction that without service status, the ARS would not have
lasted long after 1927.

You asked in another post why you had to learn Morse in order to work HF phone.
The answer is "for the same reason hams have had to learn all sorts of things
for the writtens that had nothing to do with what they wanted to do".
For example, I had to learn:

- VHF/UHF techniques in order to work HF
- SSB, FM, and other modes in order to work CW
- all sorts of theory in order to use manufactured equipment.

Etc.

There's no reason other countries could not have adopted US testing standards.
Failure to do so is not due to US hams, nor due to S25.5.

Why? How many hams, in the US or UK, actually build their own equipment from scratch, or kits? (I do, btw).

Why should a new ham have to learn, say, the block diagram for a PLL-type synthesizer in order to use a manufactured rig? Particularly when that rig has a DDS-type LO?
>

It's the logical conclusion that results from your argument.

>What I'm saying is that the US code
>tests have been so dumbed down for so long now that you don't understand
>over here why other countries are trying to do away with them.

The toughest code test requirement that the USA has ever had for a ham license is the "1 minute of 5 & send to the examiner" test. Why didn't the UK adopt a more reasonable testing standard?

> Rather than
>dumb them down, isn't it more honest to ditch them?

Nope. The reasonable thing is to have a reasonable test standard.
>
>That said, you are quite right that the UK is now playing your game, and
>going even further, with it's 'Morse asessment' for the Foundation, aka M3

Not really. The FCC actually made the tests tougher in 1968, then began
relaxing them in 1983
>
>Of course, the FCC is in no position to issue an edict as soon as the ITU
>rules. Your public comment process means that code testing will probably
>be abolished here in about 2005, with NPRMs and suchlike to contend with
>to delay the process.

I disagree 100%. Here's why:

FCC specifically asked for comments on the code tests in 1990 (for VHF/UHF) and
again in 1998 (for all ham licenses). In both cases, FCC found no compelling
reason to continue code testing for the licenses under discussion.

FCC specifically said in its R&O for the 2000 restructure that it saw "no
regulatory purpose" in code tests for any class of ham license EXCEPT meeting
S25.5. They were very clear that the treaty was the one and only reason that
the 5 wpm test was retained. In FCC's opinion, 5 wpm was the minimum required
to meet the intent of S25.5, so it had to be retained.

In addition, by granting medical waivers back in 1990, FCC showed that it did
not consider code tests above 5 wpm to be essential.

I am convinced that as soon as S25.5 is removed, and the treaty ratified by the
USA, FCC will simply "waive" Element 1. They will cite their previous
pronouncements on the subject and be done with it. No NPRM, no comments, just
"Element 1 is waived for all license classes".

Just watch.

>Oddly enough, I would advise people to take the 5
>wpm test. Passing it doesn't mean that they can read code, anyway!

Same here. Why wait?

But in fact I think that the whole idea of 5 wpm has done more harm than good.
Too many hams picked up bad habits while learning 5 wpm. Said habits had to be
unlearned to go faster. Koch and Farnsworth had this all figured out decades
ago, but the message was lost on the FCC.

That's every day for the past 35 years here at N2EY.
>
>And believe it or not AM just plain sounds good.

Agreed.

> Especially if its received
>on a real tube type AM receiver.

Yup.
>
>Try it sometime.

Been there done that. Back a few years I had an NC-173/Viking 2/122 VFO setup
for AM. Got the gear for peanuts back when nobody wanted BA stuff. Of course it
all needed work to get it on the air.

Sold it all before I moved to this new QTH - for a LOT more than I had in it.
Less room in the shack, something had to go. (sniff).

One of these days I will build up an AM rig to go with my $2 BC-342-N.
>
>Oh and one more point. Why is everyone complaining about AM being 6 kc
>wide? What does that crystal filter do in YOUR receiver?

??

What's your point?

An AM signal that has response up to 3000 cycles will take up 6 kc of the band.
Filtering at the receive end won't change that fact.

This SHOULD be what field day is about. My field day was different. Its really one big contesting event.

You set up stations at the beginning of the event, you learn a little (not alot) about emergency preparedness, (such as emergency power generators) doing this.
Station location was under a parking garage (very easy to protect against rain). Station setup time was not critical. In fact, many took the previous day off to have an extra day to setup. Food was provided, also restaurants nearby. Noone operated with a car battery, therefore I did not learn how.

After everything is all set up, the rest of the event is a bunch of contests. I did not stay for the taking down of the equipment. I would like to learn more, but field day did not give the opportunity to do so.

>You set up stations at the beginning of the event, you learn a little (not
>alot) about emergency preparedness, (such as emergency power generators)
>doing
>this.

You get out of it that which you put into it.

>Station location was under a parking garage (very easy to protect against
>rain). Station setup time was not critical. In fact, many took the previous
>day
>off to have an extra day to setup.

Learn to do it right the first time and you won't have to make the same
mistakes the next time.

>Food was provided, also restaurants nearby.

Many a disaster situation I ahve been in was assisted by local
restauraunts.

>Noone operated with a car battery, therefore I did not learn how.

Then why didn't YOU do it? There are countelss texts on the matter
available to anyone with and 8th grade education.

>After everything is all set up, the rest of the event is a bunch of contests.

The point is operating under pressure. If one reads your post thoroughly,
it appears that you weren't up to it.

>I did not stay for the taking down of the equipment.

This is not surprising.Most people who whine the most about it are the
ones who weren't around for most of it.

>I would like to learn more,
>but field day did not give the opportunity to do so.

It gave you every opportunity to do so, YOU just chose to not exploit
those opportunities.

NOTHING in Amateur Radio promises to take you by the hand and guide you.
I am making a big assumption here that you are over 21, therefore I ASSUME you
are an adult. So quit whining about what you didn't get, and go out and do it

for yourself.

If, in the planning for the next Field day, no one in your club proposes or supports a battery station, DO IT YOURSELF. QST is ripe with D-I-Y battery projects, as is CQ, 73, etc.And I dare say a well equipped public library has textbooks on battery power techniques. Look under survivalism, battry, alternative power,, etc etc etc.

Jim1, Jim2, it's called "Good Amateur Practice." You don't need a
specific rule.

> There's no requirement for any holder of an (earthbound) amateur radio license
> to actually USE the license in any way. I know clubs whose only use of the club
> call is once-a-year on Field Day. The fact that a "repeater" club doesn't

Riley is a single government employee. He's not compelled to pursue
every possible violation of "Good Amateur Practice" that exists.

> >Ham Radio is supposed to take care of itself.. It seems that the only times

Then don't expand their role! Congress needs to attach a funding
voucher with each new law they pass. If agencies such as the FCC take
it upon themselves to expand their roles without direction from
congress, then they should be spanked (Kelley term). As far as I'm
concerned, the FCC has had a directive to enforce part 97 since they
have been an agency. It's part of the legacy.

> That's a basic rule, good amateur practice,and just plain common sense.

There are too many unused repeaters. And there are too many
frequencies claiming a working repeater where none exists.

> Moving away from a scheduled net frequency at net time is good amateur
> practice, and common courtesy.

And not grabbing every repeater pair whether you have a repeater or
not is not good amateur practice. Putting a repeater on HF to
legitimize "owning" a frequency is not good amateur practice.

> >4) These clubs that have to be questioned.. I have written to Riley
> >about a few clubs that are very suspicious due to content (some on

> >of that ham to ensure that.
> >
> >Perhaps all of this is too much for Riley to handle?

Jim1, Riley is only one man. But he needs to select one example from
all the kinds of violations that exist, so that others are warned that
they are abusing the system even though a specific rule is not
expressly violated. I suggest he start with the ARRL and W5YI on the
matter of Farnsworth exams in place of Morse exams actually specified
in the Part 97.

> >I am not here to bash Riley but if it takes public pressure to get

My first mentor in communications regulatory engineering (a non-ham
but a great person whom I will always respect) used to say "don't
use a multi-channel system where a single channel system will do,
don't use a wideband system where a narrowband system will do, don't
use radio where wire will do".

Good advice which translates well into "Good Amateur Practice".

You are of course, welcome to set up your station in as primitive
conditions as you like.

> Station location was under a parking garage (very easy to protect against
> rain).

Let's say there is some kind of real disaster. If a parking garage is
available, would you not use that as opposed to setting up in the open
or in say the rain?

> Station setup time was not critical. In fact, many took the previous day
> off to have an extra day to setup.

Here you have a point I've been told that at one time the setup had to be
done during field day itself. In any event, if that is what you are into
go for it.

> Food was provided, also restaurants nearby.

Your point? Our club has a barbeque, hosted by one of the members. We all
eat very well. I suppose maybe the club members should forage in the
woods? 8^)

> Noone operated with a car battery, therefore I did not learn how.

With all respect, you really do not know how to hook up a rig to a car
battery? What level license class do you hold?

> After everything is all set up, the rest of the event is a bunch of contests. I
> did not stay for the taking down of the equipment. I would like to learn more,
> but field day did not give the opportunity to do so.

Yup, the contesting part is there as a carrot so to speak. What other
format of getting on the air would you suggest? Just make a contact and
then tearing the station down?

You can tell a lot about your setup under contest conditions. Here is a
for instance: For our club's GOTA station, we had a vertical antenna
with elevated radials this year. Turns out it worked very well. But only
at a distance. IIRC, we didn't make one contact within our state. Is a
good antenna? Yup, for DX. IS it something we'll use for next field day?
Probably not, as we'll need an antenna with more localized coverage.

Lesson learned. You also hone your ability to pull out weak stations during FD. Lot's of these stations have not-so-good antennas and not much power. They're pretty hard to copy.

No such thing exists. Ever try raising a control op? A trustee?
Those are figment definitions in Part 97. You could make a career of
not being answered on coordinated repeaters. Shut them all down. Let
spirited no-coders make some use of the bands.

This whole situation really annoys me.

Civil Defence=FEMA=Homeland Security???

My Gun = Home Security
Everyone's Guns = Homeland Security

We don't need some stinking color coded "threat condition" chart. The
only color chart I need is, "...violet gives willingly."

What has the office of homeland security done for me lately except
raise my taxes??? Let the FEMA, the FBI, and the CIA do their damned
jobs. Since all three let us down a year ago, fire the directors of
all three and replace them with some other incompetant bureaucrats
that will have to be fired in another year. Instead, we'll have to
fire all of them AND Tom Ridge. That's 4. Then we'll make another
fed agency and that'll be 5.

I also fail to see the logic that a tube radio receives am signals better than a solid state radio (or am I reading something that wasn't said). Years ago, with that 455 KHz (or Kc) IF, if you didn't have some kind of mechanical filter or crystal filter, you would likely enjoy whatever fidelity was in the AM signal (since you would likely be at least 6 KHz wide in receive). There are solid state radios that cover from reasonably narrow bandwidths (under 500 Hz) to fairly wide bandwidths (10 KHz am, nbfm, wbfm, etc). One would hasten to point out, of course, that the built-in or matching speakers of yesteryear were usually considerably larger than many of the tiny, tinny speakers of today. This would, of course, make the fidelity much better on the old radios. However, put into a decent external speaker, I'd be surprised if the fidelity of the old radios was any better than today's set (assuming, of course, equivalent bandwidth). I'm also moderately surprised with the bandwidth arguements going on that the CW crowd hasn't jumped in yet. ;)

>> pace. Been that way for more than 20 years.

>Then don't expand their role! Congress needs to attach a funding
>voucher with each new law they pass.

When The Congress passed the Cable Act in '94 with a directive to completely rewrite the cable rules and provide for regulatory (not engineering) enforcement by 1996, the then-Chairman Reed Hundt went to The Congress and requested authority to invrease the Commission's staff by over 300 slors to meet those deadlines. The Congress' reply was that (a) they were not going to put off the deadline and (b) the Commission would have to do it with the existing number of slots that it has.

Hundt looked around and saw the field enforcememt function as one that (a) he didn't understand and (b) was about the right size for the "downsizing". As a result he instituted the Early Retirement Exodus of 1995 (which I took advantage of for personal reasons) and the combining of field offices and remote-controlling the monitoring stations a year later with the concomitant separation of the monitoring techs, most of whom were at retirement age anyhow.

He got his 300+ open slots which he used for Cable Bureau attorneys and rule writers. The Cogress couldn't care less where he got them from as long as the Civil Service Personnel Rules were followed.

>If agencies such as the FCC take
>it upon themselves to expand their roles without direction from
>congress, then they should be spanked (Kelley term).

The general mandates of the Communications Act are broad enough to cover pretty much anything that the agency wants to (or does not want to) do.

>As far as I'm
>concerned, the FCC has had a directive to enforce part 97 since they
>have been an agency.

"As resources permit."

>It's part of the legacy.

In the good old days, the Engineers in Charge of the Field Offices and Monitoring Stations, as well as a significant number of Washington chiefs (not Commissioners, though), were active hams and were looked up to for leadership.

Sadly, that is not true today. Riley is a throwback to those times.

The Congress, as well as the top brass of the agency, neither knows nor cares for "the legacy", not only in ham radio but in many fields of the agency's responsibilities.

I'll bet the more experienced people will be willing to help out if approached properly. I would wager that I have received more practical knowledge setting up and tearing down for field day, setting up and operating in contests, and even cleaning up the club shack during cleanup day than I ever got in a classroom. You talk to people, listen well, and don't ever, ever act as though they are obligated to give you an answer. And of course the side benefit is you end up with new friends!

Too many people think that the role of the respectful student is some kind of weakness these days, I guess! 8^)

This is true..... most clubs/groups have the time to plan where they are going to set up for Field Day and the cold hard reality is that we may be asked to set up in less than perfect locations, say for instance like a grocery store parking lot. More clubs/groups should try in locations that may be "less than perfect" if they wanna see how prepared they really are.

It has everything to do with vacuum-tube mojo and cannot
be apprehended through logic, but rather only
psychic-acoustically. ;-)

> ..... One would hasten to point out, of course, that

> if the fidelity of the old radios was any better
> than today's set (assuming, of course, equivalent bandwidth).

Yeah, bandwidth all the way through, particularly on the
low end. Most of the audio sections of solid-state
receivers made for HF and having reasonably good performance
seem to have a built-in low-freq cutoff of 300 Hz. Nice
for voice comms, lousy for music or realistic voice
reproduction. The old vacuum-tube AM receivers were
designed for broadcast AM reception and other "hi-fi"
applications. (Remember the 'phono' input jacks on
National HRO-50/60 receivers). I tried to add a 12-inch
speaker to my Kenwood TS-850 and found out there was
still no low end there to reproduce.

Also, there is something about the "brick-wall" IF response
in modern receivers that makes their sound "different" than
that from the old receivers with their IF-transformer-derived
selectivity. I dunno whether it is some kind of coloration
added by the non-uniform group delay or the quasi-Gaussian
amplitude response (or more mojo), but the old guys just
sound, well, more radio-like.

> in a 2.1 kHz SSB slot, then SSB enjoys a "frequency
> utilization quotient" advantage of 2.85:1 over AM.

It's the same users/Hz-bandwidth argument that the
commercial people are using with great effect against
hams. How can we justify our little one-to-one narrow-
band comms on 70 cm when the whole world's population
is eagerly awaiting their 430-MHz rain-forest radar
data that requires a 10 MHz bandwidth to gather.

Besides, the SSB/AM comparison is really apples and
oranges. The SSB systems lack the rich, warm presence
of vintage AM operation and will never have it as
long as they have to use IF filter selectivity to
achieve adequate carrier suppression. The value of
this presence is incalculable and makes places AM
operation on a completely different plane in terms
of enjoyment of signal reception.

Agreed, Hundt was probably the poorest example of a federal
agency head ever to come down the pike. He did his dirty work,
totally screwed up and mismanaged the FCC, then left, leaving
behind the wreckage of his stupidity. As a member of the broadcast
industry, I watched this fool bumble along, having no idea what he
was doing and refusing any input from experienced personnel.

Phil, many engineers and technicians were not even close to
retirement age, and this was a great loss for the FCC and a
legacy to Hundt's stupidity. Many field personnel made lateral
transfers to other federal agencies. I still get email from a few.
One technician is now a ATF manager, yet another in Florida
started a landscape business which now employs 32 people.
Another I know transferred to the Postal Service and is a station
supervisor. One in Georgia is on the FORSCOM command
staff and is now on duty in Kuwait. Bottom line Phil, the FCC
lost a lot of talent when Hundt made his infamous decision to
abolish most of the field personnel, but the loss was other people's
gain!

Buncha nonsense. It's a hangover response by the "purist" tube-hugging
"Hi-Fi" crowd who object to the alleged "sharp edges" of digital
music. Anybody who plays Pink Floyd thru a tube-type amp is out to
lunch. For instance.

I have a Japan Radio Company NRD-545 40-bit I.F DSP DC to 30Mhz SWL
rcvr which is much more a computer than it is a "solid state" radio as
such. Has filters and tunable synchronous AM detectors out the wazoo.
With a $30 Rat Slack spkr the thing delivers AM like I've never heard
AM before particulary when the AM signal is in the mud. I'll flat out
state without fear of condradiction that there was never a tube-type
ham rcvr built which could touch this thing with a ten foot pole for
AM reception. No matter what.

Let's face if, guys. Reed Hundt was put there for one reason and really only the one - to convert the world to HDTV. He got it done, and all his other antics were peripheral to that. Those who got him installed were not and are not concerned about any of that.

You just might be on to something here, Ryan. This could be turned into a fun thing for amateurs. Non-traditional antennas, locations and possibly even radios. We'd have to draw the lines at spark rigs, but getting amateurs to build and operate radios under primitive conditions would be really cool.

Foraging for parts in dumps would be okay, but probably not as effective as in my youth. Junkbox parts would be acceptable. Tubes, transistors or even I.C.'s would be okay. Put together a transmitter and reciever. Now the biggest thing would be the power source. My guess is that most hams would use some sort of ni-cad charged with solar cells, but extra points could be awarded for making your own lead-acid batteries, or making up a turbine that would set in a creek or something like that.

This would be a contest where more points were scored for voice than for CW, due to it being more difficult to make an AM transmitter than a cw one. (I know that some here will bristle, but this isn't an operating contest, it is about a building and getting on the air contest - let's keep the cw/no cw war out of it please)

The contest would start say Friday night at whatever time. At this time, the groups involved would assume that power is lost, and would begin construction of their recievers and transmitters. All construction must take place off the power grid. 12 volt or gas powered soldering irons only, or breadboard construction.

Then Saturday morning, antennas would start going up. All antennas must be home made, and if needed, the tuner must be home made also. Extra points for tuner/ ladder line combo's. (more to make)

Then if everything works, (and that s a big if) you go on the air. Starting Saturday morning, the sooner you get a signal out, the more

points you make. The points would increment downwards every hour. This might let those who decide to go CW catch up a bit. The biggest single point attraction would be simply getting on the air.

The actual *number* of QSO's don't count for anything in particular. Operations would end on Sunday, points would be awarded for 24 hour operations, maybe distance, but I'm not sure. QSO's would have to last for at least 1 minute.

Now I would bet that this contest isn't going to interest a lot of the traditional "contesters" - no diss at contesting, as I really enjoy it myself - but it isn't at all about getting a big kW signal out and making a gazillion contacts and racking up multipliers.

This is a contest for the tinkerers, the self reliant types, and those who consider themselves survivor oriented. It sounds to me like every bit as much fun as field day or the PAQSO contest. This is just a back of the envelope sort of thing so far, but does anyone here think it could work?

Ham radio hurt itself by not changing with the times.
Now their reaping the fruits of stagnation because
of the historical official policies of a certain "non-profit"
publishing house in Conn. It's too late boys! Ham clubs
are dying, hamfests are dying. I told an ARRL director
back in **1981** to drop the code and look for
ways to incorporate the first computers into ham radio.
He looked at me and sneered at my thought of dropping
CW and said "..what relavance do computers have to
do with ham radio?" (after all...I was just a 16 year old
"kid" - he asked me that with a sneer also and he and
his group of cheap-ass old farts thought my comments
were quite amusing at the time - oh well.)

And yet, here you are, 21 years later, on a ham radio newsgroup. Just passing by, or did you finally dig in and do whatever you needed to meet the standards for the license?

Or did you wait until they lowered the standards to your level. People like that are waiting for medical standards to be lowered the same way too, so they can become doctors without having to do all that icky stuff that has no relavence to modern medicine.

Mike:

I'm typing as best as I can with my right hand numb, swollen, and bandaged
up after Carpal Tunnel suregry less than 5 hrs. ago today. I think your idea
would make more sense if it were directed toward a more practical mode
for operating under austere conditions -- and that is, of course, CW!
AM would be my very last choice for "emergency" or austere condx
since it doesn't offer the operational advantages of CW and doesn't have
the power efficiency of SSB or the data transfer speed of digital modes.
AM actually doth quite verily suck under anything but very high power,
clear-channel conditions. I'm sure that in any such "contest," CW rigs
would still dominate in spite of the point advantage for AM.

This is a good idea and I'm not poo-poo'ing it, but in this era of appliance
operators, I don't think it would get more than a handful of participants,
unfortunately.

Channelized v Fixed Channel

If you think it's the same thing try suggesting that each CBer be limited
to an assigned channel!

>
> Etc.

Very fair point, as a matter of fact. At one time the Tech pool, or at
least element 3A contained no HF questions. Perhaps, under the current
scheme element 2 shouldn't (I think it does, though?). Clearly there is a
demand for a licence with no code test, and arguably it shouldn't confer
CW operating privileges. How would you gauge the demand for a no-VHF
licence, or a no-SSB or no-FM licence, for that matter?

True, although somewhat hampered by the funny notion outside these shores
that a test should indicate competence in the subject tested.

>>

Quite true. I didn't research the code test because I knew I couldn't copy
code by any normal standards. My objective was just to get a US call. I
was already active on 30 MHz + as W3/G8VUK

Very few. A couple of times in the past few years I have considered it,
but it seems to be cheaper or about the same to buy something ready built

>
> Why should a new ham have to learn, say, the block diagram for a

> when that rig has a DDS-type LO?

Are you saying it's OK if we know nothing about radio. Wouldn't that be
CB? As for PLL v DDS that's an issue of updating the question pool, which
is our responsibility (OK, perhaps mine, as a VE)

>>

>
> It's the logical conclusion that results from your argument.

Let's spell this out. If I thought that code needed to be tested I would
say that the standard was too low, not too high. What I'm saying is that
the average US ham has done a test that is unrealistically easy, making it
seem less of an issue than it really is. If the test actually proved
competence it would be a huge roadblock to a much bigger number of people.
In many countries, at least until recently, the test was an actual test of
competence, in a skill that many don't want to use.

A reasonable test standard to prove competency in code would be too hard
for those who aren't going to use it.

>>

5 wpm is too slow to copy easily, but the ARRL test tapes are Farnsworth method. I wouldn't advise anyone to learn at a character speed of 5 wpm.

You will find those types in all age groups. Amateur radio is really a starting point. What you do from there is up to you. I saw a post from an individual on another site stating that he could type 50 words per minute and the small keys on his miniature whatever kept him from typing. I hated to break his bubble, but some years back I could send and receive Morse faster than he can type. No big deal, I suppose. Myself, I simply use 440 FM from an HT. Yeah, maybe it looks geek (I do NOT carry it everywhere) ... but when the telephones went out at my employers and everyone was scrambling to borrow someone else's cellphone I couldn't resist. I went to the locker and pulled out the HT. Turned up the volume, hit some buttons, and up came the dial tone. Placed me call and enjoyed every minute of it. You'd be surprised. A lot of folks sneer at the over 50 set .... yet a group I am heavily involved in has a few of us over 50 year olds. You'd be surprised at the help that group has given other concerning computers. Protocols, addressing, interrupts, you name it. The common thread (and a few of us have passed Morse code tests) is that those who have been willing to learn continue to enjoy learning. That, my friend, is what seperates the folks who generally do well and those who don't. You happened to run into a few that probably stopped once they passed one test and no longer want to learn. They are likely not doing too well.

Hans,

While I think the original post was a bit 'adversarial' to ham radio, I DO agree with the BS from the movie 'Frequency'. No, I didn't see it. The story line and the teasers I saw just didn't excite me at all.

But, I found the reaction of a lot of HAMs to be objectionable. There were guys out there thinking that the movie will be the savior of declining ranks. Clubs were even setting up stations and displays for ham radio at some of the theaters. Geesh, IF I had gone to the movies and if I ran into one of those setups, I would have made SURE I hid any external indication I was a HAM.

I have to agree with your point about the movie to a large degree. The movie did kind of make it look like people never use amateur radio anymore, or that ham radio is some kind of relic from the past that has been pushed aside by the computer age. In all fairness though, if you rent the DVD they do have a nice segment about ham radio operators on there that makes the hobby look pretty good.

I'd think that since the idea is to communicate, that is transfer intelligence from one point to another, the contest should be wide open and the winner should be the first person or team to construct a radio system to transfer a standard message using that radio system - and receives an acknowledgment- whatever the mode. If a digital guru can strap together a few digital ICs and get it done, he wins. If Larry cobbles together a CW rig and gets the message sent, and and receives the confirmation via the same mode first, he's da man.

In article <3DAA0F8B.8040306@adelphia.net>, Mike Coslo <mcoslo@adelphia.net> writes:

>Here you have a point I've been told that at one time the setup had to be >done during field day itself.

In the early 1970s, a rule was enacted that all setup had to be done during the FD period. FD was extended from 24 to 27 hours to allow setup time.

But the rule was VERY unpopular. It also tended to reward speed over safety - not a good idea. So in a very few years the rule was changed to its present form, in which FD folks have two options:

- Set up ahead of time (not more than 24 hours before FD starts) and operate 24 hours

or

- Set up during FD itself, and operate the full 27 hours.

A compromise, yes, but there is no perfect solution. FD starts at 2 pm local time on the East Coast and 11 AM on the West Coast. Requiring setup to begin when FD does would put the hardest work in the hottest part of the day in places like Florida - not a good idea. Starting FD earlier (say, 10 AM on the East Coast) would make it start (and end) very early on the West Coast.

I've done single-handed FDs, where I did everything from beginning to end. These were all-out efforts, too, with big homebrew rigs, and generator power, at a site that was simply an open field. Last time I did that was 1995. Learned a lot! Also made 629 CW and 11 phone QSOs, good for almost 3000 points in 1B-1.

>off to have an extra day to setup. Food was provided, also restaurants
>nearby.
>Noone operated with a car battery, therefore I did not learn how.
>
>After everything is all set up, the rest of the event is a bunch of contests.

What else would you do with the stations?

The contest aspect is a good indication of the effectiveness of the station setups, and the skill of the operators. FD is a prime opportunity to determine what works and what doesn't, by actual test under field conditions. Also a prime opportunity to develop operating skills.

It's also a chance to try out bands, modes, equipment and antennas that you haven't tried before.

>I did not stay for the taking down of the equipment. I would like to learn
>more, but field day did not give the opportunity to do so.

You get out of it what you put in to it. Were you part of the planning? Did you bring any equipment, or help to set up?

What did you expect?

I need no lie. Here's under what condition and where:

In both cases, the communication was also asking for a call to 911:
- By the Ontario, CA airport on I-10, on a repeater: 146.820, to report

a stalled vehicle in a middle lane. Occurred in September 2000 - on the second Friday after Labor Day; forget the exact date - about 4:30pm.
- In West Los Angeles, on 146.670, to report an injury traffic accident. This one was over 5 years ago and at night.

However, in both cases, I asked for a CP and I GOT A RESPONSE. The 146.820 machine is monitored by someone who works for the Highway Patrol, and the 146.670 was at that time the "Henry Radio" repeater, back when they still had a real sales business, not just manufacturing as they do today.

That in itself could be okay. (not too many participants to start)
Although I don't have anything personal against appliance operators, I
don't think they get the whole experience of amateur radio.

My main reason for less points for CW is that the little rigs are really
simple to make (this would admittedly be THE way to go under ultimate
disaster conditions) But how about extra points for SSB/AM to CW
contacts for both parties during the thing? This would be a likely
scenario in real life when an actual disaster happens. It is also a good
argument for retaining cw skills, as under dire straits, it would be a
real tragedy if a cw operator couldn't comm with an ssb operator.

Would have helped if they had done more research and used a
Heathkit transceiver instead of just a receiver as the rig.

Well, the main thing we need to look at is..... Is it a contest or is an
event in training for emergency communications. Until that is decided,
discussion is pointless. If it is a contest then site truly is important.
If it is a emergency simulation then being able to set up under
less-than-perfect conditions is a reality.

BINGO, Mike! But the ironic nature of your statement may have been lost on some
readers.

Consider also the following:

- Those who do not participate in the planning or preparation for FD, bring
little or no useful equipment, contribute little or no help, but expect to have
everything patiently explained to them while setup goes on.

- Those who show up after setup is done and expect to operate a hot setup (say,
20 ssb at 4 pm on Saturday) - then rewards the group by working a station every
5 minutes.

- Those who haven't researched FD rules, practices, or history, but who are
sure they know what it's all about.

The student who wants respect must first show it to the teacher. The student who wants to learn must show readiness to learn and willingness to do the background work..

And it must be realized that not all of the student's questions can be answered in
25 words or less.

No wonder he sneered at you - computers were already in many ham shacks in 1981. There were code programs for both the Commodore and Apple II. I used one with an Apple II Plus and a shortwave receiver while in Germany.

License study guides were already starting to appear (mostly word processing files at the time, though one Apple II version even included graphic files). Radio Shack (Tandy) had several ham related programs for their computers. Even the little Sinclair had several ham radio programs, including a nifty little log book program for field trips - you could later transfer the data to your regular computer's database using tabbed-delimited text files (a friend had it and I showed him how to transfer the data).

The Osborne computer came with several ham radio programs from the factory, including an early attempt at an antenna design program. I played with those programs in a computer store I managed at the time.

Okay, so what do you want - for all the old, fat, male ham operators to kill themselves because you think they're unflattering? If you don't like what you see, leave. Absolutely nobody is forcing you to hang around ham fests. Regardless, don't expect anybody to go away because you have a problem with fat old men. And don't hold your breath waiting for an apology for some being too old, too male, or too fat, for your tastes. Deal with it or deal yourself out.

Mike, positive promotion can offset the negative stereotypes people see on television and in the movies. If we sit back while "Hollywood" paints us as relics of the past, that is exactly what more and more people will think.

Movies have been doing that for decades - in an early scene from the 194x movie, "The Thing from Outer Space," the radio operator is using a Hallicrafters receiver to transmit messages (with no microphone in sight - he's talking into the front of the radio).

>
>Very fair point, as a matter of fact.

We agree on something, then.

>At one time the Tech pool, or at
>least element 3A contained no HF questions.

Sort of. Here's the history:

From its inception in 1951 until March 21, 1987, the Tech and General shared the same written test (ancient Element 3). Only difference was 5 vs. 13 wpm code.

It was noted that this required prospective Techs to take a test involving bands and regs that the Tech license would not permit them to use. The HF privs of the Tech were tested for in old Element 2 (Novice theory).

So in March of '87 the test was split into elements 3A and 3B. Tech license required 2 and 3A, General required 2, 3A and 3B

>Perhaps, under the current
>scheme element 2 shouldn't (I think it does, though?).

New Element 2 contains a combination of old Elements 2 and 3A. But it's only 35 questions - a little more than half the size of the combination of old Elements 2 and 3A.

Restructure 2000 did more than reduce code testing - it also reduced the writtens.

>Clearly there is a
>demand for a licence with no code test, and arguably it shouldn't confer
>CW operating privileges.

Sounds like you want to kill off CW! Soon there will be no code test for any license.

There is a demand for a nocodetest license, and also a demand for a notheorytest license, too.

>How would you gauge the demand for a no-VHF
>licence, or a no-SSB or no-FM licence, for that matter?

By the use of those modes.

By that logic, US hams are not "competent" in Morse - and never were. Somehow it seems to me that if 70-75% passing is considered adequate competency for the written, then there's no reason to require a higher standard for adequate competency in Morse.

But I didn't like it at first. My original plan was to get a ham license so I could do 75 AM. Funny thing - once I had a decent set of CW skills, I liked it so much that 'phone became a secondary mode for me.

Learning CW wasn't exactly easy for me. No code machines, records, or tapes. I learned it by listening to hams on the air, using a receiver that was so unstable I had to write with one hand and constantly adjust the rx with the other.
>
>>>Maybe with a little practice I might have been able to copy a mere 60

Well, there you have it. It's not the code test per se, it's the unreasonable
UK test standards.

>>Is it the fault of code testing in any way?
>

>>>
>>>Right. But it's the theory side of it that bothers me.
>>
>> Why? How many hams, in the US or UK, actually build their own equipment
>> from scratch, or kits? (I do, btw).
>
>Very few. A couple of times in the past few years I have considered it,
>but it seems to be cheaper or about the same to buy something ready built

Which is why homebrewing has gone from a mainstream activity to a niche thing among hams. I build practically all my own ham gear, either from kits or scratch. But I have sources of parts at less than retail prices.
>
>> Why should a new ham have to learn, say, the block diagram for a
>> PLL-type synthesizer in order to use a manufactured rig? Particularly
>> when that rig has a DDS-type LO?
>
>Are you saying it's OK if we know nothing about radio.

Nope. I'm asking why certain types of theory knowledge must be tested for in the writtens, if a ham doesn't want to use that theory. It's analagous to "why must I learn Morse to use HF phone?"

Why must I learn transistors and ICs to use tube radios? Why must I learn theory to use manufactured equipment? Etc.

> Wouldn't that be CB?

Nope. cb has no licenses. Knowledge of the regulations and practices is needed to avoid breaking the rules.

But you don't have to know how a carburetor works to get a driver's license.

>As for PLL v DDS that's an issue of updating the question pool, which
>is our responsibility (OK, perhaps mine, as a VE)

You missed the point. Both PLL and DDS are used by hams. But there's no requirement to use either - yet questions on them are on the tests.
>
>>>>You only need about 70% right to get the 7 questions out of 10 right

That's simply because you are used to UK standards.

>What I'm saying is that
>the average US ham has done a test that is unrealistically easy, making it

>seem less of an issue than it really is.

Why is the US test unrealistically easy? I think the UK test, if it requires perfect or near-perfect copy, is unrelaistically tough.

>If the test actually proved
>competence it would be a huge roadblock to a much bigger number of people.
>In many countries, at least until recently, the test was an actual test of
>competence, in a skill that many don't want to use.

Who gets to define what comprises competence? Do the UK writtens require a near-perfect score?

>>>What I'm saying is that the US code
>>>tests have been so dumbed down for so long now that you don't
>>>understand over here why other countries are trying to do away with
>>>them.
>>

>>
>> Just watch.
>
>I hope you're right.

I hope I'm wrong, but I see no reason for things to go any different than I
have described. I also know that there will be at least one petition to
eliminate Element 1 presented to the FCC as soon as S25.5 goes away.

Given the FCC's behavior and public statements re code testing for at least the
past dozen years, keeping Element 1 without S25.5 would be completely
illogical.

>My XYL is studying General theory, in the hope that
>by the time she passes it she will not have to take a code test before her

The latest variation uses "customer service," "system administrator," or
some variation of that, at the receiver's server as the email address,
claims to contain a tool to check & remove this virus, and urges subscribers
to use it immediately. I received two like this in the last week.

Of course it's both an event and a contest. The event part provides practice and skills at setting up a radio station under less than optimal circumstances and working out the problems involved for best results. The contest part provides practice, experience and feel for handling fast traffic.
It's true, exchanging contact numbers and section information is NOT the same as working a large disaster event, but it's still training and practice toward that end that is very beneficial to the operators involved. The transition from passing field day contact information to handling disaster message traffic will be much quicker and easier because of that Field Day experience.

I see your point, but it would be more logical to keep them off CW than
HF. Actually the B licence in the UK at one time didn't permit CW use, but
that was changed. I m not trying to kill of CW, so I guess it's necessary
to let people use CW without a test, under the circumstances.

>
> There is a demand for a nocodetest license, and also a demand for a

>
> By the use of those modes.

Well, what about all the people who only use repeaters? No SSB questions
for them? Actually, I think that theory tests should cover all modes
(including questions on CW, like chirp and transmitter keying methods,
etc) but reading CW is pretty much self regulating, i.e. you can't use CW
anyway if you can't read it.

Not surprising when you compare it to AM. SSB was a major advance, but
it's very old news now. As a matter of fact, as we both know, it was
realistic to use mostly CW if you wanted to work DX before SSB, but it
changed everything

>

The manufacured equipment that most people use doesn't have tubes anymore.
Even linears are increasingly solid state

A car is virtually a necessity, though. Besides, you can transmit without
a theory test, just not on the ham bands

They just represent current practice. Tubes and free-running VFOs don't,
although I think hams should know about them

CW was dropped years ago to get into ham radio (no code technician). We
got bunches and bunces of new callsigns now....such as loser Lllllooooyyyddd.
But where is the quality?

You cain't blame it ALL on the ARRL. You can blame it on groups like BARF,
Stumpjumpers, K1MANs QRM Casts, and the FCC for twenty years of no
inforcement.

Not to mention trash such as the no ball no call types that are everywhere.

I remember when the chances of actually meeting someone you talked to on the air was quite low.

The guys/gals you met at a hamfest were locals for the most part. And you never talked to anyone local. You got into ham radio as a novice. Worked CW on HF. Upgraded to General and more HF.

VHF had its Tech class....but most of them were actually experimenters, as originally intended for that class of amateur licensee. If they were on the air, it was just to see if what they built actually worked. Then back to the work bench.

In other words....no one really cared what the other person looked like. All we used to KNOW FOR SURE about the other ham....was that he loved radio....for the pure joy of it. No conditions, no 'butts'. Just for the pure love of the art.

Perhaps this new generation of hams has a little too much vanity...eh?

Probably they used it as it "looked" more like a ham rig than
say an old Kenwood.... Also there were scenes where the
rig gets damaged and via time warp fixes itself. A subchassis
got bent and straightened itself out. Also whatever they had in
the props department or could find quickly on ebay.

At least they didn't use a Radio Shack or Cobra CB rig.....

My Ham License expires in Jan/2003 so I decided to renew while I updated my new mailing address. I performed this act online using the new ULS system.

I renewed my license too early (>90 days) and the FCC just sent me a notice that says they are suspending my license until i comply.

1) How do I comply?
2) How do I get my license back!

Please let me know.

Hamfests are not a representative sample of hams. Only of those hmas who go to hamfests.

Some true facts:

- Most technical avocations are mostly followed by males. Maybe it's nature, maybe it's nurture, maybe it's discrimination. Probably some of all three. But it's a simple fact. And it's changing.

- How old is "old"? When I was 18, 48 was "old". Now I'm 48 - and I'm not "old".

How old is vshah101?

- 61% of American adults are overweight or obese, according to the latest data. If only 25% of hams are fat, we're doing better than the national average! (Of course the terms "overweight" and "obese" have exact definitions when used in the medical data, whereas "fat" is very subjective).

Sure it is. How the ARS is portrayed to the public is a policy issue, pure and simple.

"Frequency" was a pretty good action/suspense/sci-fi movie, particularly because it was done on a small, personal scale. There were plenty of mistakes, and not just in the amateur radio stuff. For example, the word "firefighter" was used anachronistically.

I did not see any mention of a ham radio technical consultant in the credits. Perhaps we need to be proactive - say, have ARRL approach the various production companies, offering techncial advice and equipment. How many HW-101s do you think we could come up with on short notice for movie props?

One of the biggest problems ham radio has today is lack of publicity. Movies and TV shows can be great publicity - if they are done right. Definitely a policy issue.

'zactly. Most hams were "HFcentric" (pun intended).

In these parts, many hams were on VHF/UHF, but as a secondary thing for local
comms.
>
>VHF had its Tech class....but most of them were actually experimenters, as

Some of the VHF/UHF types were serious contest/DX ops as well as
experimenter/builder types. They worked the VHF contests and tryed for records.

And it's all around, Jim. I was the v.p. of an astronomy club a few years ago, and I put together a "star-party in a really great dark-sky area (Cherry Springs, PA) The party was an immediate and lucrative success. The first year, I put about 5 kilobucks in the treasury, and IIRC, the second year, $10K.

Problem was, I couldn't get any help. My wife and kid ended up doing most of the work, along with a 75 year old XYL, and two other guys. The club members for the most part just whined about how it was such hard work.

And when the board of directors overode all my ideas on what to do with the money (mostly spending it on things they personally wanted) and the two guys who did help threatened to quit unless I restructured the party so they would have less work too, I quit.

I absolutely HATE lazy people!

But the story has a happy ending. I upgraded my license, sunk my teeth into the ARS, and joined a Ham club, where I found people who could enjoy a shared labor, and have been having fun ever since.

Did I mention I can't stand lazy people?

I usually give the benefit of the doubt at first, but it can wear thin
quickly.

> - Those who show up after setup is done and expect to operate a hot setup (say,
> 20 ssb at 4 pm on Saturday) - then rewards the group by working a station every
> 5 minutes.

Yes, that annoys me pretty well. The only way I've found to cope is that
I walk away from the main stations during the day, and at 2400, I get
the 80 meter station with another fellow for the rest of the night.
During the day this year, I hosted the GOTA station. Working with the
younsters and less experienced hams, I expect slower operating, so it's
no problem.

Hi Jim,

Yes, it was a pretty entertaining movie, despite its inaccuracies. My brother-in-law caught a piece of it and ahs really shown some interest. I bought him a pre-viewed (Remember when that just meant "used?") DVD so he could watch the entire flick, along with the special documentary section on 'The Technology Behind Frequency.' It has a section on 'Ham Radio.' A used, er...ah "pre-viewed" copy of Gordon West's Technician Class License study guide accompanied the DVD. ;-)

Uncoordinated repeaters were the only "Good Amateur Practice"
violations that I've ever heard of. Apparently it takes a pretty big
"bad" amateur practice to be noteworthy.

But even that doesn't result in the FCC taking action. Look at the Southern California situation, especially concerning certain operations that concentrate around certain repeaters (but of course, not limited to such examples).

Actually, it is still that way for me. We're ham operators, not beauty contestants. Who cares what the other person looks like? I just want to talk about radios with him - not marry him.

> Perhaps this new generation of hams has a little

This newer generation has a little too much of something, but I wasn't particularly thinking of vanity. :)

Reapply properly now that it is within the time restraints. If that doesn't work, call the FCC.

I just had a couple of guys over today talking about some stuff where we
work
and one of the guys made a comment about me being into ham radios and
the other guy said "whats ham radio?". So now I have a late 20's fellow who
I
explained amateur radio to, and what could be done with it. When I told him
about my chat using PSK31 to a fellow in Spain this last weekend he started
taking a interest in this radio thing.

BTW my son-in-law has been studying and says he's going with me next
month when I go for the General upgrade and test for his Tech license.
I guess it didn't hurt helping him get a job with one of my ham friends, who
just happened to tell him if he worked for him he'd have to get a ham
license ;^)

try eQSO it rocks. No DTMF tones required, how you remember them I'll never know (probably where your system falls down). Multiple gateways in the same conference, put a call out on 434.5, 145.2785, 51.920Mhz etc and you are guarenteed a QSO. The RF client (uses VOX as default) is so easy to set up every Ham with a PC should be able to put a gateway on the air in minutes*

*note, this requires a Notice of Variation (NOV) to your licence in the UK, available from the UK Radio Authority.

5 lottery numbers. You got two control ops to talk to you in
emergencies over a five year period. That's pretty good luck in
anyone's book.

Mike:

Thanks for the good wishes re: my right hand. Swelling is now gone down,
and I am experiencing some postoperative soreness. I have yet to dig in to
my supply of Percocet. I may save it for the nighttime; I want to have my
wits about me during the day so I can drive, etc. Will probably be borrowing
a friend's "spare" automatic transmissioned Honda Accord tomorrow or
later in week and get back to doing some routine errands. Don't know
about driving my 5-speed manual Toyota Corolla yet.

Re: SSB ops making cross-mode QSO's with CW ops. I've done this very
few times in my ham career, from both ends. The problem these days is
that most SSB ops aren't CW ops because they either never have been or
are a long time removed from regular CW operation and can't handle it
anymore.

The whole problem is that there is too much negative emotionalism over
CW. Those who don't use it aren't using it because they hate it. I don't
use SSB but I don't hate it. The hatred for CW is based on fear -- in this
case, fear of the effort required to master it, or of failure to master it.
Since
ham radio isn't particularly well known for attracting highly motivated,
ingenious people of above-average intelligence in these days of dumbed-
down licensing requirements and appliance operation, we're going to have
few, if any, opportunities for cross-mode QSO's in the future.

Was in the LA area back in 1996, and the machine on 147.435, well,
don't let the young kids listen. I understand Riley is on that case now.
Don't know if it is better now or not.....

Wouldn't most uncoordinated repeater problems be solved with
the use of directional antennas to null the coordinated machine
and its service area, and
maybe PL or anti-PL installed on the uncoordinated machine?

And if the band is that crowded, is that machine really necessary?

One of these repeaters, currently calling itself W6NUT, is probably active about
75% of the time. That's one of the "bad" ones.

If crowded, then yes. However, if significantly overlapping, the inteference
pattern degrades both.

I was thinking of the case where there is just some fringe overlap.
Anyway, I don't have a machine and not looking to put one up.
Would need to get some expert help if I did want to.

Me too. Laziness itself can be a good thing if it inspires you to find a better way. Years ago I climbed trees to put up FD antennas, now it's the Robin Hood or Tom Sawyer methods for me.

Yes, that annoys me pretty well. The only way I've found to cope is that
>I walk away from the main stations during the day, and at 2400, I get
>the 80 meter station with another fellow for the rest of the night.

That's one way to deal with it. Here's another: Organize the FD stations around "station captains" or "team leaders". IOW, each station is a unit unto itself, under the control of one or two people, who decide most issues. Club provides things like power and food. Then YOU be one of the leaders.

This method requires that each station is assigned certain band/modes and no others, but it works. I go for 80/40 CW and let the rest go.

Here's another one:

- folks who stand around a working station carrying on loud and raucous conversations while the ops are trying to work a weak one, or a station buried

in QRM.

>During the day this year, I hosted the GOTA station. Working with the
>younsters and less experienced hams, I expect slower operating, so it's
>no problem.

Cool!

I thought a corner reflector would be about perfect.

> And if the band is that crowded, is that machine really necessary?

The ones there now are coordinated and unused. Would an uncoordinated
yet used repeater be such a big problem?

Perhaps time sharing would be a solution.

1942. Homebrew new directions?

I was reading the thread about the death, or dying art, of homebrewing in Ham Radio. I have to agree the major reasons for it are the cost issue, can't compete with the new whiz-bang surface mount rigs, and the complexity of modern gear. I also think that at least some kind of kit building should be encouraged for those Hams who don't get involved with hands-on electronics through their work. One should at least know what the parts look like, and learn basic skills like soldering. You would be surprised by how may people in electronics can't solder for crap. Anyway I think the nature of homebrewing is going to take a new direction. Like everything else nothing stays the same forever.

The point that Ham homebrewing will take new directions is demonstrated by the death of magazines like "Byte", "PC Tech Journal" etc. All of them dealt with the hardware aspect of the computer hobby. In the mid to late 70's and early 80's everyone was more concerned with how computers worked. Some didn't work that well because of hardware design issues. It was almost necessary to know something about the hardware to fix the thing. Now days with computers being so complex almost nobody even thinks about messing with the hardware other than to swap boards, drives, etc. You don't find your average computer hobbyist modifying the motherboard logic. So the main thrust currently is the software driving the hardware.

You're probably wondering what this has to do with Ham Radio homebrewing? Well the parallel is very close I think. The point to dwell on it is the so called SDR, software defined radio. At this point in time why not let industry do what it does best, make cheap complex hardware. The real value is in what the hardware does. Just like the software driving the computer hardware to do some useful function. The key is the software.

Most of us working in the electronics industry realize that most of the "signal level" functions done in our rigs are mathematical functions, and implemented imperfectly by analog circuits. So just chuck the troublesome analog parts, and perform the functions in software, A.K.A. DSP. All the SDR rig needs is just enough hardware to digitize the input signal, and a PA section to pump the results out to the antenna. All the fancy modulation, demodulation, compression, etc. can be coded in the software. It's the advances in DSP techniques, algorithm development, etc. that will be the future advances in communications. Hams have a real opportunity to contribute here. We can experiment with those new modulation methods, refine them till they either work, or are proved to be unworkable, by just shear experience of many of us using the methods on the air. I'm convinced

that what is possible in software would be either impossible using
analog methods, or just plain too expensive. So with the shift to DSP
techniques, as the future of Ham Radio homebrewing, that is where to
push the envelope on communications technology, and also a
justification for our continued use of valuable radio spectrum.

I brought up the fact that the Heathkit was a receiver, not a
transceiver. Because I am a ham I noticed it right away, but do
you think the rest of the audience knew or cared? They saw
something that looked like a two way radio and the movie told them
it was a ham set and that was satisfactory. The producers are not
going to spend time and money on some technical detail that only 1
in a 100 or so of the audience will have the foggiest idea of what
it is.
I will say that the movie 'Oh Brother Where Art Thou' did a good
job of attempted accuracy, especially of the radio station and
equipment where the 'Soggy Bottom Boys' made their recording.
Things there were very authentic for a radio station of the
period.

Hello Bert.... I may have also convinced my 66 year old Fire Chief (and his wife as well as 2-3 others on the department) to get licensed. I definitely think that looking into the emergency services crowd is a good thing as the general nature of people in those fields would make good hams because of the training, and structure they must follow. (following a chain of command, following orders and rules/regulations/policies/procedures etc....)

Silent Key NF3Q/W3HBC

(09/29/2002) Hilory Bracken Cox, Age 52, of Austin, Texas, formerly of Murrysville, Pennsylvania, passed away on Thursday, September 26, 2002. He is survived by his father, H. Bracken Cox; and his brother, Edward Warren Cox of Austin, Texas. He was preceded in death by his mother, Margaret Geyer Cox; and his paternal grandfather, George W. Cox of Pennsylvania. Hilory was born in South Charleston, West Virginia, on May 10, 1950, and graduated from Franklin Regional High School in Murrysville, PA. After graduation, Hilory traveled the Northeastern and Central United States as a musician playing the piano, keyboard and singing with several different bands. He also ran the sound system each week at Newlonsburg Presbyterian Church for a number of years. What Hilory enjoyed most was his family and friends, making music, working with computers, and Amateur Radio. He also loved animals and animals loved him. He earned his first Radio license in 1963 before he graduated from high school. He was very active in Amateur Radio in the Pittsburgh area and earned an Extra Class FCC license, W3HBC, NF3Q. Hilory was a member of the Masonic Valley Lodge No. 613, F. and A.M. in Turtle Creek, PA; Newlonsburg Presbyterian Church in Murrysville, PA; the Amateur Radio Emergency Service (ARES) in Pittsburgh, PA, and in Austin, TX; North Hill Amateur Radio and Skyview Amateur Radio in Pittsburgh, PA; and was a life member of the American Radio Relay League (ARRL). In November, 2000, Hilory and his father, Bracken, moved to Austin, TX, from Murrysville, PA. They are currently living in Austin, TX.

Exactly, Leland. The old ladder relays are long gone. We had a couple of minicomputers back in the late 70s, but they were expensive and trouble-prone. We also used DTL logic controllers. Of course, along came the programmable ladder controllers. Even ladder logic is going away. Scan times can be very small using high level software. Look at the things we take for granted today that were difficult (or impossible) not too many years ago. Satellite television. Digital television. I think you are right on the mark about the radios.

In Southern California, many repeater pairs are already shared (2m, 125cm, 70cm - 125cm has roughly 3 repeaters/pair). Only in the bands where there are less repeaters than available pairs is there no sharing (6m, 33cm, 23cm, and above) because it's not necessary.

If a coordinated repeater is unused but coordinated as OPEN, then why should the "competing group" put up their own? Why not use the one that's there? (That will take care of roughly half of all cases in most bands).

Not all high level algorithm developers are necessarily C code or such writers. Hopefully someone can write up a block diagram maker software package where you can specify filters, frequencies, bit depth, and such on the various functional blocks. At work I'm the system level guy, and I tell the C programmer what I need to have happen. He writes up the code after I give him the various parameters. And tell him to make it easy for me to "hack" the C code if I want to say change a filter's tap weights. I have trouble myself getting the C compiler to do anything other than say "syntax error".

But DSP can't do it all. The analog signal needs to be conditioned so the dynamic range, frequency content and such are suitable for the ADC to make it into usable digital. Especially in a receiver, where the levels
can vary over 80dB. And stuff like digital TV still goes thru the equivalent of a modem to go over the air as RF.

Most likely, at the transmit side, the signal (voice, whatever) is digitized
and compressed maybe mp3 style. That gives you a string of 1s and 0s. That, in turn, would go thru a modem to get the 1s and 0s onto a carrier of some sort. Then most likely feeds a DAC, then moved up (heterodyne) to a frequency in a ham band to be amplified and sent to the antenna.

Receivers are more fun, you need analog preprocessing to get the signal level up to feed a DAC with enough dynamic range so an inverse modem can recover the 1s and 0s. Even with lots of noise, QSB, QRM, etc.

Hopefully, the hardware radio platform will provide various analog blocks that can be software controlled and muxed as the DSP developer wants to condition the signal before it gets to the ADC, as well as allowing him

to do digital processing.

And imagine the fun virus writers will have....

Maybe that machine is at the other end of town, and coverage is spotty?
Then the group tries to put up their own machine for local use, but they
end up trashing the first machine's coverage in the middle of town. The
real solution would be to find a lightly used machine in their neighborhood.
But there may be political infighting and such that puts a stop to that....

Hey Lou, since your charts that allow "for modification to 10M or other freqs." are obviously intended for use by licensed hams, you might get more business if you posted this in ham newsgroups. Doncha think?

Been reading all the comments on this thread. As a long-time homebrewer, I can tell you that building stuf under pressure is only going to gather a few participants.

Perhaps what needs to be done is to revamp the FD rules somewhat so as to reward more emergency-preparedness and message-traffic related activities.

Here's one idea:

The FD exchange is too short - only three items need be exchanged (callsign, station class, section). Hardly a test of message handling capability. Look at the SS exchange: five items (serial number, class, callsign, section, check) and SS is in no way meant to be an emergency exercise. The FD exchange should be at least identical to SS, or maybe more involved (all of the above, plus grid square and county, maybe).

What do you think?

As time passes a libary of public domain DSP code will get built up,
like a subroutine libary, where you just pick and choose what
functional blocks to use in the design.

>

I agree. As technology advances the boundary between where the analog
electronics stops, and we switch to digital, keeps being pushed closer
to the antenna. At some point we may end up with the antenna going
straight in to the ADC.

>

With a fast enough DSP we may even be able to generate the frequency directly, lets say for HF.

The goal would be to feed the signal right from the antenna in to the ADC. Then do everything in software. The guys doing cell phone design are really pushing the envlope in that direction.

> Hopefully, the hardware radio platform will provide various analog
blocks
> that can be software controlled and muxed as the DSP developer wants

I feel some of the present analog signal processing circuits could be replaced by DSP, and likely do a better job of it. Why its not done now is the manufactures don't want to sink all that R and D money to duplicate the analog functions in DSP code if they can't recover the cost. it seems many hams are satisfied with the analog circuit performance currently being used.

>
> And imagine the fun virus writers will have....
>

That is an interesting point. A deliberate flaw in the rig's software that would allow somebody to up load new code in to the rig over the air, instantly disabling radios over a large geographic area. Gee, you wouldn't even need a EMP pulse to kill all the radios.

Don't be surprised if that happens some day. Remember when somthing as simple as your pocket calculator was so large it wouldn't even fit in to the average house. I think as time passes the bountray between the analog circuits, and digital, will more closer to the antenna. I understand your point. We may always be stuck with some analog circuits in the new SDR rigs to come.

> Hell, I'll even settle for a 455Khz DSP filter which can even
approach
> the shape factor of an ancient 500Hz Collins mech filter.

Get a good DSP prototyping board. I'm sure it can be done. I've used FIR filters to clean up data down loaded from digital storage scopes. The shape factor was nearly 1 using about 250 taps. The only real impediment is the DSP speed, cost, and dynamic range to do it in real time. From a pure programming stand point there is no problem, in fact one could design a better filter using DSP than the Collins filter you used in your example.

> Hey Leland, what's the blocking dynamic range of yer laptop on 40cw?

About 90 db. ;-)) Whats yours?

Hi Ryan,

Yeah, I think I've hooked my father via his love for avcomms. He needs a new airband receiver, so I suggested an Alinco 2m rig w/AM airband receive rather than an airband only receiver. He bit, so I gave him my old Tech study guide to chew on. What's nice is that his antennas get put up on top of a three story brownstone...at approx 75 ft., very much in the clear. I recently upgraded his 11m dipole to a three element Yagi. Dad found the resultant jump in performance, on both transmit and receive, startling. I found it the most enjoyable antenna installation I've ever done...flat-top with just a hint of a breeze on a warm day.

BTW, has anybody ever checked out the Magnum P.I. episodes that show Higgins' ham rig? It looks pretty authentic. On the show Higgins' call is N6DBZ, which is not an "Aloha" state call and is actually a valid call for a chap in CA.

Hello Dwight,

Just go to

http://www.arrl.org/fcc/stats.html

Breaks down the license numbers by license class, and state/territory. Updated every day or so. I post the totals here at the middle and end of each month so there will be a record in the USENET archives, and also to stimulate discussion.

The numbers are derived directly from the FCC database. Note that the totals are the number of current, unexpired licenses held by individuals (clubs and other group licenses are excluded, as are expired-but-in-the-grace-period licenses) Techs are kept separate from Tech Pluses, but the numbers are dropping dramatically due to upgrades, expirations and the FCC reclassing Tech Pluses as Techs on renewal.

The total peaked around February of 2001 and has hovered around 683,000 since then.

>>>no-FM licence, for that matter?
>>
>> By the use of those modes.
>
>Well, what about all the people who only use repeaters? No SSB questions
>for them?

See how ridiculous the argument gets?

The point is that the license test cannot be tailored to just what each individual wants to do at the time of licensing. Instead, the license test needs to cover a sampling of what hams actually do. There are no questions on multiplex FM stereo on the amateur tests because amateurs don't use that mode. But Morse use by hams is very common - particularly on HF/MF.

>Actually, I think that theory tests should cover all modes
>(including questions on CW, like chirp and transmitter keying methods,
>etc) but reading CW is pretty much self regulating, i.e. you can't use CW

>Not surprising when you compare it to AM.

My comparison was to all voice modes, not just AM.

> SSB was a major advance, but
>it's very old news now.

It's the most common HF mode used by hams, so it's very big news.

And while SSB was an advance, it brought with it some problems. The main advantages of SSB use by hams were:

- More simultaneous voice QSOs in the same bandspace
- Near-elimination of carrier heterodyne interference
- Lower cost of high-power voice transmitters

But SSB brought with it several disadvantages:

- Loss of fidelity and the personality of voice characteristics
- Greatly increased complexity of equipment, reducing the practicality of homebrewing
- Higher cost of low-power voice transmitters
- Isolation of HF amateur voice operation from SWLs, reducing the recruiting possibilities.

> As a matter of fact, as we both know, it was
>realistic to use mostly CW if you wanted to work DX before SSB, but it
>changed everything

SSB did not change that by itself. In the bad old days, most of the DX was on CW because of equipment costs and language barriers. As amateur equipment has become less expensive in inflation-adusted money, and the affluence and development level of much of the world has increased, voice operation has become much more available to the DX.
>
>> Learning CW wasn't exactly easy for me. No code machines, records, or
>> tapes. I learned it by listening to hams on the air, using a receiver

I disagree; anything that brings ham radio to the attention of the general public is a good thing for the hobby. Someone may develop a curiosity regarding radio after seeing the film, and may research it enough to go get their ticket. I've been a ham for 26 years, and I enjoyed everything about the movie, and I welcome just about anything that will bring AR to the laypersons attention.

I'm just hoping for a graphical program where I can draw a
block diagram and define parameters of the various functional
blocks. Like those Cadence CAD systems. And then a
compiler can then either create the code, or tell me
"syntax error". :-) I hate getting bogged down hunting for
such in lines of code....

>
> With a fast enough DSP we may even be able to generate the frequency
> directly, lets say for HF.
>

Possibly, but that DSP at such a high clock rate would be more
expensive. And if the signal bandwidths the FCC will likely allow
us to use (which could be as wide as an entire band if they change the
rules) say 350KHZ if we use 20M, would require only several MHz
clock rate (if we care about phase angles of our carrier, the more
we care, the higher the sample rate we need). And then that carrier
can then be heterodyned up to 20M via traditional analog methods.
Which may be cheaper than the faster DSP if we did it at full speed
to get it on 20M. Spread spectrum comes to mind....

> are really pushing the envlope in that direction.

That ADC would need to be sampled really fast (gigahertz region) and need
something like 48 bit resolution so you can DSP filter out that local 50KW

AM broadcast flamethrower in the next town, also that public safety
or taxi dispatcher transmitter so you can dig that rare DX out of the
noise on HF. Or you will get the equivalent of de-sense when the ADC
gets overloaded or the weak signal you want to hear is lost in the
quantization noise. And the sample rate needs to be at least twice the
highest frequency in the signal to avoid alias products (Nyquist).

DSP can be quite powerful if done with care, but you still need some
analog pre-filtering and conditioning.

You miss the point. The digital stuff doesn't necessarily replace the
analog parts in the receiver's front end, but it certainly replaces
the analog parts in the demodulators and provides filtering appropriate
for whatever it is you are demodulating. Similarly, it doesn't replace
the analog parts in the transmitter's power amplifier, it just replaces
the modulators.

A receiver doesn't usually need more than one front end, so soldering
together a good one built from whatever you want is fine with me. A
receiver can potentially make use of an almost unlimited number of
demodulators, however, so who knows what you could come up with if you
didn't have to find board space for a bunch more analog parts every time
you wanted to try building a new one.

>Hell, I'll even settle for a 455Khz DSP filter which can even approach
>the shape factor of an ancient 500Hz Collins mech filter.

Give me the amplitude and phase delay response charactistics and I'll
synthesize one for you. Of course, if a 50 Hz filter with constant
group delay is really more appropriate for the signal you are trying
to demodulate I can do one of those with the same hardware, while you'll
be waiting a long time for Collins to build one and then looking for
yet more board space to solder it into.

>w3rv
>
>Hey Leland, what's the blocking dynamic range of yer laptop on 40cw?

Mine's 110 db according to the spec sheet for the A/D converter. I
don't mind adding analog stuff in front of it, however.

None of it is anywhere near my field of technical expertise, I'd be wasting my time getting nowhere. These sorts of development efforts fall into the subset of hams which collectively have the requisite backgrounds & experiences. Or who have enough interest in the topic to learn enough to be able to do credible development work in the field. Which leaves me out.

Rumors, assumptions and knee-jerk profiling aside to the contrary there are technical experts who are hams but who are not EEs and/or code warriors . . but who certainly do understand what development efforts are all about. Yeah, been there in spades, I am not a cynic for no good reason.

Obviously. Archimedes postulated 2,200 years ago that if he had a long enough lever he could lift the whole planet, "they're still workin' on it . . ". A 500Hz DSP filter with a 1.1 shape factor and a five-second processing time oughta be a real thrill at 40 wpm.

I'm not dissing SDR radios, the technology or you as such. Certainly the stuff is out there in the future. What really pisses me off is that given the real expertse we have in the hobby precious little of it is ever focused on actually getting all these whizzy new technologies up and running on the bands. Versus the usual motormouthing about it in the newsgroups, especially in this looney-bin.

No biggie, Kenwood will hand the new technolgies to us eventually. As usual.

>
> > Hey Leland, what's the blocking dynamic range of yer laptop on 40cw?

ENIAC wasn't all that big. Took up part of the basement of a fair-sized building, that's all. Would fit in the basement of a large home. And the reason it was so big is that they used big parts that weren't on high wartime priority.

Couple years ago a bunch of undergrads at the school where ENIAC was built implemented the whole thing on a chip.

Yup.

Fact is, neither analog nor digital is the entire solution. Right tool for the right ob, that's all. You trade one set of problems for another. Example: digital synthesizer stability vs. analog oscillator's lack of phase noise.

>> > Hell, I'll even settle for a 455Khz DSP filter which can even

I'm sure it can be done, too - but who is doing it? Classic bell-the-cat problem. Plus you have the problem of cost (in time and money) of the proto board vs. just buying the mech filter.

This is one of the main reasons you don't see as much homebrewing as 40-50
years ago. Time spent building is time not spent operating. If you prefer
building, fine, but whether it's soldering or writing code, it doesn't work a
soul until it's on the air.

See TAPR, above.

There's another factor going on here, too. We've all seen PCs and cellphones go
from big clunky expensive monstrosities to smooth cheap systems in the past two
decades or so. But that development was driven by umpteen millions of dollars
of development money and related resources, because there were billion-dollar
markets to be tapped. Fortunes were made and lost on the way to today's
systems.

And along the way there were fortunes made and lost, and kilotons of unwanted hardware discarded. How many $2500 computer systems have become doorstops in less than 5 years since 1982?
>
>No biggie, Kenwood will hand the new technolgies to us eventually. As

40+ years ago, the Squires Sanders SS-1R had BDRs well in excess of 120 dB.

My newest HF rig has 136 dB BDR. Cost less than half the price of a low-end lapper. Built it in about 30-40 hours, tops, taking my time and following the instructions.

Jim:

Soooo -- a year after Restructuring, growth of the ARS has virtually stopped in it's tracks? How could this be? We've reduced the maximum code test requirement to abject insignificance, which, as we were promised by the NCTA, was supposed to flesh out our ranks with an influx of eager, intelligent, young, socially diverse, computer literate, technically involved, and public-spirited new radio amateurs. So where ARE they, anyway? The membership of the club I belong to has dropped 40 percent since Restructuring Day!

Oh, I get it. We have to zero out the code testing requirement. After that, the resentment will be gone, and we'll start getting some more new hams out there, all ready to make their 4-figure donations to the ARRL to get that coveted Diamond Club Director's pin.

Bert:

The call could belong to a technicial type associated with the production of the series, who lent equipment and his call sign to the show in order to increase authenticity to Higgins' ham radio station. However, the fact that they didn't bother to use a call with the KH6 or WH6 prefix somewhat baffles me.

>Ryan, KC8PMX

Ryan:

What in the world does "following a chain of command" or "following orders"
have to do with Amateur Radio? Any fellow ham who tries to "command"
me or "order" me usually gets told which bus to take, and precisely where
to get off! Some kind of self-styled Sgt. Rock is precisely what the ARS
has no need for whatsoever! The vast majority of hams have no problem
following the rules and regulations, so this is a totally invalid concept,
AFAIC.
Police, firemen, EMT's, etc. have their own professional communications
systems which give them precisely the capability they need, when they
need it, with adequate backup and emergency reserve capability. If they
do get involved in amateur radio, it should be because they're attracted to
it for purely hobbyist purposes such as DX'ing, contests, rag chewing,
and the like. They shouldn't have any need, desire, or use for Ham Hero™
status, and if I were one of them, the last thing I'd be doing is encouraging
other hams to stick their noses in my business as an emergency services
provider.

I would tend to agree with you. I think there will always be some need
for analog filtering before the DSP takes over. You have to implement
those Nyquist filters somehow.

Now don't get me started on the Mary Hobart's latest brain child. Mary, by the way, is now a ham. It seems the League began feeling the heat in the aftermath of Diamond Mary's first epistles to the troops in which she outlined our responsiblity as radio amateurs and League members. The powers that be must have run her through some licensing classes in a hurry. Now every letter features her spiffy new vanity call.

Did you know that (according to Mary) League membership is no longer simply a subscription to QST? I labored for nearly four decades under the illusion that ARRL membership was always more than a subscription to QST. Let's see--where did I put my check book?

You're being overly sensitive, Larry. I think he was referring to their ability to follow a rigid rule structure like that found in the FCC rules concerning ham radio (rigid compared to some other radio services). His premise is that a person with that type of background (experience with other rigid radio practices) would probably more easily accept our rigid rules than perhaps a person without that background. Such a person might also be less likely to dislike or reject a service with such rules. The premise is sound, even if poorly stated (or perhaps even overly emphasized).

Larry
I like that term "Ham HeroT" ! Around here we have "Emergency Hams".
You never hear them on the radio UNTIL a "small" storm comes, or there's
a "chance" of bad weather then all the Wannabes come out in droves!

The best one is when they get on the repeater and say "maybe we need to
call up the weather net incase the NWS needs us to", talk about the tail
wagging the dog!! Can you say 2 meter CB'ers? ;^)

Amateur Radio Newsline™ Report 1313 – October 11, 2002

Amateur Radio Newsline report number 1313 with a release date of Friday, October 11th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A first ever Amateur Radio satellite for New Zealand and hams are honored in the U-S mid-West These stories are first on Amateur Radio Newsline report number 1313 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ZL ANNOUNCES PLANS FOR KIWISAT

Ham radio in space is coming to New Zealand. This, with announcement of a new ham radio satellite to be designed and built down-under. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has a close-up look at Kiwi Sat.

--
Yes, that's actually its name. Kiwi Sat. And in case you were not aware, the Kiwi is a bird with thick hair-like feathers, no tail, a beak one third the length of its body, and nostrils at the tip. It looks like a cross between a hedgehog and an anteater. And its found only one place in the world. Here in New Zealand. Its our mascot and we love it. And now the hams of Kiwi-land are naming our soon to be built ham satellite after it.

Like the bird that its named after, Kiwi Sat will be a bit unusual in its own right. It will be a rather small ham-sat. A 237 millimeter cube based on the early 1990's Microsat technology developed by AMSAT. But it will carry some 21st century electronics that will enable it to run both as linear translator for low duty cycle modes like sideband and C-W as well as an F-M transponder to serve the needs of the overall ham radio community. This, even though the solar cells can only produce a maximum of 15 watts of available power at any given moment and an average of only 6 watts. Uplinks will be on 70 and 23 centimeters with Kiwi Sat talking back to Earth on 2 meters.

But there's more. Plans also call for Kiwi Sat to carry some sort of scientific experiment and possibly even a digitalker module. This would permit the satellite to identify with its own voice as well as provide some good publicity for the Kiwi Sat project. All of this made possible by the many advances in microchip design that have taken place since the first Microsat was launched.

There is one big difference between a feathered Kiwi and the ham radio satellite the hams down here are building that I should mention. A live Kiwi

cant fly. Kiwi Sat will.

From Auckland, New Zealand -- down-under -- I’m Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline.
--

A s we go to air, no completion or launch date has been announced for Kiwi Sat. An excellent article on the project appears in the summer edition of the AMSAT Journal. (AMSAT)

**

HAM RADIO IN SPACE: PC SAT IN ECLIPSE

Meantime users of the P C Sat ham satellite are being requested to please turn off all unattended night time transmissions. This, to conserve energy while the bird is not in direct sunlight and having its batteries charged.

According to Bob Bruninga, WB4APR, P C Sat left full sunlight on Sunday September 30th. The bird is still fully operational but is passing through 25 minute eclipses on every orbit. And because of these eclipses the overall power available on board P C Sat is down. Keeping unattended beacons off while you are not there cuts the load on the satellite power supply significantly.

Bruninga says that with everyone’s cooperation the satellite might be able to make it to full sun again in November. He adds that normal operations are O-K when the satellite is in sunshine and the batteries are on charge. (AMSAT)

**

RADIO LAW:: FOLLOW-UP – S.A. ACTS TO PROTECT THE 70 CM BAND

A follow-up to last weeks story on the probable threat to the 70 centimeter band posed by a planned Earth Exploration Satellite Service that’s soon to be launched. As reported last week a discussion paper will be brought before the World Radio Conference next year that directly targets 432 to 438 MHz for exclusive use by the Earth Exploration birds.

The threat is very real and now comes word that at least one national ham radio society is taking action to stop the incursion. The South African Radio Relay League which was the first to make information on the threat public is already engaged in urgent talks with the that nations telecommunications regulatory body. Their objective is to try and convince the radio law makers that such a reallocation of spectrum would be a severe blow to the future of amateur radio. Others national societies are expected to quickly do the same. (SARL, Q-News)

**

RESCUE RADIO: HAMS HONORED FOR TORNADO WORK

Ham radio Radio Skywarn spotters from 14 Central and Southern Indiana counties are being given credit for helping save lives. This, during an unusual outbreak of tornadoes the morning of Friday, September 20 th. Amateur News Weekly’s Jack Parker, W8ISH, tracked the storm and has this report.

--
When an F3 Tornado started it’s destructive journey across Indiana, Hoosier hams were hot on the trail. In fact, the storm moved so quick several amateur radio operators almost became casualties themselves.

The mid-morning outbreak started as a line of strong thunderstorms associated with a cold front. Tornado touchdowns were reported in several counties southwest of Indianapolis before noon. The storm gained strength as it ripped apart homes and businesses while tossing cars like they were matchbox toys. Many amateur radio operators saw first hand the destructive power of these late summer storms. Around 1:00 p.m., an F3 tornado touched down in Ellettsville, just west of Bloomington, Indiana. Two Ellettsville hams, Mike Poe, KB9SGN, and Russ Ryle, N9DHX, had close encounters with the super strong tornado. According to one Monroe County Spotter “The tornado went right past Mike’s house. Poe was in his driveway trying to get away in his truck and wound up dodging parts of his neighbors house while transmitting a warning to the Bloomington repeater. At the same time Russ Ryle was taking cover.

--
Ryle: “I was just passing information for my local area. First report I had was, we had a tornado on the ground. I could see some debris. At that point my wife and I took cover in the bathroom”.
--

As many as four tornadoes skipped across Indiana covering 112 miles. Over 20,000 homes were damaged. Thankfully, no one was seriously injured or killed. The National Weather Service office in Indianapolis credited the Skywarn spotters with saving hundreds of lives. As the NWS began to receive frequent damage reports, activation of spotter groups became critical. The NWS requested spotter information be relayed to their office as quickly as possible so counties in the path of the storm could be alerted.

According to National Weather Service Warning Officer, Dave Tucek, quick actions by spotters helped the NWS increase watch and warning lead times to 25 minutes or more, saving lives.

After the storm passed, many of the individual county spotters groups teamed up with their local Red Cross, Salvation Army and Emergency Management agencies to provide communications between shelters and county EOC’s. Some of the amateur radio operators found themselves working with damage assessment teams while providing communications for National Guard clean up crews. Reporting from Indianapolis, for Amateur News Weekly, this is Jack Parker, W8ISH
--

Following an aerial survey of the damaged areas, Indiana’s Governor Frank O’Bannon said this is the most wide spread tornado damage to hit the state in over a decade. Damage assessments are expected to be in the millions. (ANW)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K7UGE repeater serving Las

Vegas Nevada.

(5 sec pause here)

**

RESCUE RADIO: FCC OK'S NEW PERSONAL LOCATOR BEACONS

If you are a ham involved in search and rescue work, listen up. The FCC has issued a report and order that provides for licensing individual 406.025 MHz personal locator beacons or P-L-B's. The agency says that it will require mandatory registration of these devices with the National Atmospheric and Oceanographic administration.

According to the CGC Communicator, a 406 MHz digital P-L-B signal contains information on the type of emergency, the country an identification code of the beacon in distress and other information to facilitate search and rescue operations. Even more important, a 406 MHz distress signal can be received and stored on-orbit by the COSPAS/SARSAT satellite and later retransmitted to the ground. That should eliminate the so-called blind spots found in older 121.50 MHz and 243.00 MHz devices. (CGC Communicator)

**

ENFORCEMENT: YOU GET YOUR OLD CALL BACK

The FCC has written to Jamie H. King, Jr. of New Bern, North Carolina to tell him that it has canceled the Vanity Call Sign W4JHK and has reinstated his previous KG4RLJ call. Amateur Radio Newslines Bruce Tennant, K6PZW has more:

--

Back on June 19th the agency requested that Jamie H. King, Jr., provide documentation of his claim that he was a former holder of the W4JHK call sign. He responded by letters dated July 20th and 27th. In his reply King stated that he believed that the problem seemed to lie in interpretation of blanks to be filled in on the Vanity Call Sign application. He says that when he completed the application last February, he interpreted the line 'Former Primary Station Holder' to mean any primary station license, regardless of call sign, issued at a date earlier than the application. Therefore he says that he was referring to his previous license KG4RLJ when he checked that line.

But the FCC says that explanation might be acceptable if King had only checked the "Former Primary Call Sign Holder" block. But the FCC says that King also wrote in the call sign W4JHK. Also, that the application block contains the statement -- quote -- "This call sign was previously shown on my primary station license."

The FCC says that in view of the fact that King has never been a former holder W4JHK, that his call sign reverts to KG4RLJ. It says a license bearing that call is on its way to him.

Reporting for the Amateur Radio Newsline, I'm Bruce Tennat, K6PZW
--

The FCC adds that it is not pursuing further enforcement action at this time but cautioned King to use care in the filing of any future applications with the FCC. (FCC)

**

ENFORCEMENT: BIG FINE FOR SELLING ILLEGAL CORDLESS PHONES

The FCC has issued a $7,000 against Lightning Electronics Incorporated of Miami Florida. This, for willful and repeated violations of the Commission's rules involving Lightning's marketing of unapproved long-range cordless telephones. Phones that the agency says are capable of interfering with aviation safety. Phones that hams say are ripping up the two meter band. We have this report:

--
Back in February of 2001, the Federal Aviation Administration told the FCC that some pilots were reporting receiving sporadic interference to an aviation frequency here in the Miami, Florida, area. In March of 2001, the FCC’s Miami Office identified the source of the interference as a long-range cordless telephone being operated from an electronics store in Miami. That one was quickly removed from the airwaves.

As a result of the FAA’s concerns, the FCC launched a nationwide investigation into the unlawful marketing and use of long-range cordless telephones. During the inquiry, the Bureau discovered that electronics dealers were selling long-range cordless telephones in several states. It also found that certain of the long-range cordless telephones caused interference by transmitting spurious emissions on aviation frequencies. Even more scary -- others were specifically designed to operate in the aviation band.

During the investigation, agents from the Miami Office visited Lightning Electronics retail store. This took place on July 27, 2001. While there, agents saw several of the illegal long-range cordless telephones on display. Models included a Super Phone CT-9000, a Prolink CT-6000CID, and an Optima OP8810.

According to the FCC, a salesperson at Lightning offered to sell one of the units to the agents. As a result, on August 24, 2001, the Miami Office issued a citation to Lightning for violation of rules which prohibit the marketing of unapproved radio frequency devices.

But the company apparently did not heed the warning. On September 26, 2001, agents from the Miami Office and from the Tampa Office again visited Lightning’s retail store. At that time they purchased a Prolink BAO-6110CID long-range cordless telephone and antenna for $669.80. The telephone the agents purchased was capable of causing serious interference to aviation communications and was not approved for sale by the Commission.

On October 29, 2001, the Tampa Office issued a Notice of Apparent Liability to Monetary Forfeiture against Lightning but the company did not file a response. On February 21, 2002, the Bureau issued a Forfeiture Order. On March 8, 2002, Lightning filed a petition for reconsideration of that order indicating certain information did not pertain to the company. The FCC responded with a new order last May 21st and has now ordered Lightning to pay up.

From Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

So far the FCC investigation into the sale of these illegal high power cordless telephones has resulted in the issuance of several citations and fines by the agency’s Enforcement Bureau. Its also gotten a few that bothered ham radio communications on two meters off the air. (FCC)

ENFORCEMENT: SBC TO PAY $3.6 MILLION IN CONSENT DECREE

SBC Communications will pay $3.6 million to federal regulators for filing inaccurate information in applications to provide long-distance service in four states. The consent decree resulted from Federal Communications Commission investigations of S-B-C applications to enter the long-distance markets in Missouri, Texas, Oklahoma and Kansas.

In agreeing to the consent decree the company admits no wrong doing. In fact, SBC says that the inaccuracies were the result of good-faith efforts in describing highly technical matters and not the product of any intent to mislead. (Published reports)

**

NAMES IN THE NEWS: MITNICK SELLING LAPTOPS TO PAY LEGAL FEE

Former computer hacker Kevin Mitnick, N6NHG, says that he is selling some of his personal items to pay a lawyer who is trying to save his ham radio license. Mitnicks’ request to renew his license earlier this year end up in it being designated for a hearing. The items that Mitnick is auctioning off include his old Toshiba laptop computer which was taken by the government back in February of 1995. As this is written, that computer is up on e Bay with a top bid approaching $10,000.

A second laptop is also up for auction. It features a layer of fingerprint dust and red "X" marks where fingerprints were lifted. It also includes a mouse still housed in an FBI evidence bag. Both computers are signed on the bottom by Mitnick and former Apple executive Steve Wozniak. (Published reports)

**

NAMES IN THE NEWS: RAFY BRIEM N6FFT - TALKRADIO LEGEND -- RETIRES

Talk radio legend Ray Briem, N6FFT, has retired. Briem’s last show was on Sunday evening September 28th over Los Angeles radio station KRLA. Before moving to the 870 spot on the AM dial Briem spent several decades honing the art of late night talk over at KABC radio on 790 Kilohertz. While there his show was eventually put on the ABC radio network, nationwide. (ASWLC)

**

NAMES IN THE NEWS: A.PROSE WALKER, W4BW - S.K.

A. Prose Walker, W4BW, the man considered as the father of the "WARC bands" has died. Walker headed up the FCC’s old Amateur and Citizens Division from 1971 to 1975. While there, he made the initial proposal for the creation of the 10, 18 and 24 MHz bands at a conference in Geneva 1972. Later, Walker organized and chaired the United States the Advisory Committee of Amateur Radio. This committee took the initial steps to turn the idea into reality at the 1979 World Administrative Radio Conference.

But there was another side of Walker that hams in the world above 50 MHz do not remember very fondly. It was a set of highly restrictive repeater regulations promoted by Walker back in the early 70’s. Among other things, these rules required the submission of what are today called engineering feasibility studies in order to get a required W-R prefix repeater license. The regulations were so strict that repeater growth almost ground to a halt for the better part of half a decade. Eventually, the ham community lead by 73 Magazine publisher Wayne Green, W2NSD, rebelled against the Walker inspired rules. They were repealed as a part of repeater deregulation a few years later.

Walker was living in Rochester, New York, at the time of his death. He was 92. (ARRL, Repeater Remailer, W9JUV, 73 archives, others)

ON THE WEB: INTERNET OUTAGE ON UUNET

If you think that the Internet went away for a few hours on October 3rd, you are close. What actually happened is that some users faced heavy delays reaching Web sites and accessing e-mail for a few hours because of widespread technical troubles on WorldCom's long-haul network.

A WorldCom' backbone called U-U-NET carries most of the Internet traffic in the United States. The problems began about 8 a.m. and about 20 percent of WorldCom's U.S. Internet. Very few if any lost service and Worldcom had service fully restored by early afternoon. WorldCom says that the problem appears to have been with the lists telling router computers how to pass data on to their destinations. (Published reports)

INTERNATIONAL - GERMANY: THE CODE SHOULD STAY

Germany’s Deutscher Amateur Radio Club is that country’s national Amateur Radio society. As previously reported, the D.A.R.C. supports the retention of Morse code testing as a license qualification. Now, D.A.R.C. has put this position on the discussion agenda of the International Amateur Radio Union’s Region 1 Conference. Its slated to be held in San Marino in November.

INTERNATIONAL-UK: BBC AND B SKY B TO LAUNCH ALL DIGITAL TV NETWORK

The British Broadcasting Company and Rupert Murdoch’s B sky B network are teaming up to create a new all digital television service in the United Kingdom. According to news reports, the terrestrial service called Freeview will be launched on October 30th. It’s purpose is to fill the void left by the collapse of I-T-V Digital Television. If successful, it will give Great Britain a let up on the rest of the world by being the first nation with an all digital network.

**

INTERNATIONAL - NEW ZEALAND: HAM RADIO WALKABOUT

Well known land hiker Tony Whitiker, G3RKL, will be walking in the north island of New Zealand during the month of October. Tony will be walking from east to west and will be on the air using the callsign ZL6WFE. He will be on the New Zealand national repeater network and hopes to send Slow-Scan Television pictures live via the Internet Radio Linking Project gateways. (Q-News)

**

ON THE AIR: NEW PROPAGATION BEACON FROM FN20

On the air, Steven Kerns, N3FTI, in Reading, Pennsylvania reports over the VHF Reflector that he has established a new 2 meter propagation beacon from grid square FN20. Its on 144.279 Mhz running 4 watts out into a Discone antenna but he plans to change that to a halo in the coming weeks. Steve is also planning a 6 meter beacon to operate from the same location. QSN reports go to Steve at his callbook address. (VHF Reflector)

**

DX

In D-X, VE7XF is going back to the Cook Islands next weak in a muilti-multi operation to take part in the C-Q World Wide DX SSB Contest. He and the gang will operate from Manihiki on North Cook Island as ZK1MA during the event. Before and after the contest they will spend as much time as possible on 6 meter C-W and S-S-B with the call ZK1AKX. Listen for the operation from Manihiki from October 18th to the 31st and then on to Rarotonga South Cook Island from November 1st to the 11th. QSL cards go to Ralph Parker, 5330 Wallace Ave., Delta, British Columbia Canada at postal code V4M 1A1 (GB2RS)

K5AND, W5OZI and W5LXG will be operating from Montserrat from October 31st through November 8th. The trio will be focusing most of their attention on the 6 meter band using a Yaesu FT-897, a 7 element yaggi and radiating about 800

watts out and a Morse beacon on 50.155 Mhz.. From 20 to 10 meters they will run about 100 watts out. They say that the location is ideal for making 6 meter contacts across Europe, Africa and maybe even into the United States. As we go to air the most likely call sign they will use is VP2MJD. If you work them, Q-S-L as directed on the air. (VHF Reflector)

And Nick Peckett, G4KUX, operating as YA4F, has made what he claims is another first-ever contact on 6 meters from Afghanistan. Nick is now claiming that at 11:08 UTC on the 27th of September he worked VK6JQ in Broom, Western Australia for a YA to VK first on the Magic band. (G4NJH)

And G4IUF is on vacation in the Galapagos Islands. He hopesto be active on C-W and SSB from San Cristobal Island through the 23rd of October. He has requested the callsign HC8UF. (RSGB)

**

THAT FINAL ITEM: FIRST 'eDX100' AWARD TO 4Z4DX

And finally this week, word that the first ever 'eDX100' award, issued on the basis of electronic - or 'e QSLs' - was awarded on the 25th of September to Dov Gavish, 4Z4DX of Ramat Hasharon Israel. The ‘eDX100’ award is billed by its sponsors as an electronic equivalent to the ARRL's DXCC but is issued for receiving electronic QSL’s from a minimum of 100 DXCC entities through the eQSL.cc system.

eQSL.cc or the Electronic QSL Card Centre which sponsors the award is operated by Dave Morris, N5UP, of Garland, Texas. It is supported by an advisory board of volunteers around the world.

And true to the nature of electronic QSL’ing, 4Z4DX will be able to print an ‘eDX100’ certificate on his own printer. He will also receive a full-color certificate and a walnut plaque in the mail. (eQSL.cc)

>which was gonna "take ham radio into the new miilenium".

I remember all the doom-n-gloom in the 70's about how it would only be a
"couple years" until SS and/or compandored sideband was going to be the tune we
all rocked to.

Also, the December 77 QST featured the first of several articles on NBVM,
or narrow band voice modulation, also heralded as the new beat-all mode we'd
all be using in no time flat. It even earned itself a chapter of it's own in
the '79 Handbook. Anyone remember "coherent CW", also a "mode of the
future"...?

Funny how all those inevitable "advances" wound up being fads on the tips
of the tongues of the techno-nerds of the era, huh?

I know your question was rhetorical, Larry, since anyone with more than an
8th grade education and some practical experience in Amateur Radio matters
KNOWS where they are...Still sitting in front of the CRT or idiot box, wasting
away in mediocrity or apathy.

It was the same "promise" made over the introduction of the No Code
license in 91. There was a brief surge and then....kaput.

Yup. The numbers don't lie. Total increase about 8500, or less than 1.5%.

>How could this be?

The first of the post-Feb-14-1991 Tech licenses began to expire in 2001.

>We've reduced the maximum
>code test requirement to abject insignificance, which, as we were promised >by the NCTA, was supposed to flesh out our ranks with an influx of >eager, intelligent, young, socially diverse, computer literate, technically >involved, and public-spirited new radio amateurs.

SOME nocodetest folks predicted that - not all. But it was selling point that came up time and again in discussions.

Note that the written tests were also reduced in number and total questions.

>So where ARE they,
>anyway?

Using legacy modes like FM and SSB.

>The membership of the club I belong to has dropped 40 percent
>since Restructuring Day!

That's bad.

SOUTHERN NEWS - TAMIL NADU
October 19, 2002

Hams live in fear of crossing Lankan militant frequency

CHENNAI: Chakravathy, a retired teacher from Payathambadi, a village about 15 kms away from Villupuram had lost his vision years ago. Now, he is only hoping that he would not be shot dead by the Lankan militants.

A day after Chak _ as he is popularly known among the hams _ spoke to his fellow hams in Sri Lanka on 40 m band about universal brotherhood in 1985, three people, two of whose names he vaguely remembers as Ganesh and Ekambaram, gate-crashed into his house and threatened to kill him. (Ham is a hobby where people speak others with the same hobby through a special radio equipment on the amateur radio frequency)

``It was about 8 pm. They placed an AK 47 on my temple and said they had orders to kill me. I had to plead with them saying I am blind and there was no malice intended in my conversation. This was not easy. Later they seemed to understand. They had ordered me to serve dinner without salt. But when they left they said would return to kill me if they have any further orders from their supremo,'' says Chakravarthy.

That was a typical reaction of the Lankan militants towards any ham, who wittingly or unwittingly tuned into the amateur frequencies used by them. The movement of the Lankan militants, Chennai hams say, has been reined in since then but neither he nor any his fellow hams would dare go anywhere near such frequencies.

``I never spoke about this to anyone expect a few of my family members and fellow hams. I even refused to lodge a police complaint. Even now I hear them misuse the frequencies. But these days if I ever find them on radio I turn simply turn it off,'' says Chakravarthy.

Barring Chakravarthy, none of the 800-odd hams in Chennai are even willing to come on record about the abuse of the wireless radio by the militants. Though most say they too have a dreadful story to narrate.

``Most of us come across them. But why should we complain about them when I am sure the cost for it would be our life? There are times when we are threatened even if we accidentally enter their frequency. Sometimes even they listen to us,'' says popular ham, requesting anonymity. For instance, Sundar (name changed) of Velachery, who spoke of his equipment had to face a few men with arms the next day. ``He was only speaking about the equipment. Someone in the militant group also had the same equipment and wanted a manual. So they came to his house and threatened to kill him if he does not hand over the manual,'' says a another ham.

But this does not mean that the government does not monitor what happens on these radio frequencies. The Wireless Planning and Co-ordination Committee, formed under the Union ministry of Communication has an office in the Chennai, where such conversations are monitored once every week. The station also conducts examinations and issues licences, which are mandatory for a ham to use the amateur frequency.

``When we tune in to the amateur frequency we do hear some extremists group. But we record them and report to the department of home affairs, both at the centre and state,'' says an officer-in-charge at the monitoring station.

But why does the station not monitor it everyday: ``Because that is not our only job. Our main job is to see to provide hindrance-free frequency for the wireless users including police and paramiltary forces. Amateur radio is only a small slice of the frequency. And we expect the city intelligence to monitor this,'' says a senior official at the monitoring station.

While a senior officer in the City intelligence dismissed the issue saying they have never intercepted extremists and it was monitored by the Intelligence Bureau, the IB officers have put the ball back in court of the monitoring station.

``How can we monitor them when they have the state-of-the-art equipment?'' asks a senior official at the Intelligence Bureau. Meanwhle, the hams in the city seem restless. ``I played an important role in decoding messages after the death of Rajiv Gandhi. I have a acknowledgment from the CBI for the same. Though they know we can be very useful in tapping crucial information is sad to note that we are completely ignored. Forget anything else, we don't even have friendly networks,'' says a Chennai-based ham.

>If I remember right it also consumed about 150 KW of power too.

About half of which went to run the air-conditioning. 18,000 tubes, about 5 W
total per tube, you do the math.

But it did the job it was built for, and was the direct ancestor of all modern
digital electronic computers. The Army used it for at least 10 years. Now much
of it is back where it was built.

>On the flip side look what you get.

Of course.

>Whe better modulation techniques
>are developed you don't have to junk your present rig, you just
>reprogram it.

That's true only if the rig hardware is capable of the new modulation technique. Which may or may not be true. If a new modulation technique requires performance that your existing SDR cannot deliver, (high dynamic range, low phase noise, gain constancy, processing power, to name just a few) you're out of luck.

Look at how many big bucks "dream machine" PCs have been bought in the past 20 years with the idea that they would not be outgrown.

>So whats wrong with that?

Nothing "wrong" with it at all. But when the person doing it has lectured the
rest of us for years about "legacy modes", "electronic paintball wars",
"dinosaur dung encrusted regulations" and "better modes and modulations" being
"the future of amateur radio", it sure is surreal to see that very person
sporting a 2x1 vanity call and bragging about busting pileups on 20 SSB with a
100W manufactured transceiver.

Sounds a bit like "do as I say, not as I do".

What freqs do these militants operate on..?
Are they linked in any way to Al Queda or Bin Laden..?
There's already enough foreigners who are non-hams
taking up residence on 40 and 80 Meter SSB late
at night. Much of it coded/strange transmissions
late at night on the lower end of 40 SSB.

MANY people have "forgotten" where their
checkbook is kept when it concerns
the ARRL Dave. And why shouldn't they
really - grin! After all, when you get right down
to brass-tacks the ARRL is nothing more than
a New England quasi-blueblood society club
and publishing company that masquerades as a
"scientific and technical" Organization just so
they can keep that nice 501(c)(3) status and
their historic "gravy train" rolling on.

see: http://www.irs.gov/charities/article/0,,id=96099,00.html

Of course things and times have changed. Ham radio is
now obsolete and nobody young gives a hoot about
it anymore since you can get on the internet and talk just about
anyplace on the planet via a modem or a DSL.

(the magic and uniqueness is gone boys - besides, who wants
to invest in all that radio junk and antennas just so you can

talk to a bunch of cheap crotchety old white men? Take a listen
any night on 3.860 after 10PM to see/hear what I mean.
Does anyone think that any 16-18yo would want to get
on ham radio for 75 meters? Cut me a major break folks.)

Yup - I have that Handbook. NBVM was actually a pretty good idea, but it simply didn't offer enough payback for the complexity.

I remember when the first VHF FM repeaters showed up in these parts. Lotta hams said there was no way channelized FM on 2 would replace AM on the wide open spaces of 6 meters (no Channel 2 in Philly, 6 was more popular than 2 around here). Now VHF AM by hams is even rarer than HF AM. Go figure.

The real test is whether the pundits actually put the new modes on the air. The repeater folks and APRS folks and packet folks did just that.

K6 could be authentic for Japan as well. My ARS on Guam was authentic
with a 10th district call sign. And who wouldn't want "decibels" as a
suffix? Sure beats "intermod distortion."

Some ideas gain traction and some others do not. Without the so-called
"techno-nerds of the era", we'd still be smelling ozone from our spark
transmitters and trading hints on good sources of galena.

Larry, no it won't. Even after the code exam is a dim memory in the
ARS, I'll always resent the way you've treated new amateurs on rrap.
There was, and is, no excuse for it. Just to refresh your memory,
here are some of your best:

"Knuckle dragging 4-landers with Southern accents"
"...like Welfare Mothers of Color with their Hands out"
"My favorite Black on the Bus..."
"...don't let the door hit you in the ass on your way out of the ARS"

Can I come over and use your radio station?

Some folks in the hobby actually like the challenge of getting their
own stations on the air. Ditto people who would like the challenge of
putting a repeater on the air. Why should they be denied the
opportunity to grow and learn in the hobby? Just because someone else
was born first or got licensed first is a reason to deny to newcomers
the opportunity and satisfaction of building their own repeater? I
guess so. No newcomers need apply.

>concerning ham radio (rigid compared to some other radio services).

I don't think our rules are "rigid" at all, Dwight. Think about how much
freedom we hams have, compared to other services:

- Wide variety of modes and bands available
- Channelization, when used, is decided solely by hams
- Homebrew equipment usable without type acceptance or certification
- No license fees except vanity calls (VE fees are for the test, not the
license)
- No age limits
- No requirement to use the license at all.

Why don't you contact them and find out? The question was asked who is doing the work, well that got answered by the links. As far as who is using it I can guess from several of the posts at least who isn't. It a real shame that the computer guys are pushing the communication's envelope while I'm getting snide remarks still about ancient CW from several people in reply to my comments. Talk about being mired in the dark ages.

"D. Stussy" asked:

> If a coordinated repeater is unused but coordinated as OPEN, then why
> should the "competing group" put up their own? Why not use the one
> that's there?

One word:

Ego.

In the section of 3-land where I grew up, there were no 2m pairs available. Most pairs had machines on them, tho there were several pairs that had been coordinated a few years earlier, and the "owners" were *still* waiting on equipment.

One (in)famous pair sat coordinated but unused for years, ever since the repeater owner "temporarily" took the machine off the air for repairs. Eventually, after being vacant for several years, someone else put up an uncoordinated machine on that pair. The "owner" of that pair (note the quotes) didn't notice for several months, then apparently someone in his group discovered the intruding machine on the air.

Apparently (third hand info here; happened since I moved), complaints were filed with the coordinating body, and with the FCC. Nothing happened. Then the jammers started. Finally, the "owner" of the pair put up a repeater at his house (about 5 watts out), and then claimed interference. The pair has been silent since.

There are plenty of "ego boxes" on the air. I once plugged a VOX-operated tape recorder into a scanner, and scanned several pairs (where there were local machines) for about two weeks. I caught two phone patches (same machine) and, except for automatic IDs, that was *all*.

But don't try to use them, though. There was one repeater that was listed in the directory as open, and was the only repeater I could hit in the "dungeon" (computer center at the local college; in the basement) where I worked, on low power. I arranged to have a friend meet me on that repeater one evening, so we could figure out where to go for late dinner after work. We were on for about two minutes when the repeater was simply shut off. This wasn't a unique occurance.

Doesn't cost any more to be accurate. I'm sure plenty of hams would donate time
and rigs to a movie that showed ham radio accurately.

Agreed. Wasn't that a GREAT movie? Truly original retelling of Homer's Odyssey.
(btw, "Ulysses" means "man of constant sorrow")

One fault with this argument: "Ego boxes" usually aren't coordinated as open.
They usually appear as closed/private (some areas make a distinction between
these as separate statuses - that's not needed here).

FCC Judge Favors Schoenbohm's Return to Amateur Radio:
from The ARRL Letter, Vol 21, No 41
Website: http://www.arrl.org/ on October 19, 2002

FCC Judge Favors Schoenbohm's Return to Amateur Radio:

An FCC administrative law judge has agreed that the FCC should grant the General class Amateur Radio license application of Herb Schoenbohm--formerly KV4FZ. Schoenbohm lost his bid to renew his ham ticket in 2000 but applied for a new license the next year. Following a hearing on Schoenbohm's application last spring, an initial decision of Administrative Law Judge Arthur I. Steinberg October 11 declared that Schoenbohm appears qualified to rejoin the Amateur Radio ranks.

Steinberg wrote that the hearing concluded that Schoenbohm "has not engaged in any significant wrongdoing since his prior disqualifying misconduct," that his misconduct was not recent, that his "reputation for good character in his community is excellent," that Schoenbohm "has taken meaningful measures to prevent the future occurrence of misconduct" and that loss of his ham ticket "coupled with the shame and humiliation that resulted" make unlikely a recurrence of misconduct.

Steinberg concluded that Schoenbohm "possesses the requisite character qualifications to be a Commission licensee" and that the FCC should grant his application. Schoenbohm also has taken and passed the Extra class exam (Element 4), but that application was not part of the proceeding.

For his part, Schoenbohm said he was very grateful for the outcome and said he appreciated "all the amateurs who came to my defense and supported the application." He said he does not yet know if he will attempt to regain his KV4FZ call sign if his application is granted.

Assuming that the FCC concurs with Steinberg's initial decision, Schoenbohm has made good on his promise to one day return to Amateur Radio after losing a lengthy battle with the FCC to renew his license. Steinberg's decision followed this summer's Proposed Finding of Fact and Conclusions of Law from the FCC Enforcement Bureau, which recommended that the evidence presented at hearing supported giving Schoenbohm another chance.

In 1994, the FCC put Schoenbohm's renewal application for KV4FZ up for hearing following his 1992 felony conviction on federal fraud charges. The Commission finally turned down his renewal application in 1998, the US Appeals Court upheld the FCC's decision in 2000, and the US Supreme Court declined to hear the case later that same year.

In March 2001, a couple of months after his authority to operate as KV4FZ had expired, Schoenbohm took and passed the General class examination. A couple of weeks later, he qualified for Amateur Extra as well, but the FCC refused to act on the second application since it had not yet granted the first. The FCC designated Schoenbohm's General license application for hearing on the basis of character issues stemming from his 1992 conviction as well as his alleged lack of candor during subsequent FCC hearings on the matter.

>came up time and again in discussions.

Jim:

With all due respect, I would have to define "time and again" as a daily basis -- and the backbone argument of the NCTA.

>Note that the written tests were also reduced in number and total questions.

Yes, indeed. Yet, in spite of the overall licensing requirements being so significantly dumbed-down, we have (yet) to see any significant growth. I'm getting close to the point where I don't hold any hope for the future of the ARS, from a numbers/growth standpoint, even IF the code testing requirements reach the magical level of Zero.

>>So where ARE they,
>>anyway?
>
>Using legacy modes like FM and SSB.

But…but…but…(wiping the beads of perspiration from my brow)… WHERE is the DIGITAL REVOLUTION we were promised? How come my club doesn't have a single new ham who would even know where to begin to create a "software defined" radio, using LINUX or any other operating system?

>>The membership of the club I belong to has dropped 40 percent
>>since Restructuring Day!
>
>That's bad.

Yeah, especially since a significant amount of our losses were due to Silent Keys!

>And if that doesn't happen?

Uh oh. Then all these eager, young, bright, technically-oriented and highly computer-literate prospective hams would still have to face that 5 WPM code testing requirement for HF access! Oh, the humanity!

>btw, I know where my checkbook is. Mary doesn't get a penny.
>
>73 de Jim, N2EY

I'm just wondering how long I'll have to wait to see someone sporting a Director's level Diamond Club pin while haggling over the price of some cable ties at a local hamfest?

I'm not against the notion of helping the ARRL out with a financial contribution above-and-beyond my annual membership dues. However, I think the organization first needs to start acting like a company in dire financial straits, which it is. Paid HQ staff needs to be reduced to next to nothing. QST magazine should have it's cover price reduced, probably as much as 50%, in order to get it into more hands outside the subscribed membership. To "pay" for this price reduction, make it less glossy, less colorful, and more meaningful to potential hams. W1AW should be operated 100% by unpaid, volunteer operators, and perhaps with a significantly reduced bulletin/code practice schedule as a result. Chief Development Officer Mary Hobart, K1 More Money, Honey should have her pay put on a straight commission basis. She would get 1% of all donations made under the "Diamond Club" scheme. She can be allowed a "draw" on her commission, but it would have to be paid back out of actual earnings on a monthly basis. A special section in QST should be created to document the name, call, and donation level of all new "Diamond Club" members. I think you get the idea. If they do all this, I'll kick in an extra $25/year. I don't need no steenking Diamond friggin' Club pin!

Like I said, the vast majority of hams have no problem following our
rules and regulations. The minscule minority who do will eventually
face the swift justice of OM Riley.

>His
>premise is that a person with that type of background (experience with other
>rigid radio practices) would probably more easily accept our rigid rules
>than perhaps a person without that background. Such a person might also be
>less likely to dislike or reject a service with such rules. The premise is
>sound, even if poorly stated (or perhaps even overly emphasized).

No, the premise was self-serving. Ryan is obviously involved in firefighting,
and naturally sees firefighters and other emergency services workers as
potentially brilliant ham radio operators. Unfortunately, this is simply not
true. People who are professionally engaged in emergency services are
no more likely to be good, rule-abiding hams, and no less likely to be
loose-cannon LIDs, than potential hams from any other profession. I'm
no more enthusiastic about them as a group of potential hams than I would
be of librarians, mailmen, construction workers, or anyone else.

Amateur Radio Newsline™ Report 1314 – October 18, 2002

Amateur Radio Newsline report number 1314 with a release date of Friday, October 18th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC tells ham radio its not going to have to share 2300 Mhz. This story is first on Amateur Radio Newsline report number 1314 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ISSUES: FCC SAYS NO TO 2300 MHZ SHARING

First the bad news. The FCC has dismissed an ARRL petition that sought primary status for amateurs in the 2300 to 2305 MHz. Now the good news. The Commission has also turned down a paior of petitions from commercial interests that had hoped to share the spectrum with Amateur Radio. Amateur Radio Newsline’s David Black, KB4KCH has more:

--
It's not just ARRL that the FCC turns down. The Commission also dismissed petitions from MicroTrax and AeroAstro--both groups had sought access to 2300 to 2305 MHz. The FCC says it's denying the two commercial applications in part because appropriate spectrum is already available elsewhere. And, according to the Commission, neither company had demonstrated a need for additional spectrum.

By way of background, an ARRL bulletin says that MicroTrax had wanted to establish a Personal Location and Monitoring Service between 2300 and 2305 MHz. The petition by AeroAstro asked to share the band on a co-primary basis with Amateur Radio. AeroAstro wanted to launch its Satellite Enabled Notification System messaging service.

But the Commission says AeroAstro's request did not go far enough in protecting other serevices. The agency was particularly concerned that NASA's Deep Space Network would not be protected by the modified out-of-band limits AeroAstro had proposed.

The FCC says that -- at least for now -- amateur weak-signal communications in the 2300 to 2305 MHz band will be protected if the amateur allocation remains as secondary. The Commission says band will remain in its spectrum reserve. The status quo will be maintained, then, until the FCC re-evaluates the status of the frequencies in relation to the Amateur Service at some point in the future.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

The 2300 to 2305 MHz band is allocated to Fixed and Mobile services on a primary basis and to the Amateur Service on a secondary basis in all three International Telecommunication Union regions. The Radiolocation Service has a secondary allocation in the band in Region 1, and a primary allocation in Regions 2 and 3. (ARRL)

**

RESTRUCTURING: NETHERLANDS MAY SAY GOODBYE TO MORSE TESTS

Im Bill Pasternak, WA6ITF, with some late breaking news. It comes from the Netherlands where the Morse code could soon be going away. RSGB News reader Jeramy Boot, G4NJG, has the details:

--
The Netherlands is set to abandon the Morse code test next year. Rob van den Ent, PE9PE, reports that the Netherlands' national amateur radio convention took place the 12th and 13th of October. He says that the Dutch radio regulatory authority used the occasion to announce that if, as expected, Morse code is lifted as a mandatory requirement for an HF licence at nextyear's World Radio Conference, the authority would immediately eliminate the Morse code test in the Netherlands. At the same time, current VHF licensees would get direct access to the HF bands without further examinations.

RADIO REGULATIONS: BIG CHANGE AT THE ITU RADIOCOMUNICATION BUREAU

Ham radio has lost an significant post in the area of setting world radio policy. This, as a non radio amateur is selected to head up an important aspect of the International Telecommunications Union. From Brisbane Australia, Q-News Graham Kemp, VK4BB, has the details:

--
Valery Timofeev has been elected director of the International Telecommunication Union -- ITU -- Radiocommunication Bureau. Timofeev, who is Russia's deputy minister for communications and informatization, has extensive experience in radio frequency spectrum management at both the national and international levels.

Timofeev's election does mean for the first time in at least three decades, an non-Amateur Radio licensee will head the ITU Radiocommunication Bureau. The election took place during the 6th ITU Plenipotentiary Conference now under way in Marrakesh, Morocco. The meeting concludes October 18th.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

The political signifigance of this change is obvious. Having a ham radio operator in this position gave the service considerable leverage in negociations involving spectrum issues. (Q-News)

**

RADIO REGULATIONS: HAM RADIO GAINS OBSERVER STATUS AT THE IARU

The International Amateur Radio Union now has observer status at ITU meetings. IARU President Larry Price, W4RA, was on hand to represent the organization at at a major ITU gathering which was held in Marrakesh Morroco in late September. And Region 2 Executive Committee member Tim Ellam, VE6SH, is now participating on behalf of the organization. (Q-News)

**

THE WAR ON TERROR: COMMUNICATIONS STANDARDS ADOPTED

Back here in the United States, the communication industry has adopted emergency procedures intended to help maintain the nation's telephone, cable and Internet networks in case of a natural disaster or terrorist attack. The procedures were developed by a council of more than 50 industry officials formed by the Federal Communications Commission in January.

The group adopting the standards is called the Network Reliability and Interoperability Council. Their job was to recommend ways to strengthen communications networks to resist attack. The plan all have now agreed to will help companies in a crisis contact and work with partner firms to keep services running. (NRIC)

ON THE AIR: IRLP NODES TO GET AN EXTRA DIDGIT

Changes are in the air for those of you involved in internet radio linking. This, to permit an increase the number of possible I-R-L-P nodes to over 99 000.

Right now most I-R-L-P users will not notice any difference. Eventually IRLP node codes will increase from three numbers to four. The result is that node 640, for example, will become 6400. (G6PHF/Bass IRLP Group via APC News)

**

ENFORCEMENT: FOUR LICENSES CANCELLED IN EXAM INVESTIGATION

Turning to enforcement news, a group radio amateurs who did not show up for a retest are no longer membewrs of the ham fraternity. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “As a result of an audit by the Enforcement Bureau of the September 1st 2001 examination session given in Yucaipa California by the W5YI VEC, the Wireless Telecommunications Bureau has cancelled the licenses of four who did not appear for a retest. Those are Technician Camito E. Lopez KG6GJG and General class licensees Marcileno Llanes KG6HBR, Manual Vega KG6GSP and Marcial Rivas KG6HCP.
--

Duckworth says that the investigation into the exam session continues. (FCC, RAIN)

**

ENFORCEMENT: KENYAN PIRATES OFF THE AIR

Still in the enforcement arena, ham radio in Nairobi Kenya have gotten some relief from illegal operators. Kenyan Intruder Watch Coordinator Ted Alleyne reports that five High Frequency stations have been confiscated. Also, the operators of a Nairobi travel agency that was using 2 meter amateur frequencies were caught and equipment has been siezed. (Q-News)

**

ENFORCEMENT: IRANIAN JAMMER UPDATE

The 40 meter Iranian jammers we recently reported on are still being heard. Intruder Watch Regional Coordinator Martin Potter says that the jamming is being done to a low power station called Radio Mujahed. It’s being head in 10 Kilohertz steps from 7 point 010 to 7 point 090 Mhz. Potter says that S-W-L’s may find the same situation in the broadcasting frequencies as well. (Q-News)

**

NAMES IN THE NEWS: FCC CHAIRMAN POWELL COMMENTS ON MEDIA OWNERSHIP

Some names in the news. First is FCC chairman Michael Powell. He has warned that rules on media ownership will probably be struck down by the courts if they aren't modified to account for sweeping changes in the media landscape over the past 30 years. Powell's comments came shortly after the FCC released the results of studies suggesting that many ownership rules are outdated. The studies mark the foundation of the FCC's review of key rules on media ownership. (ComOnline)

**

NAMES IN THE NEWS: CULTURAL RESOURCE SPECIALIST NAMED

The C-G-C Communicator reports that Dr. Amos J. Loveday, Jr. has been appointed as the "Cultural Resource Specialist" in the F-C-C’s Wireless Telecommunications Bureau's Commercial Wireless Division. His job will be to

insure that tower and antenna siting projects comply with the requirements of the National Historic Preservation Act of 1966. He will also assist the FCC in establishing a closer working relationship with Native American Tribes and Native Hawaiian Organizations. (CGC Communicator)

**

NAMES IN THE NEWS: KB5HAV APPOINTED ASST MGR OF HURRICANE WATCH NET

Bobby Graves, KB5HAV, of Pearl, Mississippi, has been named as the Assistant Manager of the Hurricane Watch Net. According to the ARRL Letter, Graves appointment was announced by Mike Pilgrim, K5MP, who is Manager of the net. More information is on the web at www.hwn.org (ARRL)

**

RESCUE RADIO: AOL SIGNS ONTO AMBER ALERET SYSTEM

The worlds largest Internet service, America Online, says that it will soon begin transmitting Amber Alerts. The service says that the alerts about abducted children will show up on the screens of computers, pagers and cell phones of more than 26 million of its subscribers in dozens of states and cities beginning in early November. Warnings issued by most communities that use the system will go to AOL users in those areas who request to receive them. All but one of the existing Amber Alert systems are participating in the America Online project. (AoL)

**

EMERGING TECHNOLOGY: X-RAY EYES

If you thought only cartoon super-heros like Superman could see through walls to detect the villains, guess again. New technology called ultra-wideband will soon allow mere mortals to detect objects buried underground and to build cars enhanced with sensors that help avoid collisions.

According to press reports, ultra-wideband uses millions of narrow pulses each second to get an accurate reading of location and distance, opening the door for new applications in radar tracking, precise positioning and wireless communications. The possibilities vary from short-range computer networking for homes to devices that determine the location of golfers on a course.

What regulators like even better is that ultra-wideband devices can work within frequencies already allocated for other radio services -- helping to maximize this dwindling resource. The Federal Communications Commission believes the technology is so promising that the agency has proposed allowing it to be used on an unlicensed basis.

But it may be a while before the new technology is available. First, government agencies and private groups are testing to make sure ultra-wideband can safely coexist with other services, like the Global Positioning System. More information is on the Ultra-wideband working group website at www.uwb.org (Science Today)

HAM RADIO IN SPACE: PCSAT - HELP NEEDED TO BUILD A NEW BIRD

Bob Bruninga, WB4APR, of the P-C-sat Project Team has put out a call for an antenna designer for the next generation of this type of ham satellite. According to Bruninga, to get a free ride to orbit for P-C-Sat the satellite must fit inside of a perfectly spherical but totally passive mirror surfaced 18 inch diameter ball. Also, the antenna must be totally internal with no external protrusions.

To make it happen, the P-C-Sat team at the US Naval Academy Satellite Lab, needs a good RF designer and antenna modeler to help out. If you can help, please contat Bob Bruninga by e-mail to wb4apr@amsat.org. P-C-Sat is scheduled for launch in less than a year. (AMSAT BB)

**

RADIO IN SPACE: GOVERNMENT CONTRACTS FOR NREW WESATS

The government has selexcted TRW Space and Electronics to build the fleet of next generation weather satellites. The Redondo Beach California unit of Cleveland Ohio based company will build two satellites with options for up to four more.

Eventually six new polar-orbiting satellites will collect data on the Earth's weather and climate, as well as its land, oceans and atmosphere. The birds will go into orbit between 2009 and 2018. The contract to build the new weather satellites is worth up to $4.5 billion dollars. And that’s billion – with a B. (Published reports)

INTERNATIONAL – AUSTRALIA: THE CB MOUNTAIN CHALLENGE

Turning to the international pages, C-B operators in Australia are about to embark on what is best described as a cross between an emergency training operation and a contest. Its called the Mountain Challenge where the object is to accurately pass a message around the state of Victoria using C-B radio.

It will all take place on Saturday the 30th of November. Both 27 MHz and U-H-F C-B radio is used to get the message through. And this year the event will extend beyond Victoria, with C-B’ers in Mount Gambier and Tasmania having expressed interest in taking part.

Find this interesting? Want to learn more? Well you can – on the web at www.mrc.cat.net.au. (Q-News)

**

INTERNATIONAL - AFGHANASTAN: KANDAHAR GETS TV

A new television station in Kandahar Afghanastan is being called a resounding success. This even though the signal is so poor the Afghan musicians shown in the first broadcast looked like grainy, quivering ghosts. According to Abdul Ali who heads up broadcasting in Kandahar, all of the equipment is than 20 years old and had not been used at all during the years that the Taliban ruled the country. (Media Network)

**

INTERNATIONAL - CANADA: VE3CT WLECTED QCWA PRESIDENT

For the first time in the history of the Quarter Century Wireless Association a Canadian radio amateur has been elected as its president. Croft Taylor VE3CT , who previously served as vice president, assumed office on September 1st and will serve a two year term. The QCWA was founded in 1947. You can learn more at www.qcwa.org (RAC)

**

DX

In D-X, A group of five American operators will be active using ZK1 callsigns from Manihiki in the remote North Cook Island group through the 31st of October. They will be active on 6 to 160 metres on CW, SSB and RTTY. During the CQ World Wide SSB Contest on the 26th and 27th of October they will use the callsign of ZK1MA. (GB2RS)

9V1SM is Sasi, a new operator from Singapore. He is active on all bands from 40 to 6 metres, mainly on SSB. He also plans to start PSK-31 operation in a few week's time. (RSGB)

Lastly, the new address for the ARRL W 5 Incoming QSL
Bureau is O.K.D.X.A, PO Box 2591, Claremore, Oklahoma 74017-2591. If you have cards for W-5 land, send them there. (ARRL)

**

THAT FINAL ITEM:

WITH THE SCOUTS: JOTA THIS WEEKEND

This weekend, the 19th and 20th of October, is the scouts Jamboree on the Air, or JOTA. Bruce Tennant, K6PZW, tells us what its all about:

--
The Jamboree on the Air is an annual event. Every October a half a million Scouts and Scout Guides all over the world take to the airwaves to make contact with each other by means of Amateur Radio.

The World Scout Bureau owns and operates its own Amateur Radio station. The the call sign H-B-9-S and it operates from a permanent radio room located in its offices in Geneva Switzerland. The station normally operates during Scout Nets and other major scouting events like the Jamboree On The Air. This year, the station is active on 160 through 10 meters in a number of languages.

Here in the United States, the big JOTA gathering takes place at Camp Wisdom near Dallas, Texas. The call sign to listen for from there is K2BSA slash 5. Other stations expected to take part include GB2GP in London England and JA1YSS from Tokyo Japan.

If you are hearing this newscast before or during this years Jamboree on the Air, get on the air and show your support of the worlds youth and of scouting by making contact with a J-O-T-A station. Who knows, it could evenb be HB9S.

For the Amateur Radio Newsline, I’m Bruce Tennent, K6PZW, in Los Angeles.
--

Again, this weekend, the 19th and 20th of October, is the 2002 Scouting Jamboree on the Air. And if you are hearing this newscast later in the week we hope you had time to contact a Jamboree station. (ARNewsline™, Q-News, GB2RS)

Rigid "compared to some other radio services." A relative comparison, Jim. Few in most other radio services are required to know as much about radio as we're expected to know. For example, we must be aware of the frequency limits of the bands we use while others simply buy a certified radio with channels and go. Likewise, our equipment is expected to perform in a certain manner (harmonics, etc), while users of some other radio services are likely totally oblivious of such things. We're personally responsible for our radio activities, while the cop on the street, for example, is not (his department may be, but not the cop personally unless he does something really outrageous - so far out that his actions become an FCC issue, not a departmental issue).

True, we gain immense freedoms in exchange for complying with those rules, but that doesn't change the "relatively" rigid nature of them. And I certainly don't think they are overly rigid relative to our activities within the Amateur Radio Service. Considering our activities, the rules have to be spelled out clearly.

No dispute, Larry. However, even you must agree that certain groups of people are "more likely" than others to fit comfortably within the Amateur Radio Service. For example, "outlaw" CB'ers would not likely fit well in ham radio, especially without being willing to give up the illegal activities in and around the CB band.

> No, the premise was self-serving. Ryan is
> obviously involved in firefighting, and
> naturally sees firefighters and other
> emergency services workers as potentially
> brilliant ham radio operators.

No, he is self-aware. Since he is involved in firefighting, he does naturally see his fellow firefighters as good potential ham operators. Just like I think most Coast Guard personnel would be good ham operators - the type of people I'd like to see in ham radio.

> Unfortunately, this is simply not true. People
> who are professionally engaged in emergency
> services are no more likely to be good, rule-
> abiding hams, and no less likely to be loose-
> cannon LIDs, than potential hams from any other
> profession.

Nonsense. Based on my experience, those who serve the public, either paid or as volunteers, are far more likely to be law-abiding in every regard and far less likely to be loose-cannons in any regard. Yes, while there are always exceptions, the exceptions are far fewer than in some other groups.

> I'm no more enthusiastic about them as a group
> of potential hams than I would be of librarians,
> mailmen, construction workers, or anyone else.

Nobody is talking about excluding one group over the other, Larry. Of course there are good librarians, mailmen, construction workers, and so on. Indeed, I think most people are fundamentally good. But, as long as public service is a cornerstone of ham radio, those with a background in public service have unique experience to bring to the table.

That's because we are both operator AND "technician". Those other radio services have a bench tech who is responsible for making sure the radio is on the proper frequency, operates at a certain power, and otherwise maintains it's operating parameters.

>Likewise, our equipment is expected to perform in a certain
>manner (harmonics, etc), while users of some other radio services are likely
>totally oblivious of such things.

The "users" may be, but they are still responsible for making sure thier stations operate within the parameters of their license. So they have to pay someone to make sure those requirements are met. We are responsible for our own.

>True, we gain immense freedoms in exchange for complying with those rules,
>but that doesn't change the "relatively" rigid nature of them.

I think the rules are particularly lax, myself. If one reads Part 97 at length, there are really very few technical standards set for us. The rest is "good Amateur practice".

>Considering our activities, the rules have to be spelled out clearly.

They're not?

You're not alone, Brian. I think Larry and his ilk are exactly why this radio service will never grow larger than what it is and may actually decline in the future. Few are willing to stay and put up with the almost endless negative comments and harassment, and even fewer are willing to invite their friends to join only to have them experience this nonsense for themselves.

Sadly, this radio service is never going to rid itself of people like Larry. As long as they can find one supporter, one person who laughs at their harassment, they will continue to do what they're doing. And, because of that, I don't have high hopes for the future of this radio service.

I just read Title 47, Sec. 2.815, of the United States Code of Federal Regulations (47CFR2.815), which prohibits the sell of "any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz. For more information, see... (scroll down to 2.815)

http://www.access.gpo.gov/nara/cfr/waisidx_01/47cfr2_01.html

Of course, paragraph (d) excludes selling by "a licensed amateur radio operator to another licensed amateur radio operator."

This regulation seems fairly clear, but I see ham operators routinely selling amplifiers on auction sites and ham fests without any obvious attempt to verify the license status of the buyer, so perhaps I'm missing something.

1. Do we have a legal obligation to verify the license status of the person we sell in amplifier to? This regulation applies to the seller, not the buyer, therefore the seller would be in violation if an improper sale is made.

2. What verification is required? A photocopy of the buyer's license? A callsign that matches the name of the buyer? The person's word?

3. What are the consequences if we violate this regulation by selling an amplifier to an unlicensed person? For example, could a person lose his or her ham license? Are there greater consequences?

4. Are those selling amplifiers on auction sites and fests without any verification of the buyer's license status just not aware of this regulation or are they simply ignoring it?

YEAH...YEAH...YEAH...
Yada...Yada...Yada...

Ban has been in place for Years but that
hasn't stopped me seeing one or two
of them for sale at virtually everh hamfest
I been to, and at weekend flea markets
in the Pa.NJ NY area. All you have to
do is sell them "for test bench signal amplifier
purposes" as a kit and the FCC can't touch
you. For an example see:

http://www.cbcintl.com/TriPower.htm

Know what also? I have NO PROBLEM with
these kind of sales. Their NOT illegal and only
hams with inflated egos seem to get upset
and like to play "radio cop" when such products are
marketed. There's alot other things to worry
about (like the looming loss of 440 mHz) that this stuff folks.

2027. Ham Radio Public Service -- Who Are We Kidding?

Newsgroup: rec.radio.amateur.policy

In article <B9D7E04C.BF13%stewart@sc.rr.com>, Dwight Stewart
<stewart@sc.rr.com> writes:

> Nobody is talking about excluding one group over the other, Larry. Of
>course there are good librarians, mailmen, construction workers, and so on.
>Indeed, I think most people are fundamentally good. But, as long as public
>service is a cornerstone of ham radio, those with a background in public
>service have unique experience to bring to the table.

Dwight:

Public service is the "cornerstone of amateur radio" only in the minds of a
bunch of Ham Hero™ wannabes who have seen too many episodes of
"Emergency" and "Third Watch." Those who are involved in public service
in their local area are very jealous of their "position" within the voluntary
public service community, are unwilling to share any of the "action" with
other hams interested in learning what they are doing and doing it
themselves, and they are afraid of losing their "insider" status among the
paid public service professionals they "work" with during "emergencies."
They jealously refuse to take a break, and will sit in the chair at the EOC
ham radio station for 24 hours straight, 2-meter mic firmly death-gripped,
just to make sure THEIR ass IS the one in the chair.

It's all about glory and recognition for a few; not hard work and dedication
of the many. In most cases, ham radio operators who come out of the
woodwork during "emergencies" (usually bad weather nowhere near
disaster-causing proportions) make total fools out of themselves on-the-air
by reporting things that have no need to be reported. Invariably, these
are hams whose entire life as a ham is spent on a local repeater -- and
have no outlet for their desire to communicate other than making a
nuisance of themselves.

There probably are some public service oriented hams out there who have
their hearts and minds in the right place, but in my 20-plus as a ham, I
haven't met very many of them. I've probably just been unlucky to always
have been exposed to the negative type. From what I have heard and
read, my experience is hardly unique, either. I think that what is needed
is some functional reform of the ARES system. I believe that Section-
level "emergency communications" appointments should be "term-
limited" -- i.e. EC, SEC, DEC, etc. would only be permitted to serve in
that capacity in their section for, say, three years, max. I recognize that
in some smaller sections (like Delaware), that may not be a good solution,
since few people want to take the jobs. In that case, we'll just have to
do without "leadership" in the ARES. I think we'll survive.

Under real circumstances where individual hams, regardless of what kind of important-sounding title they hold, are faced with a real world emergency, they will be way too involved in dealing with their personal and family crisis management to even be able to think of separating themselves from their personal obligations and sit at some Red Cross shelter passing traffic -- unless they just end up there as a natural result of the event itself. Whether they will end up there with everything they need to communicate will be another matter. I can just imagine some hysterical XYL shrieking to her OM as he calmly displaces valuable space for Pampers and baby formula in the SUV for a generator and a full-capability ham radio station. Like, that's really gonna happen, isn't it!

If any area gets hit with the Real Thing in a Really Bad Way, ham radio "emergency communication" isn't going to be anything like anyone has planned it to be. And it very likely won't involve anyone who was trained and "exercised" in providing these "cornerstone" ham radio services. It will be spotty, catch-as-catch-can, disorganized, chaotic, a QRM-fest of immense proportions, and generally ineffective and lacking in credibility with those professional emergency services personnel who would be interacting with the hams. It will be a disaster within a disaster.

Unless and until we find a way to eliminate the Ham Hero mentality, get more rank-and-file hams involved in ARES, spread out the "stick time" actually serving in the communications "hot seat" during exercises and real local emergency activations, and develop an attitude of totally eschewing personal recognition for those who "serve," will ham radio BEGIN to become a credible resource for emergency communications. Right now, we're not even close to being there.

What turnip truck did you fall off of? Hams have been in public
long before 'Emergency' and 'Third Watch', even long before
television. Public service has been a long tradition of ham radio.

You have such a negative attitude about your fellow hams, perhaps
you would find you fit better with the cb crowd. That would
probably raise the IQ of both groups and the ham community would
not miss you.

Dick:

Actually, it's a riot! However, I believe the "laugh" will be on the ARRL -- when those $75 - $5000 donations fail to arrive! I just wonder how the ARRL HQ staff is going to cover up the abject failure of this program?

OBTW -- It will be interesting to see if all the Division "officials" will be sporting the higher-level (Silver, Gold, Platinum, Director) Diamond Club pins on their blazers at hamfests, ARRL Forums, etc.

> a difference in how users behave?

It completely transforms the nature of the service - when the users can
move between a relatively large number of channels it makes it much easier
for them to make random contacts with people they don't already know, viz
the difference between CB and GMRS (as they existed before they allowed
GMRS users to use the interstitial channels and then grafted FRS onto the
same frequencies)

I beleive that the theory tests should cover everything (within reason),
but leave people to learn the practical part by doing it. Why is there a
practical test only in CW? The point is CW is treated differently than
anything else.

>
>>Actually, I think that theory tests should cover all modes

> main advantages of SSB use by hams were:
>
> - More simultaneous voice QSOs in the same bandspace
> - Near-elimination of carrier heterodyne interference
> - Lower cost of high-power voice transmitters

You missed out the huge improvement in signal-to-noise, due to all the signal envelope carrying modulation as well as just the bandwidth reduction. 100 watts of SSB gives the same signal in the receiver as 900 watts of AM!

>
> But SSB brought with it several disadvantages:
>
> - Loss of fidelity and the personality of voice characteristics

Only because (1) it gave some advantage to cutting the audio below 300 Hz, whereas with AM that didn't reduce bandwidth, and because (2) it enhanced the effect of compression (see above, compression on AM doesn't compress the carrier), leading some people to go too far

> - Greatly increased complexity of equipment, reducing the practicality
> of homebrewing

But I wouldn't like to price up a big modulation transformer these days
for building a high power AM rig

> - Higher cost of low-power voice transmitters
> - Isolation of HF amateur voice operation from SWLs, reducing the
> recruiting possibilities.

Some truth in that, although if they had a communications receiver it
already had a BFO for receiving CW. All they had to do then was switch on
the BFO whilst in AM mode.

>
>> As a matter of fact, as we both know, it was

> probably never use, but NOT OK to require a simple Morse test?

But the CW test is the only practical test - all the rest is theory. Why
do we need a practical test on this only. Not that I think there should
be, for example, a soldering test (although some people have been known to
say that)

>>
>>>> Wouldn't that be CB?

True, although I bought a PLL kit once, and theoretically I could still
build a nice synthesized rig using it

>

>
> about the performance of HF receivers. Turns out the winner does not
> have DDS, PLL or DSP technology.

That's really no surprise to me. Each of those methods introduces noise
into the frequency source, or into the receiver in the case of DSP. With
DSP there's another issue as well. There's no substitute for tight
filtering at a reasonably high IF. Filtering later lets the receiver get

overloaded by signals that would have been filtered out before they got
that far. Modern rigs do things digitally to give us more control, and to
do it in software without paying for hardware. I agree that the RF
performance may not be enhanced, but it has improved for other reasons,
like low-noise MOSFETs

>

>Subject: Ham Radio Public Service -- Who Are We Kidding?
>From: yodoc@aol.comnospam (Larry Roll K3LT)
>Date: 10/20/02 1:09 PM Central Daylight Time
>Message-id: <20021020140900.06896.00004244@mb-mv.aol.com>

>Public service is the "cornerstone of amateur radio" only in the minds of a
>bunch of Ham Hero™ wannabes who have seen too many episodes of
>"Emergency" and "Third Watch."

Sorry, Larry. You got this one wrong....WAY wrong...

>Those who are involved in public service
>in their local area are very jealous of their "position" within the voluntary
>public service community, are unwilling to share any of the "action" with
>other hams interested in learning what they are doing and doing it
>themselves, and they are afraid of losing their "insider" status among the
>paid public service professionals they "work" with during "emergencies."

Unfortunately this sounds a bit sour-grapeish. I am involved in several
public service activities and no where am I aware of the attitudes you suggest.

Furthermore, I have been a member of EMS and VFD in your area, and never
knew of that kind of attitude there, either. As a matter of fact. some of the
finest, most well developed programs, including ARES are in the NE Corridor.

>They jealously refuse to take a break...(SNIP)

Perhaps you meant "selflessly"...?

>...and will sit in the chair at the EOC
>ham radio station for 24 hours straight, 2-meter mic firmly death-gripped,
>just to make sure THEIR ass IS the one in the chair.

OK. Lennie...I mean Larry...we've heard THIS from you before.

>It's all about glory and recognition for a few; not hard work and dedication
>of the many.

Perhaps because it usually is the FEW that do MOST of the work, Larry.
Participate in SET, organize drills with the ARC, help equip the local EOC,
routinely volunteer to be Net Controls, etc...

I am reminded of the "tale" you related a few years ago about allegedly
seeing a "ham" stopping at the scene of an accident "...madly jabbing away at
his HT while running to the rescue". Very cynical.

You have a real issue with first responders and other emergency service
providers, don't you?

>Invariably, these
>are hams whose entire life as a ham is spent on a local repeater -- and
>have no outlet for their desire to communicate other than making a
>nuisance of themselves.

...And some do it on internet newsgroups by insulting people who try to make a difference. Some successfully, some not...but they try.

>There probably are some public service oriented hams out there who have
>their hearts and minds in the right place, but in my 20-plus as a ham, I
>haven't met very many of them.

In my almost 30 years (October 27th...yea me!)...I have met legions of them.

And if you "haven't met very many of them", then I contend that your scope of reference is very limited. There are tons of them out there. Even in Deleware.

> I think that what is needed
>is some functional reform of the ARES system.

Then you've not been paying attention lately, Larry.

>I believe that Section-
>level "emergency communications" appointments should be "term-
>limited"

Term limits, whether in Amateur Radio or "real" politics are the crutch of the lazy and the irresponsible. Term limits breed mediocrity. Are YOU mediocre, Larry?

>In that case, we'll just have to
>do without "leadership" in the ARES. I think we'll survive.

I think that's pretty stupid...espeically from a former senior NCO and a person as allegedly educated as you purport to be, Larry. Where do you get this stuff? Mao's little Red Book?

>Under real circumstances where individual hams, regardless of what
>kind of important-sounding title they hold, are faced with a real world
>emergency, they will be way too involved in dealing with their personal
>and family crisis management to even be able to think of separating
>themselves from their personal obligations and sit at some Red Cross
>shelter passing traffic...(SNIP)

I think that's a pretty callous, shallow and selfish statement, considering that tons of contradicting evidence, especially in the last year, exists.

>I can just imagine
>some hysterical XYL shrieking to her OM as he calmly displaces valuable
>space for Pampers and baby formula in the SUV for a generator and a
>full-capability ham radio station. Like, that's really gonna happen, isn't
>it!

Do you make this stuff up yourself, or does someone ghost write for you?

>And it very likely won't involve anyone who was trained
>and "exercised" in providing these "cornerstone" ham radio services. It
>will be spotty, catch-as-catch-can, disorganized, chaotic, a QRM-fest of
>immense proportions, and generally ineffective and lacking in credibility
>with those professional emergency services personnel who would be
>interacting with the hams.

And since you have uttered this bitter, cynical vision of the future, the rest of us will just quit trying...OK, Larry?

And by the way...I will reiterate for you (usually saved for the West Coast Idiot) the FACTS as related to in the Federal Register...The Department of State, FEMA, the Department of Defense and other federal agencies do NOT share your bitter, self-flagellating view of Amateur Radio.

> It will be a disaster within a disaster.

Then why don't you just submit K3LT for voluntary revocation right now, Larry, and save yourself the embarrassment-by-association?

>Unless and until we find a way to eliminate the Ham Hero mentality...(SNIP)

Now I am convinced...either Lennie has hijacked Larry's account, or Larry is a bit lighter in the saddle than I gave creedence to in the first place.

>...get more rank-and-file hams involved in ARES...(SNIP)

Shall we institue the draft to Amateur Radio, Larry?

>...spread out the "stick
>time" actually serving in the communications "hot seat" during exercises
>and real local emergency activations...(SNIP)

I think THIS says it all...Larry has offered his infinite wisdom in "emergencies" to agencies with which he has not previously trained or served, expecting to be immediately placed in a position of authority or responsibility, only to find that he was told "no thanks".

>....and develop an attitude of totally
>eschewing personal recognition for those who "serve," will ham radio
>BEGIN to become a credible resource for emergency communications.

Ahhhhh! LARRY IS A SOCIALIST! Everyone gives/gets no more/no less than the next guy. To hell with personal initiative, sacrifice and service.

>Right now, we're not even close to being there.

Let's hope we never get close to what YOU envision, Larry. THAT will be a really sad day.

Steve

He needed to get some real world experience of what working on HF is
like.... Just how is he busting pileups on 20 with a 100W rig? Better voice
processing maybe with DSP?

And maybe the sense you get when talking with the buyer to see if
he seems to actually know something about ham radio and not
psudo-knowledge CBers tend to have.

For #2: Indicating that you will ONLY send the item to the buyer's address as listed in the FCC's database pretty much will take care of the amateur-to-amateur exception to 47 CFR 2.815 (found at 47 CFR 97.315(b)(4) or (5)).

You think so? There was a vendor sell HF amp kits at Dayton a year or
two ago. The Detroit FCC, part of their area is Ohio, paid them a vist
out in the tent area, at the far end of the flea market. Guess what?
They, the amp kit vendor, haven't been back to Dayton since.

Not all cops, firefighters and EMS personnel are of that mentality.

The vast majority of hams have no problem
> following the rules and regulations, so this is a totally invalid concept,
> AFAIC.

If you are working a disaster or emergency scene, I would hope that you
don't "freelance" and follow your own direction. This is assuming that you
do participate in emergency communications. Based on your statement, you do
not wish to have people follow any rules?

> Police, firemen, EMT's, etc. have their own professional communications

Never said anything about them using our frequencies..... Just stating that
they would be a good group to recruit from. Most of the "Ham HeroT" types
typically have not had anything to do with the emergency services anyhow.

Like I said in response to Dwights comments.... People in that structure
(Emerg. Services) as well as people in the Military are used to following
rules, orders, processes, policies etc.. Therefore I believe that a good
percentage (obviously not all of them.... no group is totally perfect) of
them may have the aptitude to be a positive addition to our ranks.

> >His
> >premise is that a person with that type of background (experience with

There is a darn good chance that the average (from the area I live in at least) that the Emerg. Services groups are not going to be on any CB radio..... Especially acting in the manner that disgraces the 11 meter band so bad.

Also.... they may also serve as instructors for "some" of the different training programs applicable to us. We have a group near me that assists in Search and Rescue (more on the search side) that help walking lines with other firefighters/cops when a search for a lost senior citizen or child is needed to be done. They are not trained to be a paramedic or EMT, but are walking with someone who can respond in an EMS capacity, and are at least trained in CPR/First Aid to assist those trained in EMS. Granted this is not necessarily at the roots of our "business" for lack of better terms, but it definitely does give more visibility for us. I have ran into cops/firefighters/ems workers that had never heard of ham radio.... till they work with someone that is a ham.

>

Can't give a hoot about something you have never heard of..... 95% of the under 21 crowd that I have dealt with regarding amateur radio, had absolutely no clue it existed before our meeting. They know now, and some have pursued further research.... and some have not.

One huge amount of competition for the kids I have run across, (the ones actually doing something good with their lives) are involved in school activities, sports, or working whatever the legal amount of hours they can work, and the competition for time is tough for us to break into their lives.

Granted, someone here will definitely make some kind of link to the negative/bad kids but I wasn't.

The main point is that there needs to be more along the way of promotion, instead of just keeping it to ourselves. This means that alot of hams, from the local level all the way up to the ARRL (and other organizations) are guilty of not promotion the hobby. At the school level is the most ideal level to incorporate the hobby.

Good Morning....

it's 8:30a.m. EST. and I am listening to 3975.60 and I was hearing something kind of amazing, I was hearing a Christian Net of some sort on this frequency, I am assuming that it originats from California somewhere, because I was hearing mostly 6-landers and 0-landers... Not real strong here, but I could make calls and the fact that they were reading from the bible.

I guess the Winter Time Band conditions are coming finally.

73 to all

-Chuck K8CPA

P.S. Does anyone know which net this is???? I've never heard them before.

P.P.S. I usually meet with some Michigan Hams on 3976 Khz in the mornings and afternoons everyday, why I was listening here...

>What in the world does "following a chain of command" or "following orders"
>have to do with Amateur Radio?

If you are in an ARES or other emergency programs, it means everything. Taking it upon yourself to interpret traffic or to try and inject what you "think" the message is supposed to be is wrong. Taking it upon yourself to go in a disaster area to where YOU think you are needed, rather than where the IC thinks you are needed is foolhearty also. That's what get's people labled as "Rickey Rescue".

>Any fellow ham who tries to "command"
>me or "order" me usually gets told which bus to take, and precisely where
>to get off!

I have absolutely no doubt that this is exactly so, and that on some previous occassion you showed up at an "emergency", expected to be immediately enthroned as leader, and when that didn't happen, you decided to take your ball and go home.

The rest is history.

>Some kind of self-styled Sgt. Rock is precisely what the ARS
>has no need for whatsoever!

"Sgt Rock"...?!?! No. Effective and flexible leaders? Yes!

>Police, firemen, EMT's, etc. have their own professional communications
>systems which give them precisely the capability they need, when they
>need it, with adequate backup and emergency reserve capability.

Oh? You get this tidbit from what source, Larry? Were you at Ground Zero last year? Seems that everyone EXCEPT Amateur Radio operators had a problem. And that does NOT come from any "Amateur Radio" media sources.

>If they
>do get involved in amateur radio, it should be because they're attracted to
>it for purely hobbyist purposes such as DX'ing, contests, rag chewing,
>and the like.

Bravo Sierra, Larry...PURE Bravo Sierra. Nothing more than YOUR opinion, which, along with a fin, will get you an over priced cup of coffee at Starbucks.

>They shouldn't have any need, desire, or use for Ham Hero™
>status, and if I were one of them, the last thing I'd be doing is encouraging
>other hams to stick their noses in my business as an emergency services
>provider.

But you're NOT an "emergency services provider". Nor are you, by evidence of your posts, a qualified or participating member of ARES or other recognized PS program. Probably a good reason to stay at home or to stay on your bus when trouble happens. Those of us qualified to do so will lead you, along with the women and children, to safety.

Obviously in your "twenty plus years" of Amateur Radio licensure, Larry, you have not gained any appreciation for what Amateur Radio is or can be...and that is NOT just one thing to any one person.

Amateur Radio can be all those hobby-related passtimes you cited, but it is also a resource to emergency agencies nation wide. It is also a vast playground for many who choose to experiment or learn.

Trying to say that Amateur Radio is "just" for hobby pursuits is like saying only redheads are "real" women. It just ain't true.

Weooo, Larry! You have something in for public service for sure! I help out at every Public service event our club has. I could care less about any recognition for it. It's a way of giving back to the community.

Also your view of PS is a little narrow. It isn't just setting in front of a mic during emergencies. Helping with charity events and non profit groups is just as important a form of PS.

> It's all about glory and recognition for a few; not hard work and dedication

> shelter passing traffic -- unless they just end up there as a natural
> result of the event itself.

Of course, that just might be what happens. No one is expecting the ham do sacrifice his or her family to sit in front of a mic. The reason to have lots of hams trained in emergency ops (yes even Field Day) is so that if an emergency happens, *some* ham, somewhere, will be able to get communications into and out of the area.

The ham in the emergency area is much more important than the
multitudes that work outside the emergency area.

Whether they will end up there with everything
> they need to communicate will be another matter. I can just imagine
> some hysterical XYL shrieking to her OM as he calmly displaces valuable

> full-capability ham radio station. Like, that's really gonna happen, isn't it!

Not likely, but that is a pretty strange scenario to be sure. More
likely, some disaster will happen, and some ham will have a station
ready to go at home wilth emergency power and will then serve as a relay point.

> If any area gets hit with the Real Thing in a Really Bad Way, ham radio
> "emergency communication" isn't going to be anything like anyone has
> planned it to be. And it very likely won't involve anyone who was trained
> and "exercised" in providing these "cornerstone" ham radio services.

Yup, that is why it's incumbent upon all hams to be prepared at some
level to help. Disasters are inherently random, and who knows who will
be able to help.

> will be spotty, catch-as-catch-can, disorganized, chaotic, a QRM-fest of
> immense proportions, and generally ineffective and lacking in credibility
> with those professional emergency services personnel who would be
> interacting with the hams. It will be a disaster within a disaster.

I don't think so. First, in the disaster area, there won't be all that
many operators. Second, I give hams better credit than that - I don't
think we'll lose all our discipline. Third, even our local Sunday
ARES/RACES net is a form of training for coverage and operations
protocol. Field day is a form of training for emergency operations.

> Unless and until we find a way to eliminate the Ham Hero mentality,
> get more rank-and-file hams involved in ARES, spread out the "stick

> BEGIN to become a credible resource for emergency communications.
> Right now, we're not even close to being there.

I think you are letting the few dorks get you all spun up, Larry! There
are idiots in all the services. But "Illegetimi non carborundum, I say.

You do have a good point about getting the rank and file more stick
time in practice and real emergencies.

Heh - heh - maybe we ought to call Lloyd "Big Mac" from now on. With
his interminable good cheer and jolly aspect, he strikes me as being
about as buoyant as anyone.

Larry, speaking of "Ham Hero? wannabes," I recall an episode RRAP Blue where a 3-land Extra set up his own Simulated Emergency Test (SET) and no-one came.

Thus Ham Radio is declared "merely a hobby" by this disappointed wannabe.

From: Craig Petersen <n7uqa@arrl.net>
Message-ID: <3DB4799A.BD9A18C7@arrl.net>
Source record: 53879

I for one am getting really sick of this problem. If the ARRL wants to provide a e-mail remailing service the sysadmins need to get off their duffs and keep spammers from using the remailing server. One way is either to have them switch to "mailman" or get them to edit the access file in sendmail to block domains used by spammers.

I operate a mail server at home and had to resort to draconian measures to stop most of the spam I get. As a mater of fact "userline.ru" is blocked by my mail server, but it's a little difficult to block spam when it's being forwarded by a server that I allow to pass..... go figure.

"Chain of command" et al can be as simple as following the instructions of a net control station. Sounds simple, but without it things come unglued pretty rapidly.

>hams.....

Yawn! No, Ryan, that's NOT what I said! I guess it's what YOU wanted
to SEE me saying, so you said it for me. I'll try one last time.

You obviously have an axe to grind with firefighters and other emergency
services personnel since you (presumably) work within that field, or serve
as a volunteer firefighter, or whatever. You haven't said, but there is that
implication, so whatever your reality is, I'm just going by what I've seen.
In this way, I guess it's natural for you to view firefighters as being better
suited to be hams than people from other walks of life. However, this
viewpoint is self-serving, in your case, and not necessarily true. In fact,
it is highly likely that the fire houses of America are full of all the exactly
WRONG people to be hams. This is why I stated that if a firefighter,
for example, was attracted to ham radio for the "usual" reasons --
technical advancement, DX, contesting, rag chewing, and not necessarily
as an extension of what he is doing as a firefighter, then he/she is more
likely to be a good ham. If all he wants is another HT hanging from his
belt, and another opportunity to swing a mic to his mouth and respond
to another emergency (real or manufacturered), then he is not what I'd
call a good ham, and I wouldn't necesarily be making an effort to "recruit"
him to the ARS.

Prolly 90% of the over-21 crowd is in the same boat.

>They know now, and some
>have pursued further research.... and some have not.

Maybe 2% will be interested. That's a lot of new hams.
>
> One huge amount of competition for the kids I have run across, (the ones
>actually doing something good with their lives) are involved in school
>activities, sports, or working whatever the legal amount of hours they can
>work, and the competition for time is tough for us to break into their
>lives.

Very true. One of the ways parents try to keep kids out of "trouble" is to hook them up with all sorts of organized activities. Sometimes too many organized activities.

>The main point is that there needs to be more along the way of promotion,
>instead of just keeping it to ourselves. This means that alot of hams, from
>the local level all the way up to the ARRL (and other organizations) are
>guilty of not promotion the hobby. At the school level is the most ideal
>level to incorporate the hobby.

All true, and something to keep repeating. Amateur radio ties into the curriculum in many ways - math, science, geography, history, computers, communications, and much more.

Good observations, Ryan.

That would mean that there are now 24 thousand "extra lites"
out there (I'm one of those). :-)

That's about 24%, and the fact that we put in for and got it
means that we are likely to be a higher percentage of active
on the air extras, at least on phone. I imagine a few of us
can be found on the 20+wpm CW QSOs and nets....

Brian:

I wasn't disappointed one little bit. I was hoping that I'd be proved
wrong about what I'd been saying about the dumbing-down of licensing
requirements, but unfortunately, I wasn't that lucky. If even one
person
playing "radio cop" had answered me saying I wasn't authorized to
conduct
my own "simulated emergency test," I would have declared the experiment
a success. However, that didn't happen.

BTW -- do you think there was anything illegal about what I did? I'd
like to hear your point of view.

> yet more board space to solder it into.

The Kachina has a 50Hz filter, so does my NRD-545 and I've run dx with
'em both on 40 cw. Both of those so-called 50Hz DSP filters SUCK out
where the rubber hits the road.

Actually, here's yer opportunity to become a real ham hero.
"Synthesize" a plug-in 500Hz 455Khz filter with a 60dB down shape
factor of 1.3 for lameass old CW which plugs into . . um . . a 75A4 or
a meatball 75S3B or an FT-1000MP or . . take yer pick. And which has a
real-time response @ 50wpm. OK, OK, jeez, I'll give ya 3ms for
processing time. Gets down to put up or shut up and all that.

> >w3rv
> >
> >Hey Leland, what's the blocking dynamic range of yer laptop on 40cw?

My moded 75A4 had a *measured* BDR of 110dB @ 7.0Mhz. In 1960. Whatta
leap . .

> I
> don't mind adding analog stuff in front of it, however.

Dayum, I'm glad you don't mind those analog parts . . whew . . I
thought for a minute there . .

Finally -- someone who "gets it." The problem is, in every club I've
been
involved with, ALL (meaning 100%) of the "emergency service" hands-on
operating is done by a tightly-bundled, exclusive, not-to-be-intruded-
upon group of long-time entrenched hams who have always "been there done
that." There is absolutely no room for any newcomers -- no need to take
a break, no need to take a "shift" -- no need for anyone but THEM. This
is probably why, when some kind of minor (usually weather related)
situation
arises, new hams with a burning desire to do SOMETHING related to
providing
Public Service act like a bunch of hopelessly clueless wannabes --
because
that's all they'll ever be. They have no way to break into the core of
the local Public Service group unless someone who's been there all their
life goes SK -- or gets a job, maybe!

> The ham in the emergency area is much more important than the

> ready to go at home wilth emergency power and will then serve as a relay point.

If that's the case, it wouldn't be much of a local emergency, IMHO. I'm
talking
major disaster here -- earthquake/hurricane class -- something that
causes widespread
evacuation from homes -- including those of the Public Service-minded
hams.
What "emergency" capabilities are available at home are, also IMHO,
irrelevant to
anyone who considers him/herself "prepared" as a ham.

> > If any area gets hit with the Real Thing in a Really Bad Way, ham radio

> be able to help.

Right. And with ARES groups the way they are in most areas, for the
most part,
this public service emergency communications capability we tout so
heavily as
our reason for hoarding billions of dollars worth of valuable spectrum
just
doesn't exist.

> > will be spotty, catch-as-catch-can, disorganized, chaotic, a QRM-fest of

> ARES/RACES net is a form of training for coverage and operations
> protocol. Field day is a form of training for emergency operations.

I'm guessing that in a lot of places, real-world emergency comms are
going
to be carried out by hams who have never participated in an ARES/RACES
net in their lives -- but just happened to be lucky enough to survive
the
disaster with their comm capability intact.

> > Unless and until we find a way to eliminate the Ham Hero mentality,

Most likely because you are one of the long-term, accepted, "insiders."
You're not a new ham trying to break into Public Service, but have
nowhere
to go and nothing to do once you get there.

> Furthermore, I have been a member of EMS and VFD in your area, and never
> knew of that kind of attitude there, either. As a matter of fact. some of the

Well, I've not encountered anything of the sort in the MDC or DE
sections. WNY
is probably a bit better, but it still has the same problems of there
being
no room for newcomers.

> >They jealously refuse to take a break...(SNIP)
>

> mediocre, Larry?

No, Steve. Lifetime incumbency breeds the contempt which comes from
familiarity,
and the tendency to be responsive to special interests rather than the
needs
of the public. Term limits make sense in politics, and they would make
more
sense in the ARRL Field Organization's emergency service appointments.

> >In that case, we'll just have to

Not at all. It comes from having a charactistic which is increasingly
lacking in people today -- common sense.

> >Under real circumstances where individual hams, regardless of what

> considering that tons of contradicting evidence, especially in the last year,
> exists.

I'm sure the hams who participated in 9/11 managed to find some way to
make themselves useful, Steve. Some a lot more than others, but a lot
of
them, I dare say most of them, probably had more of a tendency to get in
the way than provide any meaningful COMMUNICATIONS support. If they
did something not involving communications, but had a HT clipped to
their
belt, they don't count in what I'm talking about here.

> >I can just imagine

> expecting to be immediately placed in a position of authority or
> responsibility, only to find that he was told "no thanks".

No, I was relating my personal experience that newcomers to LOCAL
emergency
service are typically left with little or nothing to do to gain acutal
operating experience during exercises/drills or the occasional "actual"
scenario. It's about the entrenched long-timers displacing newcomers.
It's
as simple as that -- and it's a big problem, IMHO.

> >....and develop an attitude of totally
> >eschewing personal recognition for those who "serve," will ham radio
> >BEGIN to become a credible resource for emergency communications.
>
> Ahhhhh! LARRY IS A SOCIALIST! Everyone gives/gets no more/no less than
> the next guy. To hell with personal initiative, sacrifice and service.

No, it's about sharing the hegemony in local ARES groups, nothing more, nothing
less. It's about the fear of the long-timers of being displaced, therefore
losing their "position" and whatever "glory" they think they're getting from
it.

> >Right now, we're not even close to being there.
>
> Let's hope we never get close to what YOU envision, Larry. THAT will be a
> really sad day.

From my POV, Steve, we've been there for a long time. All I'm doing is
trying to advocate change, and to stimulate a meaningful discussion. All you
seem to be doing is trying to find what you're looking for -- another ham
to bash they way you do Lennie.

Horsepucky. Emergency comms is only one subset of ham radio public
service activities. Ask the thousands of military personnel stuck in
crappy places if their phone patches home constituted a "public
service". Take it into the sphere of education and there is no end to
the list. Your brush is far too wide.

My inclination is to agree that ham radio as it exists today is and
will not be a big player at the front end of emergency comms, i.e., in
any real-time life & death scenarios except in very oddball isolated
instances. We can't touch the training, experience, discipline and
infrastructures the profesionals bring to that end of the game. But
then comes the volumes of logistics and H&W traffic which is not the
"emergency comms" you're dissing . . Yeah, those are public service
activities during emergencies too Larry.

>You obviously have an axe to grind with firefighters and other emergency
>services personnel since you (presumably) work within that field, or serve
>as a volunteer firefighter, or whatever.

Judging by YOUR posts, Larry, one could say the same thing about you and
Amateur radio. What's up with that...???

>You haven't said, but there is that
>implication, so whatever your reality is, I'm just going by what I've seen.

>This is why I stated that if a firefighter,
>for example, was attracted to ham radio for the "usual" reasons --
>technical advancement, DX, contesting, rag chewing, and not necessarily
>as an extension of what he is doing as a firefighter, then he/she is more
>likely to be a good ham

Bravo Sierra. WhatEVER reason brings them to Amateur Radio is fine. They
can lean about the rest as they go, just like you and I did. They are no more
or no less likely to be a "good ham" based upon HOW they came to Amateur Radio.

>If all he wants is another HT hanging from his
>belt, and another opportunity to swing a mic to his mouth and respond
>to another emergency (real or manufacturered), then he is not what I'd
>call a good ham, and I wouldn't necesarily be making an effort to "recruit"
>him to the ARS.

More cynicism, Larry? Whew!~

You should know me well enough by now to know I don't often chase molehills, Hans. This started as a discussion with an eBay employee, with questions I could not answer. Rather than just give my opinion, which the employee would probably be satisfied with (it's just a friendly discussion on this issue), I thought I would see what others thought.

Besides the nuisance when living next to one of these CB'ers running an illegal amplifiers, there is a direct price on ham radio. Most in the country do not know the difference between ham radio and CB. All they know is that neighbors with antennas often interfere with their phones and televisions. As a result, these CB'ers give the reputation of ham radio a black eye also. There are two ways to respond to that - educate the neighbors and support any efforts to reel in the "outlaw" CB'ers.

>Sorry, Steve, but I'm right and I've just skewered your sacred cow!

So, you are telling me that the DoD, DoS, American Red Cross, Salvation Army, FEMA and a host of other governmental and private agencies are wrong, Larry?

That's a pretty silly thing to do in light of their testimony in recent past years.

No...no "sacred cow" skewered here. Just a lot of bull from Delaware.

>Most likely because you are one of the long-term, accepted, "insiders."
>You're not a new ham trying to break into Public Service, but have
>nowhere
>to go and nothing to do once you get there.

Just ran down a list of the local ARES roll call from last week, Larry. 62% of the calls were KE through KG series prefixes. That doesn't count the couple calls on the net thqat I know are Vanity 1 x 3's for guys who WERE in that block not too long ago.

Oh...by the way...Net control was a KF4 call, and the assistant EC is a KG. The present EC is a 2x1, but that's a Vanity Call. He WAS a KE.

>Well, I've not encountered anything of the sort in the MDC or DE
>sections. WNY
>is probably a bit better, but it still has the same problems of there
>being
>no room for newcomers.

I think you're not being truthful since I happen to still be personal acquaintences with folks active in ARES in EPA and NNJ, and they both lament not being able to get ENOUGH new hams, Larry.

>> >They jealously refuse to take a break...(SNIP)
>>
>> Perhaps you meant "selflessly"...?
>
>No, Steve, I said what I meant and I meant what I said.

Theh YOU were just being cruel and snide. Very disappointing for someone who SHOULD know better.

>>OK. Lennie...I mean Larry...we've heard THIS from you before.
>
>And you're not gonna stop hearing it until something changes. And
>there's no need to get insulting!

(a) What are YOUR credentials in Amateur Radio Emergencey Services to
assert what "changes" should be effected?

(b) Insulting is as insulting does. You should re-read what you've
written in the last few posts and realize just exactly how insulting YOU have
been.

>> Perhaps because it usually is the FEW that do MOST of the work, Larry.
>
>BECAUSE THAT'S THE WAY THEY WANT IT TO BE, STEVE!!! This is my whole
>point!

Uncap there, big boy.

I don't believe it for a second. I have been in ARES as both an ARRL
appointee and as a volunteer operator. Thee's always room for more.

Just because you aren't immediately recognized for your particular genius
and skill does not mean you are not needed or wanted...

UNLESS, of course, you carry the same "King of the Hill", "I'm better
than you" attitude you radiate in THIS forum to the local ARES functions...Then
I can understand their reluctance to welcome you aboard.

>>You have a real issue with first responders and other emergency
>service
>> providers, don't you?
>
>Not the trained professionals -- only the Ham Hero(tm) wannabes!

Hot Flash Hot Rod...they are everywhere...EMS has them...the local VFD has
them...local Sheriff's Auxiliaries, the Civil Air Patrol, the CG Aux, etc etc
etc has at least one or two Mighty Mouse types.

The good thing is that they can usually be trained to get over that. But
"training" them with inuslts is not the way to go. Or didn't they teach that
to you in the USAF or college?

>BWAAAAHAAAAAAAHAAAAAAAAA!!!!!!! I'm just glad I didn't have a mouthful
>of
>tea when I read that!

I am too. Sadly for you you'd choke and there wouldn't be anyone around
to initiate rescue breathing for you? What EVER would we do without you?

>> > I think that what is needed
>> >is some functional reform of the ARES system.
>>
>>Then you've not been paying attention lately, Larry.
>

>To what, Steve?

My point exactly. Let's start off with the ARRL's attempts to create a standardized course for Emergency Communications. Have YOU taken it, Larry?

>No, Steve. Lifetime incumbency breeds the contempt which comes from
>familiarity,
>and the tendency to be responsive to special interests rather than the
>needs
>of the public. Term limits make sense in politics, and they would make
>more
>sense in the ARRL Field Organization's emergency service appointments.

More Bravo Sierra, Larry. Term limits only facilitate mediocrity and laziness.

Like it or not, it is a civic duty for the electorate to stay informed on current issues and then to vote according to their knowledge and experience. Unfortunately, we have already seen several sad but prime examples of what voter apathy can do to the political system.

Like re-electing a souse and murderer to the Senate from Masschussettes, or a known liar and plagarist from Delaware. None of thier money could shield them from media scrutiney or the power of the ballot box if the people truly wanted them out.

And term limits only encourage the evil and corrupt to "get what they can" while they are in office since they know the clock's ticking. Witness William Jefferson Clinton. He made a mockery of the White House and HE had term limits.

>>I think that's pretty stupid...espeically from a former senior NCO and

>> person as allegedly educated as you purport to be, Larry. Where do you get
>> this stuff? Mao's little Red Book?
>
>Not at all. It comes from having a charactistic which is increasingly
>lacking in people today -- common sense.

You are a bit overly self appreciating, Larry. What you espouse is socialism.

>I'm sure the hams who participated in 9/11 managed to find some way to
>make themselves useful, Steve.

I am sure they will appreciate your armchair quarterbacking assessments, Larry.

>Some a lot more than others, but a lot
>of
>them, I dare say most of them, probably had more of a tendency to get in
>the way than provide any meaningful COMMUNICATIONS support.

Yeah...I gues that's why the Govermor of New York, the Mayor of New York City, the Public Safety Commissioner of New York and a host of others went on record as saying that the volumous contributions and dedication of volunteer Amateur Radio operators was critical in the post-attack phase of 9/11.

You really need to do some research on your rants before you so unabashedly make such poorly constructed posts, Larry.

>If they
>did something not involving communications, but had a HT clipped to
>their
>belt, they don't count in what I'm talking about here.

EVERYTHING counts in an emergency, Larry. If you'd been there, you'd know.

>>Do you make this stuff up yourself, or does someone ghost write for
>you?
>
>I do all my own writing, Steve.

You got brass cajones admiting that in public, Larry. I left you an "out" for how cruel and foolish your stuff is...You just waded in deeper.

>> And since you have uttered this bitter, cynical vision of the future,
>the
>> rest of us will just quit trying...OK, Larry?
>
>I don't recall ever trying to put words into your fingertips, Steve, so
>please
>offer me the same consideration, OK?

But that's your insinuation, Larry. That's what a careful reader can assume from your posts. It's not "putting words into (your) mouth". YOU said it!

>> And by the way...I will reiterate for you (usually saved for the West
>> Coast Idiot) the FACTS as related to in the Federal Register...The
>Department
>> of State, FEMA, the Department of Defense and other federal agencies do NOT
>> share your bitter, self-flagellating view of Amateur Radio.
>>
>> > It will be a disaster within a disaster.
>
>Major snippage of Steve's typical outbursts usually reserved for
>Lennie.

And LIKE Lennie, you try to dismiss known facts that otherwise dispell your assertions. It doensn't work for you, either.

You insist that ARES and other public service efforts of Amateur Radio operators is nothing more than a "hero wannabe" syndrome, but then you ignore the very public comments of very reputable organizations and agencies that voice nothing but praise for our efforts.

Why is that, Larry?

>No, I was relating my personal experience that newcomers to LOCAL
>emergency
>service are typically left with little or nothing to do to gain acutal
>operating experience during exercises/drills or the occasional "actual"
>scenario. It's about the entrenched long-timers displacing newcomers.
>It's
>as simple as that -- and it's a big problem, IMHO.

First of all, Larry, what credentials do YOU carry to warrant taking over
any other person's appointment as EC, RACES director, etc?

How many actual and how many simulated disaster or other emergency
situations have YOU participated in as an ARES member that would validate your
resume in ES?

What preparations have YOU made to support your community if there was
some disaster? ANY disaster?

>>Ahhhhh! LARRY IS A SOCIALIST! Everyone gives/gets no more/no less
>than
>> the next guy. To hell with personal initiative, sacrifice and service.
>
>No, it's about sharing the hegemony in local ARES groups, nothing more,
>nothing
>less.

No, it's socalism. Everybody body get's the same no matter how much or
how little they contribute to the pot.

>It's about the fear of the long-timers of being displaced,
>therefore
>losing their "position" and whatever "glory" they think they're getting
>from
>it.

So..Larry...If I show up at your place of employment tomorrow with a brand
new CDL in my pocket, are you going to just gladly get out of the seat and let
a new driver with no experience slide into the seat?

WHY should anyone who has worked hard to create something just get up and
walk away so you can exercise YOUR ego? You certainly don't have any
experience or credentials to validate a change...Or at least you have not
stated them here...!!!

>> >Right now, we're not even close to being there.
>>
>>Let's hope we never get close to what YOU envision, Larry. THAT will
>be a
>> really sad day.
>
>From my POV, Steve, we've been there for a long time. All I'm doing is
>trying to advocate change, and to stimulate a meaningful discussion.

>All you
>seem to be doing is trying to find what you're looking for -- another
>ham
>to bash they way you do Lennie.

First of all, you are not stimulating ANY discussion, Larry. You have taken some rather broad swings at people who have endeavored long and hard to contribute something to their respective communities.

At the same time, other than suggesting "term limits", which contributes nothing to the discussion, you have suggested nothing. You have, from what I garner here, zero point zero days of ES communications experience. That is NOT the pulpit from which to be espousing change.

And lastly, Lennie is NOT a licensed Amateur, ergo you are not "another" ham to bash. (pretty good reading comprehension for a public school HS grad, eh?)

Your suggestions are poorly focused, callous and generally without merit. You offer no reasonable alternative, nor are your suggestions from an "informed" perspective...Only uninformed opinion of which the very nature appears to be vindicative in nature.

Try again.

BS, Larry. Speaking for myself alone, I have repeatedly posted messages with invitations to join the Coast Guard Auxiliary, describing a serious need for radio operators. I know for a fact that you've read some of those messages, but I have yet to hear from you concerning membership. Likewise, I have an invitation on my ham radio web site, which I know you have also seen, but again I have yet to hear from you concerning membership.

I gladly insure your full involvement within the flotilla you join. Nobody will prevent you from sharing in the "action." In fact, I suspect you would be placed in charge of communications in that flotilla within a year or two of joining (perhaps sooner in a smaller flotilla).

Of course, if communications isn't your main interest concerning public service, there are a wide range of other volunteer jobs you can participate in. Including public education, search & rescue, administration, environmental protection, and so on. In fact, if it's "insider status" with public service professionals you're seeking , I could probably easily get a volunteer position for you in the nearest Coast Guard station, working right beside the active duty personnel.

In the end, Larry, if you feel left out, it is only because you've placed yourself there.

Exactly...unless he, like Lennie, wants to try and dismiss 97.1, Basis and Purpose of the Amateur Radio Service. There it is...right up front.

Seems to me that's pretty basic.

>BS, Larry. Speaking for myself alone, I have repeatedly posted messages

Brian Kelly, W3RV, posted:

> ... A 500w AM "DSP modulator" . . awesome!
> I knew we din need that monster xfmr . .

Indeed. My local 1360-kHz, Bible-banger has
a 50-kW Harris AM rig that does exactly that.
It digitizes its audio input and encodes the
samples into a "thermometer"-like format
expressed as a parallel output across 48
individual bits. Each of these bit lines
gates an RF amplifier on or off. The outputs
of the 48 amplifiers are summed together,
impedance-transformed to 50 ohms and sent
to the antenna. No mod. xfmr, no HV. And
with switching supplies for the RF amps, there's
no "heavy iron" of any kind. Also, there is
complete redundancy in the 48 identical RF
amps, which can be 'hot-swapped' and failure-
compensated if one or two of the units
goes off-line.

I think of this thing as a 50-kW RF ADC/DAC.

So, sorry Brian, it's already here... at least
at MF BC freqs. The HF BC folks still use toobs,
so they do something like this, but with their HV
supply(s), in a kind-of hybrid PWM scheme.

I have seen the future and it's (sob!) DIGITAL.

There's a guy at the Detroit FCC office who slobbers all
over his shirt whenever he tries to talk to you. Spittle keeps
drooling out of his mouth. Every shirt he owns has food and
spit stains on it. Has to be the grossest thing. FCC must
hire direct from the city half-way houses.

Is this the change that you allege is not being enacted?

Is this the training that you allege is not occuring?

Is this the SAME public service/emergency service that is NOT the
"cornerstone" of Amateur Radio that you allege, Larry?

Because if it is, SOMEONE is spending a lot of money to perpetuate
something YOU insist does not exist. WHY, Larry, would the Federal Government
drop over $180,000 on a project they had no faith in or expectation of results?

Just wondering what your excuses are for this bit of news, Larry...???

QUOTE FROM ARRL WEB SITE:

ARRL Certification and Continuing Education course registration (Oct 18, 2002)
-- Registration for the ARRL Amateur Radio Emergency Communications Level III
(EC-003) and HF Digital Communications (EC-005) courses opens Monday, October
21, 4 PM Eastern Daylight Time (2000 UTC). Registration will remain open
through Sunday, October 27. Classes begin October 28. Registration for the ARRL
Amateur Radio Emergency Communications Level II (EC-002) and Antenna Modeling
(EC-004) courses remains open through Sunday, October 20. If you have not yet
let us know what you'd like to see for future C-C course offerings, visit the
C-CE Course Survey page on the ARRL Web site midnight, October 27. To learn
more, visit the ARRL Certification and Continuing Education Web page and the
C-CE Links found there. For more information, contact Certification and
Continuing Education Program Coordinator Howard Robins, W1HSR,
hrobins@arrl.org.

UNQUOTE

BTW, the thread title should ask NOT "Who are we kidding", but rather "Why is Larry Kidding Himself?"

I've never seen a hjam license that has "extra lite" or "extra light" on it.
All the ones I've seen just say "Amateur Extra".
>
>That's about 24%,

The percentage of post-restucturing Extras is at least 23.5 % (24K/102K) but in reality it's a bit higher, due to expirations of pre-restructuring Extras since April 15, 2000.

>and the fact that we put in for and got it
>means that we are likely to be a higher percentage of active
>on the air extras, at least on phone.

Why? I "put in for" my Extra 30 years ago but I use it often ;-)

And why just 'phone? Lotsa data modes out there.

>I imagine a few of us
>can be found on the 20+wpm CW QSOs and nets....
>
Sure.

--

It will be interesting to see how long the Advanced and Novice classes stick around.
Tech Plus will disappear completely (even if the rules don't change) when the last Tech Plus is expires, upgrades or is renewed (FCC renews them as Techs). 7 years 5 months and a week or two, at most.

I believe it would be easier to obtain/retain
small chunks of spectrum. By this I mean like
WARC79 (30, 17 and 12M). Our use/lack of use would
not be as noticeable as in a large expanse of spectrum
(70cm). I would like to see allocations in the
60M and 4M areas. But it would probably be much easier
to get 50khz here and there than in one block. This
would afford us the opportunity to experiment with
radio at many different frequencies. Avail us of
band openings which could provide communications in
times of emergencies. It would encourage us to use
less spectrum on VHF and UHF (no FM). A world
wide
200khz segment at 222 Mhz, a 500 khz segment at 33cm
and so on is what I have in mind. With world wide
segments, the manufacturers might make equipment
to cover these bands.

Steve:

You're stubbornly missing the point, mainly because you're too excited to have another person besides Lennie as the object of your scorn. I'm not "left out" of a damn thing. I can enjoy all that ham radio has to offer. The Ham Heroes(tm) are the ones who are pathetically striving to achieve some sort of belonging. I have had no use for Emergency/Public Service as of the minute it became clear that it had no use for me! And I'm not the only one who has had this problem. If and when the opportunity arises for me to provide some Real "Emergency" communications under Real Emergency conditions, I'll be able to do so effectively, efficiently, and without benefit of an online course from the ARRL. I'll be able to do it because I've been exposed to good communications and traffic handling techniques as a result of being an involved, active radio amateur.

>results?

Don't look now, Steve, but the Federal Government dropping $180K into the ARRL's ECC/CCE scheme is like me dropping a dime on the ground and walking away from it. If the Feds were serious about this program, they would be funding it to the tune of 10X that amount -- which would still be a drop in the bucket to them. I am not impressed.

> Just wondering what your excuses are for this bit of news, Larry...???

I no make no steenkeeng excuses for the ARRL, Steve -- thees eees not my yob, man! (Ooops -- sorry, Brian -- looks like I just made fun of another minority group!)

>
> Bravo Sierra. WhatEVER reason brings them to Amateur Radio is fine.

Steve:

I don't follow the logic of "recruiting" people into ham radio whatsoever. I believe that ham radio is something that will, on it's own, attract people who have the traditional curiosity about electronics and communications, and would be willing to explore it more fully than just a narrow focus on VHF/UHF/FM "public service" type comms. These "shack on a belt" types, as Brian Burke recently referred to, usually don't end up going anywhere and doing anything much as hams, and I believe that the only hams who have the ability to provide true emergency communications capability are those who have explored the entire world of ham radio more fully and at a more technically- and operationally-involved level. This definitely includes CW proficiency at a useful traffic-handling speed (>12 WPM).

>They can lean about the rest as they go, just like you and I did. They are
>no more or no less likely to be a "good ham" based upon HOW they
>came to Amateur Radio.

That may be OK if it ever actually worked out that way in real life, but my experience is that it doesn't. Hams who have entered the ARS in the No-Code Tech Era and afterward have a tendency to get themselves on a repeater and stay there pretty much for life. Those who had the 5 WPM code test in the bag got their Instant Upgrade to General- or Extra-Lite, and now get to delude themselves that they are the equals of their Pre-Restructuring counterparts. Those who never got the 5 WPM code test are still kerchunking and ambulance chasing.

>>If all he wants is another HT hanging from his

>
> More cynicism, Larry? Whew!~

Yes, Steve, I'm a bit of a cynic when it comes to ham radio these days. But that's just because I've not seen any good come out of the dumbing down of our licensing requirements.

I can't believe it. Most nights, I tune in for the first five minutes,
to see who is on. Usually, I am disappointed and it is the usual saucers
and stuff that is on most of the time. I didn't bother last night, and it
turns out to be someone different from the usual topics, and someone I
would have listened to at least for a while.

It seems a shame, because it is neat that there's an overnight show
that is different from the usual talk show circuit. But too often
the show is about the esoteric, rather than the intriguing.

By the way, according to a bulletin I saw the other day, Kevin Mitnick
is selling off some of his computers, if I remember properly to pay
his legal fees. Perhaps the timing of his appearance lastnight is
connected with that.

I don't doubt that it's a small amount in the overall scheme of things, Larry, but in this day of "fraud, waste and abuse" awareness, the Feds are NOT about to drop $180K into very public a program without some assurance that it's being spent wisely.

>I am not impressed.

I'm not surprised. Nor do I care.

Larry-to-English translation: Oooooops...Got caught with my britches down, and had my bluff called...better slide out of this one gracefully.

YOU started the "discussion" on what's wrong with ARES and how nothing's being done (in YOUR opinion), and then when not ONE but TWO very public and not-so-insignificant events are brought to bear on your "arguments", you suddenly don't have time for it.

Uh huh....yeeeeeeah. Right.

You made this too easy, Larry. You're slipping.

One place I am surprised that we have not made an approach to is the 30 to 50mHz band. In as much as it is being abandoned by public service providers in droves, it would make sense for us to try and get allocations therein.

>A world
>wide
>200khz segment at 222 Mhz, a 500 khz segment at 33cm

Two hundred kHz at 222mHz would be reasonable, but 500kHz at 33cm wouldn't let us do anything. If we don't have at least a meg or two here (for modes like ATV), it will be completely abandoned.

Also, the Japanese have a CB-radio like service around 800 or 900 mHz (they are in every cab on Okinawa!), so adapting these for Amateur service shouldn't be a problem. I am surprised they haven't already.

It's got nothing to do with "scorn", Larry. It's got everything to do with having experience in something you are obviously clueless about, your voiciferous rantings notwithstanding.

> I'm not "left out" of a damn thing.

Sure you are. Otherwise you wouldn't be making a pioint of insulting just about every person who chooses to participate in ARES and other PS type programs. You insist that "change is needed", but other than you insisting that the current "leadership" be ousted, I don't see any substantial suggestions as to how to make ARES more effective.

> I can enjoy all that ham radio has to offer.
>The Ham Heroes(tm) are the ones who are pathetically striving to achieve
>some sort of belonging.

You keep repeating that to yourself over and over, Larry.

>I have had no use for Emergency/Public Service
>as of the minute it became clear that it had no use for me!

I hate being right about this, Larry, but thanks for proving my point. It's not "you" they have no use for. It's your attitude. I can only imagine that the personna that you present here permeates your "real" life. I wouldn't want you around me either with your mealy-mouthed self-righteous attitude.

>If and when the opportunity
>arises for me to provide some Real "Emergency" communications under
>Real Emergency conditions, I'll be able to do so effectively, efficiently,
>and without benefit of an online course from the ARRL. I'll be able to do
>it because I've been exposed to good communications and traffic handling
>techniques as a result of being an involved, active radio amateur.

No, Larry, you will have had the experience because someone who came before you has trained, prepared and maintained the necessary networks, programs, message formats, etc, that are used in organized Amateur Radio Emergency Services and the National Traffic System.

You will have the opportunity because someone, unlike you, was willing to "just do it", and put forth the effort at the local EOC installing equipment,

stumping at city hall meetings, and making arrangements with local agencies to integrate Amateur Radio into thier disaster plans.

You will be participating on nets that have a core membership that will direct the traffic, make the assignments, and decide who dos what, or you will be told that you are notneeded, AGAIN, because freelancing on such nets is not only disruptive to the efficient flow of traffic, it's stupid.

The "good communications and traffic handling techniques" that you were exposed to, Larry, were perfected by persons who didn't give a rat's kazoo about being promoted to "Lord High God Of the Radio Realm" such as you seem to be, but rather just went on about thier business and created something valuable to Amateur Radio and thier communities.

Do YOU know who invented these nets and message handling techniques? I sure don't. Mostly because it was done by people who DID deserve the recognition, but they were more interested in doing it than being applauded for it.

Now...do you have anything CONSTRUCTIVE to offer, other than whining about how your feelings were hurt that you weren't immediately promoted to Radio God Extrodinaire? Or are we to be subjected to more of the same?

Steve

door with a magnet so you can read it every morning
at 7:00 AM.

OK?
Very Good!
You get a cookie :)

---------- cut ------------

Anti-Cooning Pledge

I _____ pledge to stop being a dumbasszd coon by,

1. No longer shuckin' and jivin' and grinin' with my eyes
bugged out like a coon just to get a cheap laugh and gain
acceptance from white people. I accept myself, I am proud
to be black and I respect other cultures whether they
respect mine or not.

2. Respecting the legacy of trailblazing black entertainers
of the past, such as Bert Williams, Alvin Childress and
Spencer Williams Jr. (Amos 'n Andy) and Hattie McDaniel
who were brilliant entertainers, but were forced to play
stereotypical roles because of racism. Because of their
sacrifices, I don't have to behave like that anymore.

3. Refraining from constantly telling jokes and making
cheap statements about such things as chicken wings,
watermelon and needing sex all the time. When done
skillfully and in proper context like Moms Mabley or
Richard Pryor used to do, these jokes are ok. But when
overdone, these comments perpetuate negative and false
stereotypes. Nobody can have sex all day, every day.
Even prostitutes take lunch breaks.

4. Trying very hard to stop using words and phrases in
public like "fit-n-ta" "conversate" and "we be" that
either don't exist in any language known to man or are

best used at the dinner table with family and friends
who understand them.

5. Staying true to my art and convictions in the spirit
of such great heroic entertainers like Paul Robeson and
Cicely Tyson, who years ago during times of even more
severe racism than we see now, didn't "coon out" for
lesser demeaning acting roles even when things looked
bleak and their careers were on the line.

What is a coon?
- A person who is in a position (like a celebrity,
entertainer, politician or corporate executive) to work
towards dispelling Black racial stereotypes, but instead
through his or her behavior perpetuates them in order to
advance their own career or agenda.

"Pleasure me, you coon wench!"
--James Mason, from the movie
'Mandingo the Raccoon'

What have YOU done to go out and make Amateur Radio a better place to be, Larry, other than fuming in this forum?

Have you invited any of those "post-restructuring" ops over to K3LT to see what's available outside of 146 to 148mHz? Have you invited them to try their hand at busting a pile-up or working an HF net?

Of course not.

What has Larry Roll done for Amateur Radio lately?

Steve, K4YZ

Steve speaks with the contrived "wisdom" that can only come from a single evangelistic experience, like a guy who went blind because he looked at a solar eclipse without one of those boxes with a pinhole in it and now goes around the country speaking at high schools about the dangers of looking at a solar eclipse without one of those boxes with a pinhole in it

BTW, welcome to Steve's fecal roster .... you're in excellent company -- he doesn't like me either.

Some may have gone dormant, i.e., lost most interest but retained enough
interest to file the renewal paperwork every ten years.

Do I "use" my extra when I'm on 2m, or my old "tech plus"?
(same callsign).... :-)

I suppose the ham might bring some ham gear that would be suitable for
possible PS work along when evacuating to the emergency shelter.
Maybe a 2m HT and a small HF rig that can run off of his car's battery.
Something that can fit in a shoebox so the XYL can have an adequate
supply of pampers for the baby.... Probably won't be needed, but
"just in case" the ARES people already there need more equipment
or ops.

I hope the FCC does not share your assessment of the value of ARS in "public service", because, IMHO, the only faint but still glowing ember of hope of keeping the VHF/UHF spectrum from being totally dismembered is found in "public service". What other socially redeeming value does activity in that part of the ARS spectrum have to offer? If it is only for banter, we have the FRS and GMRS for that.

The descriptive noun "Amateurs" connotates the right to make fools out of ourselves from time to time, as part of the learning process. In my previous experience with ARES/EC work, I found that cooperative written agreements with the NWS, ARC, and State/County ?EMA emergency officials coupled with participation in their drills and work/study sessions helped to define the niche for ARS participation. Then, when the real deal hit, we were "asked and expected" to participate.

The golden rule was "you are an amateur, never assume a professional status", and "stay out of the way, help where you can."

Has modern communications nulled out the value of ARS "public service"? It is interesting to see on TV the question still being asked "How does Marion County Sheriff communicate with Richmond City Police?" Answer: They get together and swap radios.

O.T. When my local cable company lost signal from the MSNBC feed a few days back, there behind the blackened screen I heard "
M....S.....N....B....C....2...7.....6...".(repeated several times)
distinctly in Morse code, F2 emission I suppose. Where are those who say Morse has been obliterated from modern commercial communications? ;-)

73,
Clay N4AOX

Once, when he was arrested, he was shackled to a bench with his hand cuffs behind his back. The judge was so afraid of Kevin he wouldn't even undo the cuffs so Kevin could dial the phone to call an attorney! He told them the number and they dialed it then held the phone to his ear.

How do I know? Kevin told me.

They had reason to be afraid - once he showed me how to dial a special three digit number that would shut off all phones in a specific grid.

Nice guy but dangerous.....hehehe

>to
>"just do it", and put forth the effort at the local EOC installing equipment,
>stumping at city hall meetings, and making arrangements with local agencies

>to integrate Amateur Radio into thier disaster plans.

And what if their disaster plans had no use for amateur radio? Or are you one of those Ham Heroes™ who can't understand the concept that you're presence with an HT just might not be required in every conceivable emergency scenario?

> You will be participating on nets that have a core membership that will
>direct the traffic, make the assignments, and decide who dos what, or you
>will be told that you are notneeded,

Yep, I've definitely been there, done THAT! I've been made to feel like the hold baggage on a cruise ship marked "Not Needed On Voyage."

>AGAIN, because freelancing on such nets is not only disruptive to the
>efficient flow of traffic, it's stupid.

I don't know what you're talking about here, Steve. I'm a former MARS licensee, and have put in many hours on MARS nets. I know more about net protocol than lots of hams. "Freelancing" is not something I'd ever considered -- why did it come instantly to mind in YOUR case?

> The "good communications and traffic handling techniques" that you were
>exposed to, Larry, were perfected by persons who didn't give a rat's kazoo
>about being promoted to "Lord High God Of the Radio Realm" such as you seem
>to be,

Steve, my whole point, conveniently missed by you, is that I could care less about being the "Lord High" whatever -- but have been thwarted from participation by those who are deathly afraid of LOSING that position!

SNIP

> Do YOU know who invented these nets and message handling techniques?

A lot of our present procedures were "borrowed" from military and commercial radio operators who became hams in the olden days.

> I
>sure don't. Mostly because it was done by people who DID deserve the
>recognition, but they were more interested in doing it than being applauded
>for it.

Steve, you've really got to stop seeing me as "Mini-Lennie." Your mind is all tripped up, here, and you're not making much sense at all.

> Now...do you have anything CONSTRUCTIVE to offer, other than whining
>about
>how your feelings were hurt that you weren't immediately promoted to Radio
>God
>Extrodinaire? Or are we to be subjected to more of the same?

Yes, Steve, here is something constructive -- CHILL OUT!!! You're accusing me of things that are so far off my radar screen, they're not even in my airspace. Get a grip.

Steve:

I have a low-profile, low-power, mainly CW and digital mode station that doesn't get into "busting pileups." I've done many demos of digital modes, and have caused quite a few club members to get involved in PSK-31, mainly due to my having used this mode the last three FD's.

> Of course not.
>
> What has Larry Roll done for Amateur Radio lately?

I've done a lot in the past, lately not as much. I keep my Packet mailbox stuffed with the latest ARRL Bulletins for the few remaining packet users. I attend my club meetings, and have been instrumental in getting our annual Field Day operation and other contests properly logged and reported to the ARRL. We'll probably do the November Sweepstakes this year -- both CW and Phone! (Imagine -- Moi using SSB on HF!) A few of my "sub-club" members (Dover ARC) are even working on making an attempt at the Berdan Award for making a trans-Atlantic 2-meter CW QSO. I've done a few things, Steve, and I've got a few more tricks up my sleeve.

Clay:

I've heard this myself, many times. One of those things that makes me go "Hmmmmmm..." I don't think they'd be sending out that network ID in Morse unless there was someone out there who could read it! And if it's being read electronically, why wouldn't they use a more suitable digital code -- like plain 'ole ASCII? It would seem to me that it is being sent in Morse so it can be recognized by human technicians out there working on the net hardware, using their built-in between-the-ears wetware modem to decode the Morse ID's of the various services on the cable!

That's gotta be an urban legend. The phone company wouldn't be that
dumb. Random people dialing wrong numbers would eventually hit
that 3 digit number....

All I can say is I tried it from a pay phone and it worked. All the pay
phones went dead and my home line 3 blocks away also went dead. They all
came back inservice after 5 minutes.

50 kHz allocations would probably not include phone privileges, so I for
one am not interested in anything that narrow, like 30m, for example. If
60m ends up that narrow it won't help with the fact that I have to jump
back and forth between 3.5 and 14 MHz as propagation shifts, or else work
split on 7 MHz. This really sucks. Phone on 5 MHz would help, but we won't
get it if it's only 50 kHz wide.

NCG imported some of these Japanese 'Personal Radios' (actually mobile rigs) a while back. They had 20 channels FM simplex in 903-905 MHz, which would be legal to use in the US without modification. although away from the planned FM subband and lacking repeater shift, but they were selling for $600, and there were few takers at that price.

No axe to grind with any of them. They are my brothers and sisters and friends. Granted there is bad ones in every group but I can honestly say that the overwhelming majority in my area, at least are good people.

You haven't said, but there is that
> implication, so whatever your reality is, I'm just going by what I've
seen.
> In this way, I guess it's natural for you to view firefighters as being
better

I never stated they would be better hams than others, just good candidates for to recruit from. If you percieved what I said any other way, I guess that is for you to deal with. (Shit happens I guess)

However, this
> viewpoint is self-serving, in your case, and not necessarily true. In
fact,
> it is highly likely that the fire houses of America are full of all the
exactly
> WRONG people to be hams. This is why I stated that if a firefighter,

> technical advancement, DX, contesting, rag chewing, and not necessarily
> as an extension of what he is doing as a firefighter, then he/she is more
> likely to be a good ham.

They could look at the hobby from at least two possible viewpoints..... the public service/emergency communicator standpoint or the hobbyist (and all of the concievable directions that could go.....) standpoint. I think that there is a possibility that people in the emergency services may have an interest in many of the aspects of ham radio.... electronics.... etc. Do you honestly think that a cop, firefighter or EMS cannot have a hobby?

If all he wants is another HT hanging from his
> belt, and another opportunity to swing a mic to his mouth and respond
> to another emergency (real or manufacturered), then he is not what I'd
> call a good ham, and I wouldn't necesarily be making an effort to
"recruit"
> him to the ARS.

Well.... I am sure that having another HT "hanging from his belt" is not going to be the main reason. They are going to join our ranks for most likely one of two reasons.... the hobby end of it, or the public service end of it.

Your sentiments in all of this discussion makes me think you have had a bad experience with someone in the emergency services field. Is this true? If so, I am here to tell ya, for the most part, we are not bad people.... But just like in any other group or division of people you will find bad people, even in ham radio? Listen to 80m HF recently? Again.... another thing to is the region we both are in. Where I live it is fairly rural. Saginaw is about 100,000 people, Bay City and Midland are about 40-50,000 people each. If you are in a larger city such as Detroit in comparision, viewpoints definitely won't be the same.

How is going to attract anyone with the lack of awareness? Haven't seen much in the way of Public Service Announcements out there. If the local area groups are not doing much to raise awareness of our hobby, then it will be stagnant or just barely growing (1-2%) increases. I wish I had a dollar for every person that I have run into that has either said something like "Ham radio... what the heck is that?" or "They still have that stuff around?" If I did.... I could buy a lobster dinner for every regular user of R.R.A.P.

These "shack on a belt" types,
> as Brian Burke recently referred to, usually don't end up going anywhere

The blame there is a double-edged blame... both on the "newbie" as well as the experienced ham.

The growth wasn't there before restructuring and is not there much after the dust has settled from restructuring..... So, that makes me think that the restructuring is not the issue, as much as the promotion/awareness. After all.... how many times can we get our immediate family and friends licensed. After they get licensed.... we have no one else to recruit, if public awareness is not there.

Jim,

We had this spring a training excercise that included three counties amateurs that worked together along side of the 3 counties emergency services groups in a mock airline disaster at a local university. In this case, we utilized the Incident Command System (ICS) as utilized by the emergency services. Our ARES/RACES IC coordinated with the whole scene Incident Commander and delegated the ham groups into the respective groups. Had we not respected the chain of command, and followed orders (or use the word instructions if that is a better thing...) the 150+ ham operators that were utilized that day would have created such a mess.

We, as a group, were honored for our involvement and in almost every case, WE as hams got through, and were able to talk to each other, but the emergency services groups (from 3 different counties with thier own frequencies) had a heck of a time. They never realized how useful we could be. Fortunately we have not had alot of disasters around here, most recent large one was Freeland, MI where a train derailment, (thus creating fires etc.) of Dow Chemical tanker cars had exploded. There was a case of three different counties trying to work together. I must say, we have definitely been lucky. (I better not talk too much... might jinx ourselves!)

Larry,

Care to enlighten me (or us) as to the specifics of that particular sentiment below? At least I am willing to try to see your viewpoint. I am also considering the fact that you are in a completely different area than I am, so our perceptions obviously would differ in some regards. At least I am willing to attempt to see both sides of the street, even if I do not agree.

If it's any consolation, I think every field of endeavor has these types. In EMS we call them (among other things...) "Ricky Rescue". His POV has full width light bars, Star-of-Life decals from every observable angle, and every EMS related gadget the Gall's catolog has. The inside of the car looks like the Space Shuttle with scanners, air horn/siren head and PS-band radios.

In Amateur Radio we have the guys who jump in both fists loaded with HT's, helmet-mounted rubber duckies, and the crack of thier butt's exposed to daylight from excess electronics hanging out.

Larry has some valid references to folks with the excessive gear, but his overall dismal rendering of the stereotype is grossly inaccurate to say the least. Those folks who show up with the gung-ho attitude should be elmered into PS communications the very same as they should have been elmered through the licensing process. That "aggressive" attitude without leadership and supervision is a dangerous thing to have at an incident site.

A bit of supervision and careful coaching will turn that misguided energy into a useful and productive provider. And for those who still resist the effort to guide their energies...well...show them the door and offer them a thanks for coming...Just like someone did to Larry!

>OIC. My "attitude" -- one of wanting to get involved, and learn about
>what was going on -- so I could be another equally valuable resource to
>my community. Yes, Steve, that was some "attitude" all right.

It's difficult for any person to objectively evaluate thier own behaviour
or conduct, so I accept that you are either unaware or just don't care about
what is preceived by others from your writings in this forum.

You routinely exude this "I am a "Real Ham" attitude, and anyone who is
"not you" is not.

NCT's are licensed by the FCC just like you. They may not have obtained
licensure via the same path as you, but then YOU didn't obtain licensure via
the same path as licensee's 20 years YOUR senior, either.

You have not offered one bit of valid procedural or operational technique
that could be implemented with K3LT as the EC as opposed to those who are
presently doing the job in your section. Your only "point" has been that
"they" have been there for a "long time" and that you think they should go.

That is NOT a valid reason to upset the apple cart, Larry.

May I suggest that you get involved in ARRL politics, find someone who
represents what YOU think an SCM should be and who would appoint YOU in the
stead of the current staff?

>>I can only imagine
>>that the personna that you present here permeates your "real" life. I
>>wouldn't
>>want you around me either with your mealy-mouthed self-righteous attitude.
>
>Non-sequitur. Self-righteous people generally aren't "mealy-mouthed."
>I've been accused of a lot of things, but not being "mealy-mouthed."

It's VERY sequitur, Larry. It's at the very heart of why I think you
can't get past the front door with the ARES folks. And self-righteous people
are the very example of "mealy-mouthed". And as for having not been accused of
it before, I guess the time was just not right before.

Time's up. Your repetitive racial, gender and social slurs are the very
example of it.

>>No, Larry, you will have had the experience because someone who came
>>before you has trained, prepared and maintained the necessary networks,
>>programs, message formats, etc, that are used in organized Amateur Radio
>>Emergency Services and the National Traffic System.
>
>And I, on my own and through my initiative, learned how to use them.

And you, on your own, cannot support emergency services. It's a TEAM
effort, Larry. And therein is your failing. You are nOT a "team player".

>>You will have the opportunity because someone, unlike you, was willing
>>to
>>"just do it", and put forth the effort at the local EOC installing
>equipment,
>>stumping at city hall meetings, and making arrangements with local agencies
>>to integrate Amateur Radio into thier disaster plans.
>
>And what if their disaster plans had no use for amateur radio? Or are you
>one
>of those Ham Heroes™ who can't understand the concept that you're presence
>with an HT just might not be required in every conceivable emergency
>scenario?

You've not been paying attention, Larry.

First of all, many communities do NOT have a contingency plan for Amateur
Radio simply because they are not aware of it or there is no organized groups
available in that community to provide the service. We, as Amateurs, can only
present our program to the local planners, and then work with them to implement
our services if they so desire to do so.

As far as my "presence" with an HT is concerned, Larry, I think I've
already dispelled the need for Ricky Rescue types at an incident. And in any
case, I am a professional emergency provider...so if you see ME at the scene of
an incident, then I have a duty to be there, HT or not.

>Yep, I've definitely been there, done THAT! I've been made to feel like the
>hold baggage on a cruise ship marked "Not Needed On Voyage."

Then what have you done to correct it? Have you approached the EC or SCM
to find out what the "problem" is, or are you afraid of the answer?

>>AGAIN, because freelancing on such nets is not only disruptive to the
>>efficient flow of traffic, it's stupid.
>
>I don't know what you're talking about here, Steve. I'm a former MARS
>licensee, and have put in many hours on MARS nets. I know more about
>net protocol than lots of hams. "Freelancing" is not something I'd ever
>considered -- why did it come instantly to mind in YOUR case?

Your own words, Larry. I urgently suggest you go back and re-read what you
are writing. In this post alone you make reference to what you have done "
...on my own and through my initiative, learned how to use them." You make
frequent and numerous references to what YOU do on your own and without team

orientation, a very obvious predisposition to doing things without being part of a team.

Also, MARS nets are NOT Amateur nets.

>Steve, my whole point, conveniently missed by you, is that I could care less
>about being the "Lord High" whatever -- but have been thwarted from
>participation by those who are deathly afraid of LOSING that position!

Sorry, Larry. That is not what you express in your posts.

If you WERE only interested in "doing" it, there'd be no discussion in this forum because you'd already be doing it. What you express here is nothing more than frustration with those who are unwilling to step aside and let YOU take charge. You do not express any reason for the change other than that. That in and of itself is not sufficient reason for anyone to quit anything.

>>Do YOU know who invented these nets and message handling techniques?
>
>A lot of our present procedures were "borrowed" from military and commercial
>radio operators who became hams in the olden days.

And whoever did the borrowing had to implement thier use, adapt them to Amateur needs, and further adapted them over years of experience.

>> I
>>sure don't. Mostly because it was done by people who DID deserve the
>>recognition, but they were more interested in doing it than being applauded
>>for it.
>
>Steve, you've really got to stop seeing me as "Mini-Lennie." Your mind is
>all tripped up, here, and you're not making much sense at all.

Someone is tripped up here, Larry, and it's not me. I am not the one lambasting ARES officials over percieved wrongs in a forum having nothing to do with ARES or those persons.

Furthermore, the paragraph you quoted said nothing about His Licenselessness. Where did you pull THAT rabbit from?

>Yes, Steve, here is something constructive -- CHILL OUT!!! You're
>accusing me of things that are so far off my radar screen, they're not even
>in my airspace. Get a grip.

I am not the one making obtuse assertions of wrong-doing or insisting that ARES officals should be shelved without offering some valid justification as to WHY they should be so dismissed, Larry.

Steve, K4YZ

2137. Two Direct Questions For K3LT

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-23 13:37:28 UTC
From: k4yz@aol.com
Message-ID: <20021023093728.15772.00003740@mb-dd.aol.com>
Source record: 53948

In another thread, I asked Larry Roll a question:

>> Now...do you have anything CONSTRUCTIVE to offer, other than whining
>>about how your feelings were hurt that you weren't immediately promoted to
>>Radio God Extrodinaire? Or are we to be subjected to more of the same?

This was his answer:

>Yes, Steve, here is something constructive -- CHILL OUT!!! You're
>accusing me of things that are so far off my radar screen, they're not even
>in my airspace. Get a grip.

So here is a direct question to which we will see if a responsible and reasonable answer can be provided:

Larry, you have stated that ARES officals should be subjected to "term limits" due to your perceived dismissal as "not needed" in ARES. You specifically stated that "they" did this because they were allegedly afraid of being displaced by you.

The first question is, what does Larry Roll, K3LT, bring to the ARES table in terms of experience that would justify his appointment as EC as opposed to present appointees. (please note this is a summation of past experiences)

Secondly, what would you, as the new EC, do differently as the EC to make ARES more functional, efficient or beneficial to the served agencies. (this is what you would do based upon those previous experiences that you think will make a positive impact).

Inquiring minds want to know.

Patiently awaiting your answer.

Steve, you're in danger of identifying yourself as a Usenet Troll, a
tag you surely don't want to garner to yourself. Larry has a point,
though it surely doesn't apply to all ARES organizations any more than
anything else does.
Any emergency communications organization should be more than happy to
pass around the activity since that's the way to get more qualified
people ready and available. Unfortunately there are those out there just
as he describes, jealous of their turf to the point of shutting the door
on anything or anyone who they see as any threat to their personal
positions.

It is obvious to the most casual of observer that Larry has the
same 'attitude' toward those hams in emergency service that he has
toward no code licensees, and I am sure that attitude becomes very
apparent very quickly to anyone. There is no doubt that when he
tried to get involved he brought his 'I am a superiour ham'
attitude with him.

Other than SKYWARN I don't participate as a regular member of any organized RACES or ARES group, but have worked with each of them and also SATERN (Salvation Army) during several tornado and spring-flood operations around the upper Midwest. In my experience SATERN is the most accepting of 'outside' help, but none of them have chased me away when there was an incident. Watching from the 'sidelines' I note that there sometimes seems to be an inordinate amount of attention to the 'pecking order' however. That tends to suppress my desire to be involved in their routine (non-emergency) activities, which unfortunately means that I may not always be 100% up-to-speed on current operational doctrine. But I learn fast.

Then you need to have a reputable opthamologist or other vision
professional have yours evaluate, Hans.

Larry's posts constantly reiterate his assertions that the leadership
needs to be changed and how he fancies himself in that role.

Did he say "I want to be EC"...No. But judging from the comments of at
least a half dozen other posters, I am on the mark.

You're just trolling. Try a bass boat next time...it's more productive.

>Your so-called "direct questions" are nothing
>more than an LHA-style attempt at misdirection. You learned well!

"Misdirection" means trying to redirect a conversation from it's subject.

Larry has insinutated that he know's better about emergency service type
communications, especially as they pertain to Amateur Radio, than those already
in those roles.

I have SPECIFICALLY asked him to provide us with his credentials in
ARES-type programs that would put him in the position of making an informed
opionion on the matter and subsequently qualify him for a leadership role in
ARES or like program.

If you call that "misdirection", then I must question your competency in
the English language.

Rigs like that would have little or no use around here, except for purely
line-of-sight simplex like short range highway communications, etc. For
that, we already have acres of virtually unused spectrum on 220 and 440.

Steve:

In classic newsgripe style, I'm going to unresponsively answer your first question
with a question of my own:

>> The first question is, what does Larry Roll, K3LT, bring to the ARES table
in terms of experience that would justify his appointment as EC as opposed to
present appointees. (please note this is a summation of past experiences)<<

A.) When did I ever say I wanted an appointment as an EC? Provide quote, one
with the term "EC" contained therein. As it happens, about the last thing I'd want
to be is an EC.

>> Secondly, what would you, as the new EC, do differently as the EC to make
ARES more functional, efficient or beneficial to the served agencies. (this is
what you would do based upon those previous experiences that you think will
make a positive impact).<<

A.) In some areas I've lived in, I'd probably eliminate the program entirely, and
abolish the concept of amateur radio operators sticking their noses into the
business of professional emergency service providers. However, to answer
more responsively, I'd make sure that local Emergency Service officials really
WANTED ham radio operators to be part of their contingency plans and
operations. I'd ask them to specify precisely what they wanted us to do,
when they wanted us to do it, at any particular stage within a given disaster
scenario for which they had developed formal, written, operational plans.
Then, I would ensure that as many local hams as wanted to were able to
participate in emergency drills, with someone different occupying each
position during each successive drill until the entire base of participating
hams has had equal experience in each particular job. In other words, there
would be Affirmative Action for local ARES members -- with no one
individual being able to do the same job each and every time. The concept
would be that flexibility is the key to our strength, and that we would not
be counting on someone who may or may not even be there when The Big
One hits. There would be no Long Service Awards for the same 350-lb.
gorilla who sat in the radio club's chair at the EOC each and every time
for the past 20 years.

I'm sure my answers aren't satisfactory to you, Steve, and will offend your
Politically Correct sensibilities, to say the least. I don't care. Truly I
don't.

My own personal impression of ARES and ham radio Public Service in general is that it is a bunch of people grasping for Ham Hero™ status to the exclusion of any others even being involved. It has been this way in every area I've lived in since I've been a ham. I have been so thoroughly discouraged from ham radio Public Service that I'm not sure if I can even support the concept any more.

>> Inquiring minds want to know.

Patiently awaiting your answer.

73

Steve, K4YZ<<

Now you've got it.

Dear Joe Average,

We regret to inform you that you lack authority to "displace and install".

Your homework assignment is to study up on FO procedures and report where
that authority resides.

With all kind wishes,

Any "point" Larry might have had was lost in the haze of the years of negative rambling he has done in this newsgroup. Actually, if you want to accuse someone of being a troll, why not Larry? He has trolled this newsgroup for years with endless messages designed to provoke arguments. Of course, if one agrees with those message, it is easy to ignore the troll-like nature of them (reserving that title instead to only those one disagrees with).

Perhaps that is your perception from the outside. But I instead see resistance to someone expecting equal turf when there is neither the skills or knowledge to do the job (and no effort yet to get either). Nobody, including those you describe as being jealous of their turf, got there by just walking in the door, nor did they get there by simply walking in to announce, "I'm here, now let me do your job." There is a learning process involved and that process takes time. And, until that process is completed, it is foolish to expect anyone to simply hand over the microphone. Yet I routinely see exactly that very expectation (especially from old timers who simply can't stand to sit through a lecture by someone younger than themselves - or someone with a "lesser" license).

Larry, I tend to agree with you. Didn't (or doesn't) the ARRL offer those neat jackets etc. well emblazened for emergency ops? When the floods hit Horseheads, NY, back around 1971 (and, to be honest, I could be off by a year or so), I did not go as N2JH (hmmm ... I might have been WB2OSP at the time), I went with the US Naval reserve (after serving 4 years active duty, including a tour of Vietnam). It didn't matter if one was cooking, cleaning, patrolling, or communicating. Everyone had an assigned duty and the job got done. I personally (and, I hope I'm wrong) get nervous when it appears (and, again, it may - hopefully - be my interpretation) that a lot of guys want to be a hero. A true emergency will involve a lot of folks, most (if not all) of whom will be unsung heros. We need help, not heros.

I agree with you completely, Larry, but it wasn't done on 30, so the
chances of that happening on 60 may not be any better.

Mind you, the NTIA only want us to use modes they can monitor. What would
those be, I wonder? I assume they themselves (or rather the agencies they
represent) use perhaps USB (not LSB) and some kind of data mode (TOR, PSK,
RTTY or what, exactly?).

Yes they do. I'm in Maryland myself. I suppose that the police in a lot of
other areas are going for'trunked' radio, which is a bad idea IMHO (too
much to go wrong)

If the rigs had been a lot cheaper it occurred to me that you could set up a repeater with the input in that range, and use them only to transmit with separate receivers to listen on the output, as a lot of people have scanners that would cover that range, but they were way too expensive for a setup like that to be atall appealing.

I remember years ago a guy who used a crystal-controlled Tx on 2m FM, with an early 6-channel scanner as his Rx. I also met someone back home in England a long time ago who demonstrated a 27 MHz repeater to me! All the (highly illegal) users were using scanners together with their CB rigs to deal with the repeater shift, which is what made me think of it. The output frequency was out of band, of course.

Well, there ARE ways to shut down a node. But hardly with 3 digits.
That's undoubtedly BS.

Back when the DTMF was a 3x4 matrix for customers (and 4x4 matrix for
control like on some HAM HTs) the 'phone company matrix was
quite different, and those extra keys....

Well, time to leave that one alone.

3 digits to shut down a node now? Yeah, right. And you found those
three digits written on a piece of paper in that Corvette for $50 every
knows about from the 60's!

WAIT!! Was there a black helicopter involved?

Mike

Wouldn't you think a "real ham" would have better things to do than
whine about "vanity callsigns"? I would. Get a life, Jimmy.

Wouldn't you think a "real ham" would be able to find the 10 meter
band? You still looking dickieboy?

You're assuming hams have stuck their noses in where not invited, which I doubt is often true. In this area, for example, the civil defense office contacted the local ham club after reading a FEMA manual that suggested the use of ham operators to fill in for communications shortages. What evidence do you have that this has not been repeated elsewhere, including in the area you live in?

> However, to answer more responsively, I'd make

> written, operational plans. (snip)

SOP, Larry. Most towns develop a plan that lays out the activities of each group, professional and volunteer. Once that is prepared, a MOU is often signed to insure each knows their place in the pecking order and role during any event. Staged disasters test the plans, with modifications made where necessary before the next staged event (or the real thing).

> is the key to our strength, and that we would
> not be counting on someone who may or may
> not even be there when The Big One hits. (snip)

First of all, no group I've seen has depended on a single individual for any job. However, groups do assign specific jobs to specific people within the group based on strengths and weaknesses. Those assignments would be your job as coordinator. And do remember the goal is success at the mission assigned, not making members happy with your idea of ham affirmative action. And the only way to insure success is to put the right people in the right jobs.

> There would be no Long Service Awards for the
> same 350-lb. gorilla who sat in the radio
> club's chair at the EOC each and every time
> for the past 20 years.

The person's size is not a selection criteria, Larry. His ability to do the job is. And if that 350-lb gorilla is the one who does the job best, you'd be a fool, and a darn poor coordinator, to look at his weight instead of his job performance.

> My own personal impression of ARES and ham
> radio Public Service in general is that it
> is a bunch of people grasping for Ham Heroï¿½
> status to the exclusion of any others even
> being involved. (snip)

Larry, in a country full of couch potatoes who contribute very little to their communities, volunteerism is heroic. Volunteers fought to bring this country into the world. Volunteers have pulled people from burning buildings. Volunteers have worked long shifts to help keep communications working during disasters. Volunteers deserve all the praise they get and more. But they don't get praise for just being volunteers - they get it for doing a job well done.

As for your exclusion argument, I just don't see it. Again, a good coordinator is always looking for more. If that is the case with your local coordinator, you will be used if you can do the job. However, just showing up with a ham license is not enough to show you can do the job. Instead, it is time, effort, experience, and demonstrated commitment, that counts most. And none of that is gained by walking away pouting about being excluded.

THIS is "misdirection", as cited by K0HB.

Fine response, Larry.

>A.) When did I ever say I wanted an appointment as an EC? Provide quote,
>one
>with the term "EC" contained therein. As it happens, about the last thing
>I'd
>want
>to be is an EC.

Only by virtue of two weeks of whining and complaining about how some
un-named ES types "dissed" you by dismissing your overtures to "join in".

>A.) In some areas I've lived in, I'd probably eliminate the program entirely,
>and
>abolish the concept of amateur radio operators sticking their noses into the
>business of professional emergency service providers.

That's a great response.

You really are first cousins of Lennie, aren't you...?!?!

He wants to undermine and diminish Amateur Radio's ability to meet it's
responsibilities, and so do you.

>However, to answer
>more responsively, I'd make sure that local Emergency Service officials
>really
>WANTED ham radio operators to be part of their contingency plans and
>operations.

This is part of the MOU process, Larry. If they weren't wanted or needed,
there would be no such agreement penned.

>I'd ask them to specify precisely what they wanted us to do...(SNIP)

Not a single thing ehre that isn't already done, Larry. Again, this is a
part of the MOU process.

>Then, I would ensure that as many local hams as wanted to were able to
>participate in emergency drills, with someone different occupying each
>position during each successive drill until the entire base of participating
>hams has had equal experience in each particular job.

Again, already there. Maybe not for you, but for everyone else.

>In other words, there
>would be Affirmative Action for local ARES members -...(SNIP)

Affirmative Action was a placebo for the liberal cause. Still is. Are
you a liberal, Larry?

>...with no one
>individual being able to do the same job each and every time.

Yeah...let's not let anyone gain proficiency in any aspect of the program
or find thier own niche.

>There would be no Long Service Awards for the same 350-lb.
>gorilla who sat in the radio club's chair at the EOC each and every time
>for the past 20 years.

Here's your true Id, into the daylight, Larry. This is NOT about being
able to do a better job. It's about Larry's personal vendetta against
"someone".

>I'm sure my answers aren't satisfactory to you, Steve, and will offend your
>Politically Correct sensibilities, to say the least.

I don't have "politically correct sensibilities", Larry. Just an inate
ability to see through you, even from this distance. That you are unable to
answer a direct question with a direct answer was not unexpected.

>I don't care. Truly I don't.

If you didn't, you woun't have answered this post. You did, therefore you
do.

>My own personal impression of ARES and ham radio Public Service in
>general is that it is a bunch of people grasping for Ham Hero™ status to
>the exclusion of any others even being involved.

Then you are only fooling yourself, Larry. Worse yet, you are trying to
fool others into believing that a "negative" encounter you had is the status
quo for the entire organization.

You are wrong for doing that.

>It has been this way in
>every area I've lived in since I've been a ham. I have been so thoroughly
>discouraged from ham radio Public Service that I'm not sure if I can even
>support the concept any more.

Then quit showing up at these functions with your "Real Ham" attitude, and
BE a REAL Ham, Larry, and realize that your mere presence does not warrant an

immediate promotion to a leadership position. It doesn't work that way in ARES anmore than it does the civilian work force or the Armed Forces.

>>Patiently awaiting your answer.
>
>Now you've got it.

No, I got your dodge around it, but I guess it's the best you can muster.
Too bad.

Second answer. Only your incesant whining about having been excluded and
your insistance that "changes" be made to the program that, on the face of it,
are merely the lashings-out of a man with a vendetta.

But since you are focusing solely on the term "EC", let's broaden that and
ask you what credentials and experience do you have that qualify you in ANY
"emergency services" related leadership role, in or out of Amateur Radio?

Second request.

Ryan:

In order to save me a lot of keystrokes, please review my postings under
this subject thread from the beginning, and you'll get the picture. In order
to avoid possibly impugning the character of good hams involved in
ARES in areas I've been in, I'm not going to be any more specific than
I've already been. My opinions are the result of a long-running experience
in many different places as a result of my movement every two years or
so during my Air Force career. In some of these places, the conditions
that caused my disgruntlement years ago may not exist today. However,
I've received a lot of feedback now which verifies the fact that a lot of
what I'm talking about is still a present and widespread problem.

Whether you see my point-of-view, or not, is entirely up to you. I can't
do your thinking for you.

Hmmm. I've been doing my job for only two years, but in that time,
I've never met a "Paratransit Operator Wannabe." At least, not ones
who drive around in a large van with a wheelchair lift, a Q'Straint
restraint system, a Vital One kit, and a fake CAD/AVL comm system.
And, if anyone had vehicle so equipped, s/he could make money as a
REAL paratransit operator working as one of our contract operators,
or for one of the Medicaid transport providers. When I took this job,
I wasn't a "Paratransit Wannabe." I was a "State Employee With Good
Pay, Benefits, and Job Security" wannabe.

Brian:

If the job is being done correctly, the qualifications for EC involve a lot more than one would know even as an Extra-class radio amateur with 20 year's experience. I don't claim to have those qualifications, even though, if I tried, I might find that I do. One "qualification" I lack is an non-jaundiced view of the very future of ham radio itself. I'll admit, I'm horribly lacking in that particular area, because I don't think ham radio has much of a future. I see it declining rapidly, in spite of the licensing requirements becoming more dumbed-down with every action taken by the FCC with the ARRL's sanction. One reason for my POV is our reliance on claims of our phenomenal value as public service emergency communicators in order to justify our hold over billions of dollars worth of RF spectrum. IMHO, I don't think our culture of Ham Heroism is going to carry us much longer.

Here we are, about two decades past the invention of packet radio, and I still can't send a packet radio message, carried entirely on an amateur radio RF backbone, across this country -- in any amount of time. I call this a dismal failure of the leadership of the American Radio RELAY League. Think about it. I sense a new thread coming on.

Don't look now, Steve, but Dick's opinion carries a lot more weight in this NG than yours does at the moment. I think those years of Lennie-and-Hans-bashing are finally biting you in the ass.

Face the facts. I skewered one of your sacred cows by expressing my own legitimate concerns about ham radio public service. Now, the only way you can fight back is to sling mud in my face. I have expressed concerns based on a long-running negative experience, and have clearly identified my experiences, and my opinions, as my own and no one else's. This is not personal, but you are gratuitously making it so. I think it's time for me to repeat my previous advice: Chill out, Steve!

Sorry, Steve, not until you provide a responsive reply to my previous two requests for YOU to provide a quote from me stating that I sought an appointment as an EC. I have stated clearly, now for the third time, that I don't consider myself qualified for, nor do I seek, a leadership role in ARES. I haven't even sought office in my local radio club, having already held each office except Treasurer. I've had plenty of time as a "leader." My disgruntlement is about over the times I've been denied the opportunity to serve as a mere worker bee, by people too jealous of their "visibility" to local officials to allow a newcomer to step in.

Now, Steve, put up or shut up.

No doubt. However, why is it the responsibility of "local groups" to provide
public awareness of amateur radio? After all, we have a "National Organization
for Amateur Radio" -- the ARRL.

>> These "shack on a belt" types,

>
>The blame there is a double-edged blame... both on the "newbie" as well as
>the experienced ham.

I don't know what the "experienced" hams have to do with it. When I became
a ham, all of my studying, learning, and operational experience came about
as a result of my own initiative. No other more experienced ham really had
much,
if anything, to do with it. Of course, todays new hams have come to expect

everything handed to them on a silver platter; therefore I can see why they'd have a tendency to blame their lack of progress on others.

Larry,

With a brush that broad, I'm surprised you have the strength to swing it.

I regularly deal with young (and not so young) people coming into the
Amateur Radio, and I can't honestly identify anyone in search of a "silver
platter".

EC is more about people handling than message handling. Being able to
persuade and motivate is probably the biggest part.

Good luck on packet.

I think truckers are authorized to use 10-meters, just like doctors, school teachers, farmers, office workers, and any other sort of ham uses the band. You got something against truckers?

ONLY IF THEY HAVE THE REQUIRED LICENSE! That is the issue here; the use of
10 Meters by unlicensed truckers that just buy one of those "export" radios
(illegal to import and sell)
and start talking. I hear them all the way up beyond 29 MHZ.

Now if a driver obtains the required license, he/she is more than welcome to
enjoy Amateur Radio
and all its rewards in accordance with the rules of the Service. ALL
licensed persons are welcomed and encouraged to make use of the ham bands.

One of the things that gets a LOT of negative attention is the use of AM
below 28.300 MHZ where
voice modes are not allowed in the USA/Region 2. If a driver hears Morse
Code (CW) on that
frequency, that is why. All drivers can do Amateur Radio AND their driving
friends a huge favor by passing the word that 10 Meter operations DOES
require a license and that the Feds are back in enforcement--especially
where it concerns out-of band-operation by CBers. MANY hams are
highly ticked off about the unlawful intrusions and are actively monitoring
the bands for it--even ob-
serving trucks on the highway for such goings-on. Based on their tape
recordings and tag numbers,
FCC WILL issue a warning to the driver's employer! It IS a serious matter,
folks, and you should
heed the warning.

Perhaps, but I don't see why. PACKET as an every-mans mode never took off because it required additional equipment and skills that folks didn't want to obtain or employ.

Furthermore, the "impersonal" interface of computer and man detracted from Amateur Radio's prime drawing power, and that is direct interaction with the radio. That is part of the draw to CW for me...I enjoy phone op, but there's something more rewarding about that direct interaction that makes it more "fun".!

>Don't look now, Steve, but Dick's opinion carries a lot more weight
>in this NG than yours does at the moment. I think those years of
>Lennie-and-Hans-bashing are finally biting you in the ass.

That it happens to lean your way wouldn't happen to have anything to do with how much credibility you lend it, would it, Larry...?!?! =)

>Face the facts. I skewered one of your sacred cows by expressing
>my own legitimate concerns about ham radio public service.

Larry, Your "legitimate concerns" are nothing more than a series of expressions of personal frustration over your perception of rejection by persons who didn't deem your desire to be "in charge" as important to ARES as YOU deemed it.

Other than a very cynical expression of stereotyping of "shack-on-a-belt wannabes" you have not rendered a single suggestion of constructive criticism on the current state of public service communications. Not one.

>Now the only way you can fight back is to sling mud in my face.

The mud is coming from YOUR puddle, Larry.

>I have
>expressed concerns based on a long-running negative experience,
>and have clearly identified my experiences, and my opinions, as
>my own and no one else's

No...You have expressed your opinions in such a way as to make it seem to the casual reader that the circumstances you relate are a pervasive and widespread phenomenon. Such is not the case.

>This is not personal, but you are gratuitously making it so.

Of course it's personal, Larry. You make your own gratuitous character assassinations of persons involved in public service communications and of the very concept itself, then expect to escape criticism for it. Sorry.

>I think it's time for me to repeat my previous advice: Chill out, Steve!

I think it's time for you to take your OWN advice, Larry. You can't slap people in the face the way do and then not expect to be swung back at.

Steve, K4YZ

>>Steve
>
>Sorry, Steve, not until you provide a responsive reply to my previous
>two requests for YOU to provide a quote from me stating that I sought
>an appointment as an EC.

OK, Larry. I thought you were a person of some character and intestinal
fortitude. I can see you are not.

>I have stated clearly, now for the third time,
>that I don't consider myself qualified for, nor do I seek, a leadership
>role in ARES.

My comments were not focused solely on "leadership", Larry, although you
have used that to dodge the questions.

In this post you acknowledge that you have NO credentials with which to
make the stinging insinuations and you have made.

>I have stated clearly, now for the third time,
>that I don't consider myself qualified for, nor do I seek, a leadership
>role in ARES.

Ergo the insults and the criticisms expressed over the past few days by
you were based solely upon personal disgruntlement, and NOT on any failings of
the ARES system (or any other Amateur Radio public service, for that matter) to
meet any real or perceived obligations or goals.

>My disgruntlement is about over the times I've been denied
>the opportunity to serve as a mere worker bee, by people too jealous
>of their "visibility" to local officials to allow a newcomer to step in.

People who are in some position of "authority", be it a volunteer service,
political office, or the manager of the local McDonald's don't feel "jealous"
of their "position" by "mere worker bee(s)" when that person is doing routine
tasks in support of that person "in authority".

Indeed, that person can not attain that "visibility" in the eyes of those
they seek to "impress" without the efforts of the "worker bees" to which you
refer.

No, Larry...I am not the one who needs to "shut up". You've shown your
hand. That you don't like being exposed is your problem, not mine.

Sorry.

Steve

I think this is an unreasonable request. One dollar is too much. A dime is more reasonable. I have mentioned Ham Radio a few times to people. Even advocated it, sort of. I never got anyone that got interested in it. Can I then ask them for a dollar?

Problem is, there is no enthusiasm in the Ham Radio community. I'm not asking for a silver platter, but it helps when others share your interests. Hams today just arent interested. And when such information is presented (such as at Hamfests or Conventions), it only serves for additional propoganda. (Interest level is low, and there are few attendees of existing Hams). By the way, I plan to attend the Microwave Update Convention in CT this weekend. I am interested in the Noise Figure Lab and Antenna Measurement presentations.

Just joking about asking for a dollar.

Your criticism has been directed mainly at those in authority (such as an EC). Because of that, Steve asked fair questions - what qualifications do you have that would make you a good judge of their performance and what would you do differently.

> I have stated clearly, now for the third time,
> that I don't consider myself qualified for, nor
> do I seek, a leadership role in ARES.

Nobody is asking you to run as a candidate for a leadership position. Instead, the questions seek your qualifications to judge others in those positions.

Well.. to see your point of view.... that would require knowing it in the
first place. And I can think for my own.

His sister became the owner of them and sold them on eBay if I recall
correctly. Laws are meant to be broken.

A. Tape recordings, observations of truckers and other such
vigilante nonsense by hams have absolutely no legal basis in law
and would be tossed out of a court of law in a heartbeat, IF they
ever got that far.

B. You may perceve ten meter use by trucker as a problem of
national concern, but have you heard there's a worldwide
terrorist war going on? Get a reality check! And the FCC
does NOT regard YOUR ten meter problem as on of their
priorities. In fact, YOUR ten meter problem is not even on
their radar screen. What scarse enforcement resources the
commission has are being used for high-priority, as they see it,
national problems, none of which include YOUR ten meter
problems with trucks. Again, get a reality check!

C. Try a new experience. Turn off all your ham radios and spend
some time with your wife, kids, grandkids, family, etc. And
stop bitching about no code techs. I heard you bitching about them
with your buddies on two meters last night. Some of those no
code techs make six times the money you make!

> "fun".!

I gotta jump in here Steve and toss out some comments on this one
which are at variance with yours. 2m Packet was huge as an everyman's
mode up thru the mid 90s and still is huge along the NE corridor. At
it's peak there was virtually 100% coverage from somewhere in the
Carolinas up into southern Canada and west to the mountains where it
got stopped dead. There were thousands of users, maybe tens of
thousands. There was e-mail, file swaps, bulletin boards, etc. And the
dx spots networks. I was there. We're still there.

Addressing Brainiac's inane post (another one) the reason packet never
spanned the whole country is based in geography and population
demographics, had absolutely nothing to do with "organization" or some
idiotic mythical "failure" on the part of the ARRL. Or by a lack of
participation in geographic areas where 2m packet is a sustainable

mode. Sustainability is the whole trick and the only trick.

As a VHF/UHF WAN packet requires relay nodes every 50-75 miles max spacing, closer in the mountains. That never happened because of the difficult paths thru low to very low population density areas like the midwest and the deep south. If ya have a zllion hams per 100 square miles like we have here ya have a high probability of having enough nodes to cover and interconnect neighboring regions. That was and still is the case in the NE.

But if yer out where ya can see waves of wheat, corn or cotton out to the horizon 360 degrees there ain't gonna be much 2m packet. There isn't anything more complicated about it than that.

Nodes have to be established and maintained - out of the wallets of the node owners, we can't make money or be tax-supported with our comms like the cell phone and Internet operators do. Tell them they gotta play by our rules and the global Ma Bell/.gov/.edu networks will evaporate overnite.

2m packet is very much alive and well today along the east coast from roughly central Virginia thru somewhere in northern New England. My own Philly-based club has around a dozen 2m nodes in operation plus a number of 70 cm long-haul backbone nodes. They connect with similar nets both north & south from here.

The largest volume of traffic today is via dx spots utility, they roll in all day every day. It's quite normal to have a fully dedicated 2m xcvr, TNC & 'puter sitting on one of the local nodes. Ya have another 2m xcvr for yakking the machines, etc. Some e-mail & BBS is also still run thru the spots nodes AND in real time. None of this crawling Usenet crap. Look Ma, no AOL req'd.

Participation? Enormous. To the extent that that during some of the recent DX contests the system has completely tanked due to gross overload. That seldom if ever happened back in "the glory days of packet" - and those were 80xx chip & DOS days. The big problem is the old 1200 bps standard, it's just too slow to handle today's volume. No biggie, 9600 bps is on it's way, the development work is being done and it's showing up in the newer Jap xcvrs in volume. Along with the new software. You bet packet is still under development.

I dunno anything abt it specifically but it wouldn't surprise me if other major population centers like So Cal & the Chicago area also have very active packet nets.

I think you have the wrong slant on packet as it exists today, it's no longer the computer hobby it was. Packet today is, in general, considered simply a basically boring but useful ho-hum utility vs. being a hobby unto itself as in the old days. Another instance of what usually happens when a technology matures.

The digigeeks gave up on packet +/- cometh the Internet for the masses and there went one version of packet being an "everyman's" mode of sorts, they have no use for packet today, not interested in dxing or they can't run HF dx, doan have the licenses, etc. But the hard core is still in there as usual . . only more so today.

Let's not forget 2m APRS which is also gathering a lotta steam in the packet game.

Steve:

Hunh??? But…but…but…I thought digital modes, Packet Radio in particular, were going to be the Future of Ham Radio -- and we were promised that if the high-speed code testing requirements went away, we'd have phalanxes of bright, eager, ethnically diverse, computer-literate, young people of both sexes
beating down the doors of 225 Main Street, ready to join the ranks of ham radio operators! They were going to cause the Digital Revolution in ham radio which brought us into the 21st Century -- if only we'd throw off the shackles of code testing which kept them in their downtrodden despair! So what happened?

> Furthermore, the "impersonal" interface of computer and man detracted

Hunh? You *like* CW -- but you're against high speed code testing. I see. You just don't want to be on the politically incorrect side of this particular issue. That's OK, Steve. I understand. It takes courage to stand up for something that you believe in.

2199. What's the deal with 220?

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-25 16:44:07 UTC
From: mike coslo <mjc5@psu.edu>
Message-ID: <3DB974D7.45EEEA46@psu.edu>
Source record: 54013

I gotta ask, just why don't Amateurs use 220?

If you look in the catalogs, the 220 ht's look like (and apparently are) relics from the mid-80's. And so loaded with features like 10 memory channels. And these living dinosaurs are not cheap either. One of them, I forget the model, costs more than my FT-50!

There is one exception - I noticed a review in QST of a new Icom unit. But that's the exception that proves the rule.

So here we are worrying about a threat to 220, when it appears that we just don't use the band that much.

I looked up the numbers of repeaters in PA as a test case. Turns out we have 37 - 220 band repeaters in the state. Truly not very many. I don't know how much traffic they handle. 1 is linked to local Law, so presumably that's an emergency use repeater, and 2 are closed repeaters.

Seems to me that if we don't use it, we gonna lose it. And we won't even notice it except that when we do lose it, other groups may consider us better picking for giving up even more spectrum.

But exactly WHY don't we use it?

Again, NOT by me!...That was Carl, NCI, Lennie, et al.

>Hunh? You *like* CW -- but you're against high speed code testing. I see.

The first code test I passed was 5WPM, conducted by one of the
math/science teachers at my high school in 1972. Within 90 days of fist
signing on as WN8OAH I was up to 15 WPM (per W1AW Proficiency Run), and before
I graduated in 1974 I was up to 25.

No additional testing was required to get me there.

>You just don't want to be on the politically incorrect side of this
>particular
>issue. That's OK, Steve. I understand. It takes courage to stand up for
>something that you believe in.

You know I don't care diddle about "politically correct", Larry. But I
likewise disdain tilting at windmills. The FCC is NOT going to RE-institute
code testing above 5WPM. The best thing we can do now is support the present
5WPM (which I doubt will ever happen too...) and encourage new Hams to learn CW
for the same reasons I (we) like it.

Dwight:

Well, then, I'll answer you now and Steve again - for the third time. My
qualifications are my intelligence, my observant nature, and long working
experience in real world supervisory and managerial positions where I was
responsible for dozens of people and millions of dollars worth of resources.
In spite of the fact that I don't aspire to be one, I'm sure I could be a
better EC than you could ever imagine. And one thing I would make sure
of is that any and all radio amateurs with an interest in Public Service
and ARES were welcomed with open arms, given good training, lots of
hands-on experience starting from the very first day, and encouragement
to further their knowledge and operating skill as radio amateurs. There
would be no entrenched Ham Heroes anywhere in sight. Everyone
would do everything, and I'd never let the same person do the same job
twice in a row until everyone who wanted to be involved WAS involved, and
had done everything that there was to be done. In-building EOC
positions would have to be staffed on a strict 8-hour shift basis, if there
are adequate personnel to allow it; otherwise, shifts would be adjusted
to permit a change of faces and to allow more people to get that
experience.

Now, come up with some more whines and complaints.

>> I have stated clearly, now for the third time,
>> that I don't consider myself qualified for, nor
>> do I seek, a leadership role in ARES.

Mr. Riley Hollingsworth of FCC WILL and DOES send warnings based on recorded information gleaned by unofficial observers. Most of the time, the companies for whom the
drivers work take such warnings very seriously. They then normally discipline the driver(s)
involved, even going so far as to physically inspect the truck and, finding illegal equipment as
described in the warning letters, order it removed, OR even FIRING the employee(s)
involved! If you are not aware of it, this is what happened in the case of the Cheetah Transpor-
tation driver who was monitored near Rock Hill, SC. Quite simply, the Safety Director inspected
the truck and found the radio as described via phone conversation with Mr. Hollingsworth. Such
radios such as certain Galaxy and Connex models are illegal to even import into the country.

>

The reason that illegal radio operation, whether it is interference to Amateur or other radio
services, will get attention is because, truth is, if illegal operators can get away with operating
on the Amateur bands, then there is no reason for them not to operate on other, even MORE,
important radio services----such as the international HF aviation band. Mr Riley Hollingsworth,

Special Legal Counsel for Amateur Enforcement IS concerned with illegal operators because that
is his JOB; it is what he was appointed for. What you DON'T know is that a ham was just recently
appointed to Billy Tauzin's powerful sub-Committee on Communications, likely in response to a
barrage of complaints from individuals, the ARRL, and hams about the enroachment of CB operators onto the ham bands. IF you don't believe that Amateur Radio DOES occupy a much
"higher" rung in importance as opposed to CB, consider this; when PL106-521 was passed, giving
local LEOS the ability to pass legislation and abate interference from illegal and over-powered CB
sets, Amateur Radio and all other licensed services were EXEMPTED from this. At this very mo-
ment, there is a new Federal Bill passing thru Congress to exempt Amateur Radio antennas from
CC & R covenants. Why? So that Amateur stations can provide a wide, effective and dispersed
back-up communications system in time of emergency. Because of the dedicated hams, their ARRL-sponsored emergency training courses, and their rapid response to disasters for nearly 100
years, this Bill is likely to become law as more and more Congresspersons are signing on as sponsors. CB radio will get NO such exemptions.

With the appointment of Greg Walden of Oregon to the Communications sub-Committee, he arrives with the knowledge of the problem of outlaw radio operators that think they can just steal
frequencies without fulfilling the requirements set forth in Title 47 of the US Code. Because Amateur Radio IS considered to be a valuable communications resource, it is quite likely that Mr
Walden can be "persuaded" to introduce additional legislation to protect that resource from inter-
ference. The studies, the suggestions, the flurry of letters have been in progress for some time to
find ways to deal with this. The war on terrorism has NOTHING to do with interference to licensed services who have every right to expect that their spectrum assets are available to them
free of intrusion. One of the ideas that has been put forth is the RESTORATION of enough funds
for FCC to go after the truck stops, CB shops, and other outlets who are actively promoting the
sale and use of so-called "10 Meter" radios that are already enjoined from import into the USA.
Another idea is to allow state DOT agencies to routinely inspect trucks for said radios using a list
supplied by the Customs Service or FCC--among a few others. You are correct in that FCC cur-
rently does not have enough funds to aggressively go after illegals, BUT that can change.

The FCC is not engaged in fighting terrorism except in monitoring for possible radio traffic that
could indicate terrorist activity. Their job is to regulate and enforce the Communications Act of
1934 as amended. That includes protecting licensed users from intrusions from "tan fer thar, driver"
on frequencies those truckers have no business being on. It will take time, but those bands, includ-
ing 10 and 12 Meters, WILL be defended. AND those "vigilante" hams WILL continue to silently
record, document and report the activity of truckers or anyone else who encroaches onto the inter-
national ham bands.

> C. Try a new experience. Turn off all your ham radios and spend
> some time with your wife, kids, grandkids, family, etc. And
> stop bitching about no code techs. I heard you bitching about them
> with your buddies on two meters last night. Some of those no
> code techs make six times the money you make!

You are full of CRAP! I haven't been on 2 Meters in over a week, and you have NEVER heard
me say a word about a no-code tech! A no-code tech is a HAM. Period! It makes no difference
(to me) that I happen to have more privileges than a no-code tech.

What anyone makes is of no concern to me! I am retired on gross of $30,000 + + at age 54! I
am living the life of Reilly (not Riley). I LOVE those warm days down at the lake fishin'!

Many reasons Mike...220 is not available to ham radio worldwide. Thus making it very low on the 'cost effective' scale for the manufactures.

For years and years the band has/is/has been under fire from the FCC for reassignment to other services. In fact not all that long ago the bottom end was ripped off by UPS (the brown trucks) and NEVER USED. So the FCC gives us a digital slot at 219. Good grief.

Call us gun shy if you want.

Well -- many countries don't have 220 MHz allotments -- so the Japanese manufacturers see a limited market.

As far as using it -- it is live well here in Southern California.

See URL: http://www.220sma.org/smarpt.htm

Lists about 150 220 MHz repeaters in Southern California

And they are quite active and many are inter-linked.

Another urban legend. And it was about 20 years ago.

UPS lost whatever reluctant interest they had in that band because
"Tio Carlos" Roberts (*) and his crew at MaCom never made the
promised ACSB equipment, there was no other commercial 220 MHz
equipment available, and therefore UPS never filed for a license. It
was MaCom that pushed the "UPS on 220" campaign.

UPS eventually went to Motorola who sold them their present 800
MHz system which works just fine.

(*) ex-FCC Field Engineer and later Private Radio Bureau Chief who
got there by being the right ethnic at the right time, a bright
engineer who had an unfortunate track record of backing the wrong
horses including ACSB.

Speak for yourself, white man.

First of all, we have no 220MHz band -- we have a 222MHz band.

Second of all, it IS widely used for repeater linking, packet backbones (especially DX/contest clusters), and similar utility uses. Our W0EF 2m/70cm repeaters systems here use several 222MHz freqs for remote rcvr uplinks. Given the dozens of hardly-utilized repeaters on the adjacent bands (2m/70cm), I see little need for any "end-user" equipment (HT's, etc.) aimed at this busy utility band. Apparenly (and thankfully) the manufacturers have the same mindset.

Your mileage may vary.

UPS was the bystander, and as the results show, they didn't care
what band they operated on.

Don't blame them, blame Carlos and the other "promoters" of ACSB.

Thank you for the correction, Hans. It really wasn't needed tho'. I'm well aware that the band goes from 222.0 mHz to 225.0 mHz. Lots of folks refer to it as 220 however.

> Second of all, it IS widely used for repeater linking, packet backbones

Maybe they need to change the way they do it here in PA. I noted that some of the repeaters were used as links, but lot's of them had autopatches, so they were used as regular repeaters.

Maybe it's just an exclusive neighborhood. And they like it that way.

Amplitude compandered single sideband.

Invented and developed by Tommy Lott (*) and a mixed bunch of hams
and non-hams on 20 meters from his basement commercial testing labs
in northern California after he tried and failed to get major
commercial manufacturers to support his development efforts on
commercial two-way bands. The only ones he ever got interested were
MaCom and Aerotron, minor players in that field.

(*) who had the distinction of not applying for a US ham license
for decades so he could operate "reciprocal portable six" under a
Hong Kong VS6 call sign. He finally got a US license when the FCC
closed the door on such pseudo operations. I do believe that Tommy
is SK by now.

Bellsouth is excellent. We have the DSL package with Corp. discount
($39/mo.). We've had it since last December and it has never been down as
far as I can tell. D/L is always around 1.2Mb and upload is always around
250K. My son is a gamer so it gets a lot of use. I would recommend it if you
are in a Bellsouth area.

I may be naive to some law or regulation, as I'm not a ham, but all
amature radios that transmit below 30MHz do not require type
acceptance by the American FCC. Since the Galaxy radios are marketed
as 10 meter radios, not CBs which must be type accepted by nature of
the service, how can they possibly be illegal to sell in America?

I'm not arguing as to who those radio's are targeted at. I mean, a 10
meter radio that tunes in fixed incriments and has echo-no question
it's being marketed to the freebanders.

Just because you don't share the same concern about a particular
topic within the ARS doesn't mean that that topic isn't important
to others. I too have done my share of whining to the FCC about
bogus clubs getting Hawaii extra class callsigns. We have only 204
such calls* and many have somehow ended up in the hands of out-of-
state clubs, thus completely depleting the 2x1 pool for new extras
here.

But that would mean actually getting a life, Mr. Hog. How could someone like yourself say something that is so full of blasphimous. Oh. may the demons of ten codes and curse you with QRM and QRN. :-)
But honestly, there is somethig else being discussed on two meters besides ham rigs and the weather. Golly, I guess I'd better find all those boxes of radio's I have and see if they still work. I got tired of hearing old men dribble on about the rigs they just purchased or how they're going to call the police when they get home and report some kid in his pick up truck that was going 58 in a 55 zone. And people wonder why the hobbie is dying?

Jeffrey,

Have you done any whining about folks who glom onto scarce KH2 callsigns, even though they've never even been to Guam? Or about a fellow in KH6 who lent his mailing address to a guy from Rhode Island to glom onto multiple Hawaii club station and personal call signs?

I didn't think so.

And back in May of 1996, on rec.radio.amateur.misc Jeffrey
Herman says:

> I never left Hawaii.
> Now, I had planned on spending summer on Guam in order to
> teach, so I changed my FCC address to there. But at the last
> minute I received 3 courses to teach here and at Chaminade
> University.

I'm confused Jeffrey. Which of your conflicting stories is true, Jeffrey?

1) (May, 2001 version) You resided on Guam for a short time, and got a KH2
call;

or..

2) (May, 1996 version) You never left Hawaii, but "borrowed" the mailing
address of Dr. Perry at University of Guam, sorta like Deignan "borrowed"
your mailing address to get his KH6HZ callsign.

You are so full of crapola Oxendine that your eyes are
brown! Your lies do not scare anyone, least of all
truckers! But please do continue your ego mania
spew! The rest of us get quite a charge out of your
radio vigilante tantrums. Oh, and Riley says your
are one of the biggest whiners that continually calls him
about trivial nonsense. That figures!

Hams are allowed to make or modify a small limited number of rigs,
but mass produced rigs still need type acceptance from the FCC.
(Or whatever they call "type acceptance" nowadays).

You know when I posted my thoughts, I never expected a few folks to turn this into a flame war.. Can we concentrate our thoughts on the hobby rather than on personal vendettas?
If the cases you state are true then goto Riley, tell Riley that you do not like the abuses you see..
If Riley doesnt know what the ham community thinks then he cant act.
Lets help enrich our hobby
James

I don't doubt you could be a good coordinator, Larry. Past military NCO's do tend to be fairly good supervisors and managers. They often have experience supervising a fairly large, diverse, workforce, lending a more level-headed approach to their dealings with others. They often routinely dealt with unusual situations. And they were often expected to make quick, but defendable, decisions.

On the other hand, ex-military NCO's are also often pig-headed, opinionated, judgmental, overly-rigid, and somewhat zealous. Those who are able to temper these less desirable traits, and emphasize the more desirable ones, often do well managing people.

All very nice, but also very routine (most EC's do this). The problem is your jump to the next few lines...

> more people to get that experience.

This is where we disagree. In an emergency, you want your people in the jobs they do best. This is not the time to be worrying about the feelings of the individual ham. The mission has to come first, not some worry about making everyone feel welcomed or feel a sense of belonging. Certainly you want to rotate as many people as possible. But, if a person isn't good on the radio, now is not the time to hand him the microphone. There are other jobs that person can do. By the same token, if a person is good on the radio, that person should get the microphone as much as possible.

> Now, come up with some more whines and complaints.

There are no complaints, Larry - just a difference in style.

>You, Steve, Dwight,
>and Brian have been grasping at straws, trying to make this about
>my shortcomings as a human being.

These are the ONLY straws you leave, Larry.

Almost every post you have made on the subject has been ripe with
expressions of disgruntlement or frustration over them...not ARES as a program
or public service as a concept...Yet you have aggressively assaulted both in
your angst to get back at "them".

>If you made any kind of an
>attempt to get over that, perhaps you could contribute something
>constructive to this thread.

Whew! More advice that would be better taken by yourself, Larry! GET OVER
what ever dissing you THINK you took from "whoever" and move on !

If you TRULY want to be active in some aspect of public service,well, it's
out there. So you're former USAF MARS? Civil Air Patrol's communications
system can always use persons skilled in military type comms.

A bit less "military" but just as anxious to accept and utilize competent
help is the United States Coast Guard Auxiliary. Although most of thier
communications are on the Marine band, they do have their own repeaters in
places and must conduct air-to-ship communications. And considering your
proximity to the Atlantic, a bit more likely to be active.

By the way...The USCGAux was just awarded the USCG's CG Achivement Medal
for all hands who were active during the post-9/11 period. It's the only active
"civilian" auxiliary to be awarded an active duty award for it's service. I'd
say that's "recognition", which is what you seem to be looking for.

I intimately know CAP's HF nets, and am not aware if USCGAux has any, but
I am sure you'd be welcomed in either.

>If not, then move on, please.

Ditto. The "victim" angle is a bit worn and tiring.

I have never in my life degraded a no-code tech. They have and will contribute a great deal to developing and exploring the use of VHF and higher frequencies. Too many of us who have moved on to the other license classes actually neglect the possibilities inherent in this area.

However I am sick and tired of those few who attempt to degrade my license by wanting to have the same privileges I do but without earning them.

Because the FCC labs have determined that certain of those "10 Meter" radios
do not
met their requirements for sale in the US. There is a list of *most*
Galaxy and Connex
radios that are illegal because 1) "real" 10 meter radios do not have
frequency readouts AND
channel indices, 2) 10 Meter radios are normally "single-band" radios and do
not require "band"
switches, 3) They do not meet technical standards for spectral purity. AND
FCC is smart enough
to recognize the REAL market for these "fake" 10 Meter radios (wink wink)
whose sole purpose is
to circumvent the regulations, allow for higher than allowed output, and
provide coverage from 14-30 MHZ; hence the "band" switch.

Tell ya what fella: Go to www.arrl.org and click on Bulletins. Scroll down
to "Special Interest
Topics" and click on Enforcement. Then look at the bulletins around the 1st
or second week of
Sepetember where Mr. H. warned the Cheetah Transportation about unlicensed
operation. The
driver got fired over it. This warning is just one in a list that goes back
thru 2000. They have not
had the resources to go after this in a huge way, but lots of efforts are
being made to change that.
I don't have to "scare" anyone. The theft of frequencies, the rampant
operation of bootleg radios
on unauthorized frequencies WILL come to an end. All I am going to do is sit
back and snicker
everytime I read about one.

.............and I haven't talked to Mr Hollingsworth for over 2 months.

Tell ya what there Oxygoof. Here's what you do.
Take your fat butt over to the nearest interstate truck
stop. Go into the area where truck drivers set around
and talk or eat. You get up on a chair and say, "Hiya,
I'm Oxydol, and I'm gonna see that you truckers don't
use the wrong radios and freqs., and this here vigilante
arm band that Riley gave me gives me the right to get
you fired from your jobs, the jobs you guys and gals have
to feed your families. " After you do that, report back
here with what happened. We would particularly like to
know if the truckers, errrr, gave you an "attitude
adjustment." Now go run along asshole, and PLEASE,
get a life!!!!!!!!!!!
Oh, and Riley did say you are basically a little pissant
whiner whose always crying about insignificant bullshit.

I have never heard a No Code Tech threaten (over the air) to shoot anybody
nor do I know of any that have been told by Riley Hollingsworth to stay off
certain frequencies. Sound familiar, hmmmmmm Dan?

Uh, wouldn't you consider telling someone that you would "commandeer" their radio equipment in an emergency such a circumstance as "commanding" them or "ordering" them, Larry? Remember--way back--when you told me that in an emergency, you would commandeer my radio equipment?

As you your comments re: following a chain of command and following orders, it could be said that a net condition under emergency operations is exactly that. If you are the proponent of "effective" communications you say, it seems to me you'd have no problem understanding that concept. Of course, if you're busy "commandeering" radio equipment from other people, I suppose that could be taken to mean that you don't have a real polish for being able to operate under net conditions in an emergency.

>

Yeah, you've already got one of those many positions that people have
self-appointed themselves to.

> 73 de Larry, K3LT

Then you've totally gone out on your own and disregard one of the best
services that amateur radio has the capability to provide.

Well, it's quite obvious that any growth for the ARS is not one of your
passions, Larry.

I think you're wrong on your observation for the potential of someone to
have an edge on communications structure in ham radio, if they've come into

the ARS with some public service background. The ARS net conditions emulate those of public service agencies--and it makes great sense to that so that we are familiar with the emergency communications style and protocols of those we serve. This is true so much so that the incident command structure, popularly used in public service agencies, is of great interest and benefit to the ARS.

Still taking an EXTRA STEP opening the Windows folder? Who knows why Bill Gates did this, but it is easy to eliminate the extra step.
Open the Windows folder and click on View and Customize This Folder. Click on Remove Customization spot and click Next twice and you are done. This also works for the System folder.

Ho ho ho. Typical dribble from Larry Roll. Criticism, scorn, reluctance and disrespect but nothing in the way of one teeny tiny bit of anything constructive. Sits on the edge and scorns, criticizes and diminishes, but does *nothing* to attempt change.

Larry:You keep making this really stupid assertion, noted above, that amateur radio operators stick their noses into the business of professional emergency service providers. I remind you that in order for the amateur radio service to be involved with public agencies--whether through ARES or RACES--it is *AT THE REQUEST* of those very agencies!!

The term wannabe is one you keep using. You keep applying that to the people who are already involved and routinely providing communication services that were *AT THE REQUEST* of the served public agency. *WHAT* is so "wannabe" about that?

You keep saying that public agencies don't want the aid and service of the ARS. Then why is the ARS looked to by so *many* served agencies who desire to provide leadership, training, and mentoring skills so that the ARS can, in turn, provide effective communication services *AT THE REQUEST* of those public agencies?

You are really skewed on this latest thought diarrhea of yours, Larry. I think the sentiment that you "have no use for" emergency communication--along with other similar thoughtless comments you've made pertaining to same--definitely makes you the wannabe.

You mean the TWO VX7's right? It was interesting to see them light up
when you key up on the frequency they were set on, while under water.

> You and your friends must have very selective sight!

They disappeared becasue RH was paying a visit to the Hamvention the
year before, and the amp kit vendor got told they better not show up
again, the kits, by the field agents. All one had to do was stop by
their table and ask them about their visit from the FCC. Several
people wanted a kit and wanted to know why they weren't there any
more. There may have been other amps elsewhere, but they were NOT in
the tent area anymore. Even some of the CB shops with tables had their
"questionable" wears gone that year too. Seems like the word got out,
and nobody wanted to get busted.

>dealt with unusual situations. And they were often expected to make quick,
>but defendable, decisions.

Dwight:

I thank you for those observations. As it happens, I consider myself to
have earned my entire pension in my first two years I was stationed in Germany,
where I did all of the above, and much more. Moreover throughout the
rest of my career, I was faced with taking over management of programs
which needed to be "put back on track" due to the ineptitude of my
predecesors. So much, in fact, that in my second tour in Germany my
Commander made me NCOIC of his Squadron Management Staff in order
to get our Disaster Preparedness programs and our Ancillary Training
program back up to Air Force and AMC (then MAC) standards. I succeeded
in doing so, and "turned around" our programs to the point where we went
from "Marginal" to "Outstanding" ratings in command-level inspections.
Then I went to the Air Force Academy and did the same thing to sort out
the entire Passenger Transportation department, which, before I got there,
didn't even have a regulation file plan, due to the indifference of the low-
level civilians who were "managing" the program before I got there.

> On the other hand, ex-military NCO's are also often pig-headed,
>opinionated, judgmental, overly-rigid, and somewhat zealous.

If, by that, you mean that we want to do things the right way, getting
the right results, and making the most efficient use of our resources,
then I'll have to say I resemble that remark -- since I was accused of
all of the above at different times.

>Those who are
>able to temper these less desirable traits, and emphasize the more desirable
>ones, often do well managing people.

Perhaps, when they produce results where none had been forthcoming
in the past, those traits aren't as "undesirable" as you may think!

>> And one thing I would make sure of is that any and
>> all radio amateurs with an interest in Public Service
>> and ARES were welcomed with open arms, given good

>> adjusted to permit a change of faces and to allow
>> more people to get that experience.
>
>
> This is where we disagree. In an emergency, you want your people in the
>jobs they do best.

I wasn't necessarily talking about a real "emergency" situation. I
was talking about routine drills and exercises, which are far and away
the more typical opportunity for local hams to participate. It is THEN
that I would get people "up to speed" so when the real thing did come,
we would have better flexibility, and not dependent on the same
people to do the same thing, and having everyone standing around
with a donut in one hand and a cup of coffee in the other, not knowing
what to do if the "guy who always did that" doesn't show up for
some reason.

>This is not the time to be worrying about the feelings of
>the individual ham. The mission has to come first, not some worry about
>making everyone feel welcomed or feel a sense of belonging.

I agree, but we had damn well better "worry" about the "feelings" of
prospective ARES members when they show up for a drill, and find
that there is absolutely nothing for them to do because the same
obese lout who presses the PTT switch five seconds after he starts
talking is still occupying his old, familiar, overstressed chair.

>Certainly you
>want to rotate as many people as possible. But, if a person isn't good on
>the radio, now is not the time to hand him the microphone.

Doesn't matter, he'll still find a way to snatch it away from whoever
tries to pick it up.

>There are other
>jobs that person can do. By the same token, if a person is good on the

>radio, that person should get the microphone as much as possible.

Well, to do that, he'd need a crowbar to pry it out of the 350-lb.
gorilla's hands, and some Formula 409 to clean off the donut jelly,
pizza sauce, and coffee stains before he could handle it.

>> Now, come up with some more whines and complaints.
>
>
> There are no complaints, Larry - just a difference in style.

I'm a trained manager, and I tend to think like one. I also have
a formal education in personnel management. Therefore, I see
the value in developing "human resources," like ARES team
members, by giving them equal exposure and experience, as
opposed to permitting the same old people to do the same job
only because "that's the way it's always been." I don't know,
maybe my expectations aren't realistic, considering the
"amateur" nature of what we do. But I see no reason why that
should be true.

>expressions of disgruntlement or frustration over them...not ARES as a
>program
>or public service as a concept...Yet you have aggressively assaulted both in
>your angst to get back at "them".

My eyes are glazing over here, Steve -- define "them."

>>If you made any kind of an
>>attempt to get over that, perhaps you could contribute something
>>constructive to this thread.

I have nothing to "get over, " Steve. I have come to terms with my potential role as an emergency communications provider, and unless or until I find an environment when I feel like my services are needed and wanted, and actively encouraged by those I'd be serving with, I'll settle for the status quo. The point of my thread is this: Based on my personal experience, and the fact that I've received feedback which leads me to understand that my "problems" are more widespread than you or anyone else who is active in ARES will admit, that our value as Emergency Service Communications Providers leaves a lot of room for doubt -- at least in my mind.

> Whew! More advice that would be better taken by yourself, Larry! GET
>OVER
>what ever dissing you THINK you took from "whoever" and move on !

I haven't said that I would be adverse to "moving on" or even trying once again to be active in ARES. Problem is, it is unlikely that I'll find that anything has changed from what I've previously experienced.

> If you TRULY want to be active in some aspect of public service,well,
>it's
>out there. So you're former USAF MARS? Civil Air Patrol's communications
>system can always use persons skilled in military type comms.

Problem with that is CAP in these parts is becoming a thing of the past.

> A bit less "military" but just as anxious to accept and utilize
>competent
>help is the United States Coast Guard Auxiliary. Although most of thier
>communications are on the Marine band, they do have their own repeaters in
>places and must conduct air-to-ship communications. And considering your
>proximity to the Atlantic, a bit more likely to be active.

The local Coast Guard station was closed a couple of years ago, and the
area of responsibility moved elsewhere.

> By the way...The USCGAux was just awarded the USCG's CG Achivement Medal
>for all hands who were active during the post-9/11 period. It's the only
>active
>"civilian" auxiliary to be awarded an active duty award for it's service.
>I'd
>say that's "recognition", which is what you seem to be looking for.

Except that I'm not necessarily looking for recognition, which has been
my whole point. My "problem" is/was with those who wanted to hog the
spotlight for themselves. All I wanted was to have something to do
whenever I showed up.

> I intimately know CAP's HF nets, and am not aware if USCGAux has any,
>but
>I am sure you'd be welcomed in either.

A problem there is I'm not an HF phone operator, due to my low-profile
station conditions.

>>If not, then move on, please.
>
> Ditto. The "victim" angle is a bit worn and tiring.

Steve, I'm not claiming "victim status." I've been trying to give light
to a problem which causes people to be discouraged when they try to
get involved in Public Service. As I've said before, stop taking it
personally, and recognize that a problem does exist, whether or not you
have experienced it personally. You're too wrapped up in K3LT-bashing
to see the point I've been making. Leave the bashing to Kim -- at least
I don't have to bother myself responding to her. You're still deserving
of my time, so let's make better use of it, shall we?

No, Kim, actually, the way I was treated most times I tried to participate
in ARES ended up making me a "Don't Wannabe." Unfortunately, my
experiences are not unique, either -- and THAT's the problem here.

Oh, come on, Larry. That sounds like an excuse to ease your conscious over your own lack of involvement in public service related activities. If you really wanted to do something in that regard, you darn sure wouldn't let something as trivial as someone hogging a microphone stop you.

Besides, on a more humorous note, the lack of a microphone shouldn't bother a CW freak like you at all. Instead, you could sit beside the fellow with the microphone and just tap out the messages on the tabletop with your finger.

By the way, I noticed you've picked up a vanity callsign. Didn't you use to rant against vanity callsigns?

>>it's
>>out there. So you're former USAF MARS? Civil Air Patrol's communications
>>system can always use persons skilled in military type comms.
>
>Problem with that is CAP in these parts is becoming a thing of the past.

More lack of attention to current events and details, Larry.

First trivia Question: Other than a few medical helicopters, what was the only civil agency allowed to operate during the shut-down period status post 9/11?

Second trivia question: Which civil agency was called upon by FEMA and the NY EMA to fly post-incident damage assessment at WTC?

Third trivia question, What civil agency flew suppost missions from as far away as Georgia and Illinois to bring SAR dogs and other disaster relief materials to WTC?

(Hint...Hint...All three have the same answer..."Jeopardy" 60 second jingle now playing...)

>> A bit less "military" but just as anxious to accept and utilize
>>competent
>>help is the United States Coast Guard Auxiliary. Although most of thier
>>communications are on the Marine band, they do have their own repeaters in
>>places and must conduct air-to-ship communications. And considering your
>>proximity to the Atlantic, a bit more likely to be active.
>
>The local Coast Guard station was closed a couple of years ago, and the
>area of responsibility moved elsewhere.

Excuses, Larry. Excuses. CG Auxiliary Flotillas, like CAP squadrons, are NOT dependent upon a federal DoD facility for a place to operate from.

>>By the way...The USCGAux was just awarded the USCG's CG Achivement
>Medal
>>for all hands who were active during the post-9/11 period. It's the only
>>active
>>"civilian" auxiliary to be awarded an active duty award for it's service.

>>say that's "recognition", which is what you seem to be looking for.
>
>Except that I'm not necessarily looking for recognition, which has been
>my whole point. My "problem" is/was with those who wanted to hog the
>spotlight for themselves. All I wanted was to have something to do
>whenever I showed up.

The point was that the CG Aux is very active and mission-oriented. As for having something to do, well...you've been given options and all YOU have given is excuses as to why one after the other "won't work".

>>I intimately know CAP's HF nets, and am not aware if USCGAux has any,
>>but
>>I am sure you'd be welcomed in either.
>
>A problem there is I'm not an HF phone operator, due to my low-profile
>station conditions.

So who said you had to use YOUR station, Larry? CG Aux Flotillas and CAP units DO have their own stations, Larry....

>Steve, I'm not claiming "victim status."

There are some things you don't have to "claim" in order to manifest yourself in them. You've done a better than average job of putting yourself at the bottom of the pecking order here, Larry.

>You're too wrapped up in K3LT-bashing
>to see the point I've been making. Leave the bashing to Kim -- at least
>I don't have to bother myself responding to her.

Larry, outside of this, have we ever really "bashed" together? Occassionally disagreed, yes. THIS time I think you are wrong....WAAAAAAY wrong, and your own words support my contention.

As for Kim...well...I know love when I see it! You remind me of an aunt and uncle I had who could never say a civil word to each other, but when she died from a stroke, he was right behind her...He cried for 30 days straight when she checked out.

>You're still deserving
>of my time, so let's make better use of it, shall we?

I'm glad you think so. Shall I send you the addresses of local CAP units and CG Aux flotilllas to see if you can find a program you like?

On this I have to back Larry 110%.

All too often military NCO's are envisioned as either dictatorial
sado-masochists swaggering up and down long rows of scared stiff recruits, or
are enviosned as under educated officer-wannabes who couldn't hack the
education.

The facts are that Armed Forces NCOs in ALL branches are held to
extrememly high standards. We are required, in most cases, to have a far wider
mastery of our specialties than the oficers appointed over us, and we are fully
expected to be able to function without those officers when the need arises.

It was due in part to that characteristic of individual functionality that
made the United States Armed Forces the lynchpin in the west's longevity over
the Warsaw Pact.

>Doesn't matter, he'll still find a way to snatch it away from whoever

Sounds like you have one particular 350 pound gorilla, Larry, NOT the
entire ARES organization in particular or public service communications in
general in mind......so let's not continue to characterize them as such, eh...?

No code-tech may very well rule. For those that want to gain technical competency, may not have bothered with Morse Code.

Many that did, may have just memorized the questions towards Extra.

The higher licence class should actually mean those individuals achieved a higher level of competency.

We have seen rationalizations and meaning stripped away in our educational system, and the workplace. Why should amateur radio be any different?

In my most humble opinion, and re: Larry's post regarding his "successes"
while in the military, are not attributable at all to the nature and
character of good leadership. My impression, given Larry's nature,
psychology, and character in this newsgroup [which is the only basis I have
from which to form my impression] is that, if Larry succeeded with any
project he was given, it was due to his single-handedly achieving it--not
because he inspired any group or provided good mentoring. And, nearly
anyone who has a grasp of the task at hand can achieve high success on their
own--there is no magic in that. Hell, in the diatribe itself, he mentions
that it was "he" that achieved the goals and successes. He never mentions
nor gives credit to any team or anyone else but him.

If Larry acts in real life the way he does in this newsgroup, I can assure you that no one would be *glad* to be working with him on anything, nor would anyone look to Larry as any kind of inspirational person. Larry's claim to having expertise in personnel management is a good example of why booksense is no more than someone's ability to read well. Someone forgot to teach Larry the people skills it takes to be a real leader.

I think you might have hit upon the truth Kim. It is always Larry
on his own who achieves the goal, everyone else involved, in his
opinion, are incompetent idiots and he along is the only one who
can accomplish the goal. He obviously is not a team player, it is
all me, me, me, so no wonder he doesn't fit in where it takes
teamwork to accomplish something. In the Air Force he was in a
position to give orders that others had to take, like it or not,
but when it comes to ham radio emergency services, Larry can't
give all the orders, would possibly be expected to even take a few
orders, and if he can't be the one to give all the orders then he
won't play.
Frankly ham radio emergency services haven't lost anything by
having Larry not participate.

>to rant against vanity callsigns?

I'm glad you finally noticed the Vanity Call Sign I've held since 1997. What
I probably ranted against was No-code Techs getting old-timey sounding
Vanity Callsigns or people getting out-of-district call signs, both of which I
think are undesirable consequences of the Vanity Call Sign program.

Just a thought. The argument is that it isn't being used. I suggest the hams buy diesel cars/truck and simply visit the truckstops and siphon off 20 gallons of fuel at a time. Heck, the driver isn't using the fuel! Here are the arguments.
1) driver - I paid for the fuel
1) ham - I paid for my license in time and money. I paid for the legal equipment to enjoy my hobby.
2) driver - I will need to use that fuel.
2) ham - I may have wanted that frequency and will in the future.
3) driver - you're stealing!
3) ham - and you are doing what?

This, of course, can go on and on ad nausem. So, guys, do what they do - go help yourselves, they don't care!

On Sun, 27 Oct 2002 14:52:15 -0500, "Jim Hampton"
<aa2qa@frontiernet.net> was blabbling:

...Just a thought. The argument is that it isn't being used. I
suggest the
...hams buy diesel cars/truck and simply visit the truckstops and
siphon off 20
...gallons of fuel at a time. Heck, the driver isn't using the fuel!
Here are
...the arguments.
...1) driver - I paid for the fuel
...1) ham - I paid for my license in time and money. I paid for the
legal
...equipment to enjoy my hobby.
...2) driver - I will need to use that fuel.
...2) ham - I may have wanted that frequency and will in the future.
...3) driver - you're stealing!
...3) ham - and you are doing what?
...
...This, of course, can go on and on ad nausem. So, guys, do what
they do - go
...help yourselves, they don't care!
...
...73 from Rochester, NY
...Jim

Of course, where I'm from, doing this sort of thing, would get your
ass shot and killed.

not very smart.

Id be willing to bet the bootleggers had some serious trouble operating above 28.3 this weekend...it was wall to wall with dx and stateside contesters. Heard a couple feeble attempts at a AM qso by a couple of truckers around 28.320 or so. They didn't last long.

This is what we need guys and gals...Utilize ten meters and dump on these fools.

<SIGH> & your point is?

Soooooooo... you rocket scientist's have come to the brilliant conclusion
that because this person or the handful of people who have been taped used
those freq's spoke like they did.......means that all drivers do?

That'd be like me saying that since one of you big strapper radio fella's
was stupid enough that while putting up your antenna you got fried..... all
of you fella's are just down right stupid.... right?

Jerry The Troll made no reference what-so-ever to _ANY_ recorded message or
anything else that makes you people sprout wood, when he posted his
bullshit. He was trying to create some kind of come back when someone summed
him up as a crybaby.

No, of course not all hams nor truckers are whatever. In fact, the post I made earlier concerning siphoning fuel from truckers was harsh (and drew exactly the response I expected) - the problem is the easy availability of the radios. Kinda like the gun laws. Obviously, we have the right to bear arms, but when you get a fruitcake like the sniper, it will tend to bring out a lot of harsh words. The fact is that 10 meters is an international amateur band and more than a few hams don't care for intruders. Funny, no one wants to build export radios for 88 - 108 MHz FM. Gee, nice and clear up there too. I wonder why they don't ....

Brian:

Jump back, Jack! I don't recall blaming you, personally, for the failure of
the Packet Radio promise made by the No-Coders in the 80's and 90's.
However, it did happen. Any mention of CW would cause the unbathed,
pony-tailed burnouts with the little round eyeglasses to start lecturing how
Packet Radio would be the salvation of Ham Radio and carry Ham Radio
"into the 21st Century." Well, here we are, and Packet Radio isn't even
on the radar screen anymore. I keep seeing TNC's being advertised,
but they must be being used strictly for local work and DX Cluster,
etc.

There are plenty of ways to create and sustain a Packet Radio backbone
which could, theoretically, span the country in all directions. However,
creating it would require genuine leadership from the American Radio
RELAY (there's that inconvenient word in all caps again!) League,
starting at HQ and followed through by the Field Organization. It's not
too late to get the ball rolling on something like this. Anyone interested?

Relevant? My point was 1) there is a problem. Yes, some truckers and some radio shops have been popped.

2) the fact that some have been busted tells some of us there is a problem. Jerry just gets vocal about it, but doesn't spam with some of the sexual innuendo that the anonymous posters do. At least give him credit for saying what he thinks without hiding his identity.

I note one gentleman didn't care much for my idea of siphoning fuel from trucks. Can't say that I blame him, but you can't blame Jerry either for being vocal about siphoning frequencies.

To say that all truckers are doing this is just as stupid as saying all CBers run illegal frequencies/radios. Not true. The point is that once you hit 28.000, there are going to be some folks that get upset. As I suggested earlier, try running a couple of hundred watts between 88 and 108 MHz on FM. A lot of nice and clear spots up there, plus the antennas are smaller (plus you can get a gain antenna). Somehow I think you'd get some other folks upset if you did. Unfortunately, when CB was created back in the 50s, UHF radios were **very** expensive. 30 MHz was about as high as one could build a relatively inexpensive radio with any kind of performance and 27 MHz became the place to go - along with F layer propogation at times during the sunspot cycle. Beyond that, sporadic E occurs quite a bit as well. None of the flames would be occuring if CB was up on high band VHF or UHF. MURS can offer good communications essentially without interference and likely offer more local range than a stock cb can; unfortunately, if all of the cb community tries to move there, there won't be enough channels. That said, 10 meters is NOT an extension of the cb band.

I`m a trucker and I use 10 meters! I`m usually gone for weeks at a time. The first thing I do when I leave my company`s grounds is to hook up my Uniden 2510 and swap their cb antenna with my 10 meter cut antenna. This process takes no more than 5 minutes and I put everything back like it`s supposed to before I return. Considering their is two cb antenna`s on my truck I keep that one that`s left hooked up to my cb so I may use the cb when I need too. Same thing goes with my vhf & uhf radio. This may be against company policy but it is not illegal considering I possess a general class ham radio license. There is no way my company can catch me in the act unless I crash and burn, if that happened it would be to late to fire me, I would be dead. I have had heard illegal transmissions on 10 meters but from what I heard it was from Mexican truck drivers, wait till NAFTA opens the borders to them. Now your really gonna hear alot of illegal transmissions!

2293. ARNewsline 1315 - Oct 25 2002

Newsgroup: rec.radio.amateur.policy
Date: 2002-10-28 05:39:04 UTC
From: radionews@aol.com
Message-ID: <20021028003904.28678.00001348@mb-mv.aol.com>
Source record: 54109

Amateur Radio Newsline™ #1315 – October 25 2002

Amateur Radio Newsline™ report number 1315 with a release date of Friday, October 25 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham radio operator may have played a part in the apprehension of the DC sniper suspects, the U-K says no more new operators in its 5 megs experiment and the ARRL says no to unlicensed visitors sharing a United States ham radio band. These stories are first on Amateur Radio Newsline report number 1315 coming your way right now.

**

RESCUE RADIO: HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men wanted in connection with the sniper shootings in the Washington DC area. ABC News interviewed the trucker who called the police to report he had spotted the two suspects. When asked how he heard about the description of the vehicle, his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is Dale Sommers; callsign WB6OM. Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station. His show is mainly music and information of interest to long-haul truck drivers. The description of the wanted men was just that. As a result the pair are in custody thanks to a trucker who was paying attention to what WB6OM had to say as “Truckin Bozo” over WLW in Cincinnati. (K7JA)

**

INTERNATIONAL: NEW PERMITS FOR THE UK 5 MHZ EXPERIMENT GOING ON HOLD

What happens when a propagation experiment gets a bit to popular? If you are a telecommunications regulator in the United Kingdom you might be inclined to temporarily suspended issuing further permits for hams to take part. And that’s what’s about to happen in regard to the United Kingdom’s 5 Megs experiment. From Nottingham England, here’s Jeramy Boot, G4NJH:

--
The Radiocommunications Agency says that applications for 5-MHz band experimental Notices of Variation or NoV’s have far exceeded their expectations. The R.A. now considers that the risk of congestion on the five spot frequencies allocated may be detrimental to the overall success of the experiment.

Accordingly, the RA has decided not to issue any further NoV’s for applications received after the 31st of October. The position will be kept

under review and occupancy monitoring of the frequencies will be carried out. It is hoped that ollowing this exercise - more NoV's could be issued, or a numerical limit to the number of NoVs can be set based on usage and congestion. It is likely that an announcement can be made later this year for action early in the new year.

Jeramy Boot, G4NJH.

--

The United Kingdom 5 MHz experimental band was made available to that nations individual Full Class A hams by means of a Notice of Variation issued last July. The five 3kHz-wide frequency allocations are permitted for the purposes of antenna and propagation experiments. The Radio Society of Great Britain is in charge of the overall management of the project. (RSGB)

**

INTERNATIONAL: AN IARU UPDATE FROM PRESIDENT LARRY PRICE W4RA

Still in the international arena, we have a follow up to last weeks story on the International Amateur Radio Union. With it, here's our producer Bill Pasternak, WA6ITF:

--

We received a very nice note from International Amateur Radio Union President Larry Price, W4RA, following last weeks story about the recent meeting in Morocco. According to President Price, the news isn't the IARU observer status at Plenipotentiary Conferences. He tells Newsline that IARU has had this status since the 1998 Conference in Minneapolis. At that time the International Telecommunications Union Convention rules were modified to give the same privileges at Plenipotentiary Conferences as IARU already had at Radio Conferences.

President Price says that the real news was the special station, CN8UIT set up at the conference center in Marrakech. He says that this was a follow on from a similar station set up by the ARRL in Minneapolis and one eight years ago in Kyoto, Japan from the JARL.

Buy the way, the CN8UIT call is based on the French pronunciation of the International Telecommunications Union. For those of you unaware, the International Amateur Radio Union was founded in 1925 specifically to represent our service at international conferences. It has done so -- with great success -- ever since.

With a thank-you to IARU President Larry Price, W4RA, for that neat note, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

In his note to us President Price says that the IARU has taken part in every major conference in modern years. Also that it will be there for all of us at WRC 2003 in Geneva Switzerland. (ARNewsline™)

**

INTERNATIONAL: ARRL ASKS FCC TO DENY US USE OF EUROPEAN/UK FRS-TYPE RADIOS ON 70 cm

The ARRL is saying no to visitors using unlicensed radios in our ham bands. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL has asked the FCC to deny a petition that would set aside spectrum in the 70-cm ham band for non ham use. This, for use by visitors from Europe and the United Kingdom to use their Personal Mobile Radio transceivers while in the U-S.

According to the ARRL Letter, the request was filed by Dr. Michael Trahos, KB4PGC of Alexandria Virginia. It asks that European PMR 446 type handie-talkies be allowed to operate license free while overseas travelers were in United States jurisdiction. PMR 446 hand-helds are similar to the US Family Radio Service transceivers but operate on eight channels between 446.0 and 446 .1 MHz. at up to a half watt out.

In his Petition, Trahos said that existing Part 97 Amateur Service rules precluding the use of PMR 446 radios in the US were essentially unenforceable and that granting his petition would have minimal impact on existing amateur operations. The ARRL countered by saying that there are obvious enforcement problems associated with the Petition. It says that putting the unlicensed users on a ham band is a formula for serious interference problems to be created.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.
--

As an alternative, the ARRL recommends that European and UK visitors simply purchase inexpensive FRS transceivers to use during visits to the United States. (ARRL)

**

Break 1

(5 sec pause here)

**

RADIO LAW: FCC REJECTS AMATEUR'S PETITION FOR RECONSIDERATION ON CC&R ISSUE

The FCC has turned down a Petition for Reconsideration filed by a Florida amateur. This, of the Commission's 2001 decision to deny the ARRL's Application for Review in RM-8763. That proceeding concerned the League's effort to have the Commission include privately imposed deed restrictions under PRB-1.

The ARRL says that the FCC dismissed its Application for Review last December 18th. At that time the FCC noted that PRB-1 more than adequately protects federal interest in promoting amateur communications from overly restrictive regulations.

Not long after, W. Lee McVey, W6EM, of Bradenton, Florida, filed his own Petition for Reconsideration Mc Vey claimed that it presented additional evidence that the FCC had not considered in dealing with the ARRL's petition. But the FCC disagreed. It says that McVey offered up no new evidence in the matter and has turned his petition away. (ARRL)

**

ENFORCEMENT: INDONESIA PIRATE UPDATE

An update now to our recent story on the problems being caused by pirate stations in Indonesia. Not only are they making life difficult for hams around the world. The pirates are also playing havoc with domestic Indonesian ham radio communications as well. With more, heres Q-News Graham Kemp, VK4BB:

--
Many reports covering Indonesian non amateurs using our frequencies in the 40, 20 and 10 metre bands are making their way to the IARUMS. There seems absolutely no control over their working and existence by the local Government.

It is very difficult for licensed Indonesian amateurs to find a clear frequency in the lower edges of 40mb for their authorised cmmunications. Generally the licensed Indonesians are around 7050,7055 and 7060 kHz for their traffic. 7050 kHz frequency, carries CW lessons for the intending future amateurs. Otherwise, the licensed ones, operate in their own nets and you can clearly identify their call signs in between, as per standard practice, though the entire conversations are in Indonesian.

Another frequency regularly used by a SE Asian group for two-way non amateur communications is 14044 J3Eu mode around 0100 UTC every day. IARUMS need the services of those knowing SE Asian languages to identify them, they may be from XV, 3W or XU area.
--

If you are a resident of South-East Asia and heating this newscast, you are requested to watch 14.044 MHz and help identify the unlicensed users. Please send that information to your nations Intruder Watch Coordinator as fast as you can. (Q-News)

**

ENFORCEMENT: PIRATE BOARDCASTING IN SAN DIEGO CA

Back here in the U-S-A, Bob Gonsett’s CGC Communicator reports on an entity calling itself Free Radio San Diego which announced plans to begin broadcasting on on 96.9 MHz.. The transmitter location and parameters are unknown but one person reports being in the town of Carlsbad California and seeing a spray-painted stenciled sign on the concrete walkway promoting Free Radio 96.9. Also, the operator of the station does have a web site at

www.pirate969.org What action the FCC may be planning on this one is unknown. (CGC Communicator)

**

ENFORCEMENT: BE CAREFUL ON 146.52

The has FCC issued and then retracted advisory notices to five Mid-West hams telling them that they were talking to long. This, on the national calling frequency of 146.52 MHz.

The letters said -- and we quote: “The frequency 146.52 MHz is customarily used, and is called for under the band plan, as a simplex calling frequency for Two Meter operation. Numerous communications from your station during the above dates have lasted from nearly half an hour to an hour. While band plans are not mandatory under the Commission’s rules, the Commission depends upon them to minimize the situations in which Commission intervention is required, and they comport with good Amateur practice under our rules. Please review Section 97.101 of the Commission’s rules” -- end quote.

The FCC origionally said that the October 16th letters went out following a review of complaints about the operation of their Amateur stations between September 19th and October 6th. The retraction was issued on Wednesday October 23rd. No reason was given for the withdrawal. (FCC)

**

ENFORCEMENT: FCC JUDGE FAVORS SCHOENBOHM'S RETURN TO AMATEUR RADIO

The ARRL reports that an FCC Administrative Law Judge believes the regulatory agency should permit Herbert L. Sahoenbohm to once again hold an Amateur service license. In rendering his decision, Judge Arthur I. Steinberg says that he believes Schoenbohm now appears to hold the requisite character qualifications to be a Commission licensee.

The FCC had designated Schoenbohm's license renewal application for a public hearing. This based on character issues stemming from a 1992 conviction and alleged lack of candor during subsequent FCC hearings on the matter. The former KV4FZ lost his bid to renew his ham ticket in 2000. He applied for a new license in 2001 which lead to the recent recommendation by Judge Steinberg. A final decision on whether or not to re-license Schoenbohm now must be made by the FCC itself. Schoenbohm has also passed an Extra class exam that is also pending. (ARRL, FCC)

**

THE INTERNET: DENIAL OF SERVICE ATTACK THWARTED

What investigators are calling a sophisticated and large-scale assault against the World Wide Web has been thwarted . But not before nine of the thirteen servers that manage global Internet traffic were crippled for a short time on Monday October 21st.

The FBI's National Infrastructure Protection Center said that it was aware of the denial of service attack and is addressing this matter. Service was quickly restored after managers put defensive measure in place bringing the attack to a halt. Most Internet users did not even notice the hour long attack whose origin is still not known. (WebNews)

**

ON THE WEB: TECH NOTES GOES HIGH TECH

You have hears us credit it here on Amateur Radio Newsline. Now, Larry Bloomfield's broadcast industry publication Tech-Notes is available on the World Wide Web in a new easy-to-read format. Larry has adopted HTML scripting which permits him to publish pictures, logos and diagrams. And you will always have lots about digital and high definition television and much more. You can check it out on-line at www.Tech-Notes.TV. (Tech-Notes, CGC)

**

NAMES IN THE NEWS: PAUL BLUMHARDT, K5RT, JOINS CQ STAFF

Paul Blumhardt, K5RT, has joined the staff of CQ Communications, Inc. as Director of New Business Development. Blumhardt, of Rowlett, Texas, will oversee efforts to broaden the base and the scope of the company's marketing activities.

According to publisher Dick Ross, K2MGA, Blumhardt has actually been part of the CQ "family" for the past three years, serving in a volunteer capacity as Worked All Zones Award Manager. Blunhardt holds an Extra Class amateur license, a commercial FCC General Radio Operator License and degrees in both engineering and business. Among his personal operating achievements are 5-Band Worked All Zones, 5-Band DXCC, 6-Band Worked All States, and #1 DXCC Honor Roll.

As all of you are aware, CQ Communicatoins publishes magazines, books, videos and other materials for the amateur radio and hobby radio fields. They are also a co-corporate underwriter of the annual Young Ham of he Year Award. (CQ)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

(5 sec pause)

**

THE WAR ON TERROR: A BANNER AND A LINK

Pieter Wycoff, KG4UPX, says over the Internet that he has found an important tool that every concerned ham should have on his or her personal website. Wycoff says that the Homeland Security Knowledge Database has a banner that can be posted to any website notifying visitors of the current status of alert to

terrorist threats.

The site also contains lots of other information relevant to homeland security and how you can play a part. You can even sign up to receive threat notification updates by e-mail. To learn more on how you can add this feature to your ham radio website, take your web browser to http://www.twotigersonline.com/resources.html.

And for those not aware, right now the nation is under color code Yellow which indicates an elevated level of alert. (Via Internet)

**

CONVENTIONS/HAMFESTS/CONFERENCES: AMSAT IN FT. WORTH IN NOVEMBER

The 20th annual AMSAT Symposium will be held November 8th to the 10th in Fort Worth, TX. The gathering actually kicks off with an Early Arrival Activity on November 7th and ends with the conclusion of the Board of Director's Meeting on the 11th. More information is in cyberspace www.amsat.org. (ANS)

**

SATELLITE NEWS: FCC DECLINES TO APPROVE ECHOSTAR-DIRECTV MERGER

The FCC has declined to approve the transfer of licenses from EchoStar Communications Corporation and the Hughes Electronics Corp. subsidiary DirecTV to form a new business entity. The FCC said that the companies did not demonstrated that approval of the transaction will serve the public interest,convenience, and necessity. The complete story is on the web at www.fcc.gov/Daily_Releases/Daily_Business/2002/db1010/DOC-227263A1.doc (CGC)

**

HAM RADIO IN SPACE: SOYUZ ACCIDENT SOLVED

A Russian state commission has set October 30th as the launch date for a Soyuz rocket carrying a three-person crew to the International Space Station. The decision was made after investigators determined that it was a probably a production glitch rather than faulty design which led to the October 15th crash of a similar launch vehicle.

For a while, it appeared that ham radio operations and everything else on the International Space Station might come to a grinding halt. Russia had threatened to suspend resupply launces following the mishap with the unmanned Soyuz ship which exploded seconds after liftoff, killing one person on the ground and injuring 20 others.

Such a delay would have had a devastating effect of future habitation of the space station. This is because the current emergency evacuation lifeboat vehicle is fast approaching the date on which it must be replaced. Only a Soyuz launcher can carry the replacement lifeboat to the ISS. If the Soyuz launchers had been kept on the ground, operations on the ISS might have been suspended. Thankfully, that wont be the case. (Published news reports)

**

INTERNATIONAL - RUSSIA: HELP LETTER MAY BE PHONY

A electronic letter purportedly from a Russian ham asking for financial assistance may be a phony. Then again, maybe not.

The letter showed up in hams mail boxes and on the numerous Internet news groups beginning on October 18th. Signed by a person calling himself Valentin, the note asks for donations of money and other gear. What has made many suspicious is that the writer never gives his call sign and does not use any ham radio terminology.

A number of people believe that the letter was actually sent by a spam-mail generating company or someone with a program that harvests e-mail addresses from the World Wide Web and generates automatic e-mail to them. There is even some speculation that the message did not come from Russia as the note itself claims.

Then comes a posting to the QCWA remailer from Lee Manning AK7T. Manning says that he e-mailed the writer of the message. Valentin replied that his callsign is RA3XAA. According to international call sign listings, RA3XAA belongs to Valentin Mikhaylin in Kaluga Russia. We have e-mailed him and are waiting to find out if he is the person who issued the letter and how he was able to get so many e-mail addresses of United States hams.

Meantime you might want to keep in mind two words. Caviat Emptor. Buyer -- or in this case -- giver beware. (QCWA Remailer, others)

**

INTERNATIONAL - THE NETHERLANDS: AUCTIONS NOT MANDATORY

Media Network says that a judge in Rotterdam has ruled that the next Dutch government will not be required to auction the commercial radio frequencies to the highest bidders. The ruling on Friday October 11th will impact on future spectrum auctions in that nation. (Media Network)

**

DX

In DX, GB2EVR is a new permanent special event operation for the Eden Valley Railway in the U-K. The station is located at the Warcop railway station, six miles east of Appleby-in-Westmorland, Cumbria. (GB2RS)

Also, JA2ZL will be active as F0/JA2ZL from Morea Island in French Polynesia from the 30th of October to 2nd of November. He plans to operate on 40 to 10 meters mainly SSB, with some CW and RTTY. (GB2RS)

And a milliwatt Beacon is on the air on 11 meters from Northern California. AOH is at the top of a very high mountain and operates under FCC rules part 15. This is the same as child walkie-talkie and can be heard on 27.125 MHz. The Beacon is on the air trying to make a point you don't need 20 kilowatts to DX. If you hear it, QSL to aoh@ computermail.net (APC News)

**

THAT FINAL ITEM: INNOVATION IN AMATEUR RADIO REWARDED

And finally this week, a big honor for a deserving ham. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has the details:

--

Brad Phillips ZS5BP has been rewarded for his innovation in Amateur Radio. This by being named to receive the South African Radio Amateur of the Year Award.

Phillips received the honor for his work in introducing the Internet Repeater Linking Project – or IRLP to that nation. South Africa Radio League President Sid Tyler congratulated Phillips on his achievements saying that IRLP is as much part of amateur radio as is HF.

But that’s not all. The award itself says that IRLP offers new opportunities for the development of the amateur radio service in South Africa. This is because it brings amateur radio within the reach of young people in schools and the older generation who, after retirement, often do not have access to High Frequency stations or other ham gear of their own. Phillips work brings ham radio to both.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

The South African Radio Amateur of the Year Award is sponsored by Siemens. Its given annually by the South African Amateur Radio Development Trust to a ham radio operator who has made a major contribution to the Amateur service. (SARL)

> using 10 meters illegally talk/

Perhaps _YOU_ need to listen to the recordings on that site !!

Okay... after listening to the "incriminating evidence", here's my findings.

#1 -- Some guy bragging about "if you can't back it up"... more then likely, he's referring to someone out there that thinks that their radio is stronger then him.

Absolutely nothing was said in reference to trucks or truck drivers !!

#2-- Some guy talking about vacation... overtime... & sick leave. This eliminates almost all of the trucking industry except maybe the teamsters & a few others. The majority of the trucking industry is paid by the mile or load. _NO_ where do they say they drive a truck !

Absolutely nothing was said in reference to trucks or truck drivers !!

#3 -- Two guys & a lady talking about the price of cigarettes & ex's, sounded more like some people on bases chatting.

Absolutely nothing was said in reference to trucks or truck drivers !!

#4 -- One guy say's something about another guy hiding paper towels & toilet paper "back here"... "that's where all of it goes 'cause it never makes it up there to Ft. Smith".

Absolutely nothing was said in reference to trucks or truck drivers !!

#5 -- No sure what's being said here.. something about something where someone's at & anther fellow says something "That corn had some good thickness to it".

Absolutely nothing was said in reference to trucks or truck drivers !!

#6 -- This one I can't make out much except the "panty" part.

Absolutely nothing was said in reference to trucks or truck drivers !!

#7 -- This is a fellow asking someone where they're at in Montana.

Absolutely nothing was said in reference to trucks or truck drivers !!

****

My thought's are that someone's full of crap, there is not even a slight mention or even an inkling of truckers being involved, just more stereotyping. Every conversation on that site could have come from a base with a radio that's been modified by almost any CB Hacknetion.

Larry, I think Buck Rogers and SEDAN are doing it for the entire SE
USA, w/o the relay leaguers. Still no excuse for Kelly getting it
wrong - Again!

2297. Re: What's the deal with 220?

>them, I forget the model, costs more than my FT-50!
>
> There is one exception - I noticed a review in QST of a new Icom unit.
>But that's the exception that proves the rule.

The equipment problem derives from the fact that 222-225 isn't a worldwide amateur band. Most YaeComWood rigs are marketable all over the world, but a rig for 220 has a very limited market.

The lack of international allocation also means an extremely limited DX role for 220, and no satellite ops of any kind.

2 meter FM started in earnest with hams converting surplus land mobile equipment from "high band" (154-174 Mhz) to 2 meters. 440 FM came from hams converting surpuls UHF (450-470 MHz) equipment. 220 had no similar easy source of FM surplus.

And note that weak-signal work centers just above 144 and 432 MHz. This goes all the way back to xtal-controlled multiplier-type rigs, with operation on 432 being obtained by tripling the 432 MHz driver output. 220, again, offered no similar easy solution.

Most of all, 220 propagation isn't that much different than 2 meters. The antennas are a little smaller and the coax loss is a bit higher.

> So here we are worrying about a threat to 220, when it appears that we
>just don't use the band that much.

The same was true of 160 in LORAN days.
>
> I looked up the numbers of repeaters in PA as a test case. Turns out we
>have 37 - 220 band repeaters in the state. Truly not very many.

How many 2 meter repeaters are there in PA?

>I don't
>know how much traffic they handle. 1 is linked to local Law, so
>presumably that's an emergency use repeater, and 2 are closed repeaters.
>

> Seems to me that if we don't use it, we gonna lose it. And we won't
>even notice it except that when we do lose it, other groups may consider
>us better picking for giving up even more spectrum.

More use of 220 means less use of some other band, unless we do the cross-linked repeater thing. Crosslinking is spectrally inefficient, btw - a 220/2 meter crosslink uses 4 frequencies. That's 60 kHz of bandspace to support what may be one QSO! Yes, there are good reasons to crosslink, but spectrum efficiency isn't one of them.

> But exactly WHY don't we use it?

See above.

I guess you think every truck driver starts his transmission off with "Hey, truck driver here." I have monitored these illegal transmission for a number of years now and it is obvious to the most casual of observer that a lot of them are truck drivers. All you have to have is a little common sense to figure it out. Something you apparently lack.

Nice to see someone who also enjoyed the movie for what it was
and didn't get all hung up on worrying about how ham radio might
be negatively perceived by the general population.

It's a movie, and with most movies it involves suspension of belief.
Frankly I thought it was very entertaining, and had an interesting
premise. Sure it wasn't realistic, but how much science fiction
really is?

Even if I weren't a ham radio operator I would have enjoyed the movie,
and I imagine a lot of non-hams enjoyed it too. And as K6JBT said,
it might have evoked some curiousity inothers.

I think this whole thread indicated one of the things that has hurt
ham radio as much as anything else, and that is too many hams take
it all too seriously.

I think a lot of hams forget about how much fun they had when they first
got into the hobby, the thrill and excitement of first getting on the
air and most importantly being a part of the magic of radio.

There is still magic in the air, unfortunatley it's being lost among
the politics and bickering of today and forgetting the joys of
the days gone by.

Sigh, yes, I'll have to be more precise. Most people I know refer to the band as 220, kind of like they refer to 75 and 80 meters as 80 meters.

> 2 meter FM started in earnest with hams converting surplus land mobile

Okay, this is some good stuff. In fact this might be the most important point so far.

Some more good stuff.

> How many 2 meter repeaters are there in PA?

I'm going to work from memory here, Jim (the Penguins are playing, and I can just barely answer email, much less look up precise numbers.
8^)

There are around 400 repeaters in PA

The 37 222 to 225 mHz repeaters are around 10 percent

The 144.1 to 148.0 mHz repeaters are around 60 to 70 percent of the repeaters.

The 420 to 450 mHz repeaters make up most of the rest, with some 28.3 to 29.7 mHz and a few 50.1 to 54.0 mHz repeaters to round things out. I was a little surprised to see tha numbers of 420 to 450 mHz repeaters to be sure.

I ave to repeat that these numbers are approximate, and from memory.

Agreed. I think that argues part of my point, because I noticed a large
percentage of the repeaters were used in this manner.

With that, I agree. To suggest that all truck drivers talk like that is ludicrous. I'll have to recheck his post. Posting one's name may not generate credibility, but using an anonymiser certainly drives the credibility to **zero** in a hurry. Jerry doesn't fit that. Back to the truck driver business; I've met a number of them where I work. Every one that I met was both friendly and most articulate. One guy I met saw me looking over the truck (from a distance). I don't know diddly about trucks, but that thing was absolutely beautiful. He told me he just bought it 3 months earlier. I forget what he said it cost, but it seems to me it was somewhat over $200,000. More than most homes. Sure, I noticed the antennas. Never asked. It is a lot easier to be an idiot over the internet than when you meet an individual and find out he is a decent guy working hard at making a living. On that last point, I would hope all of us would agree.

Whilst I did state it is wrong to paint all truck drivers with a wide brush, I would post this question to you. If one were to run LARGE amounts of power (and this does NOT necessarily imply truckers) or intrude on 10 meters (where a lot of hams get unhappy), would it make sense to do it day after day from a base station? Why or why not? Ever listen to a mobile legal cb mobile? Ever notice how (assuming it isn't skip) often gets stronger for a bit and then weaker. Ever heard skip? Can you usually tell the difference between a skip station and a local station (yes, they might be strong, but fading in and out will occur on a skip station). The fact is that a moving target is much harder to hit. Take the shootouts. Why not just run a gazillion watts from your own driveway? My guess is that most base stations running illegal power will be fairly modest (on the order of 50 to 200 watts). One runs into interference problems with neighbors otherwise. I'm guessing here and would invite some of the skip shooters to put the square dope out on this - but my guess is the real high power is likely run mobile because, as I stated, the moving target is harder to hit. One kid (local in Rochester, NY) was interfering with the local 10 meter repeater. Dumb idea. Too obvious that he was local. All you need is a couple of hams with beams and you know where he is within a few blocks. Now, this doesn't prove truckers - but it almost certainly will be a mobile station to get away with it over any period of time. Of course, some truckers have been caught. Therefore, some folks have drawn conclusions.

One possible reason..... not alot of gear available out there for 220....

True, there isn't much gear, but that goes hand in hand with demand.

There's a Catch-22 if ever I saw one...Two-twenty gear is hard to come by due to a lack in demand. The demand's not there because the gear's not there. Egg...chicken...Why is there air?...Big bang or Creation...Real or Silicon...many of the questions that perplex mankind and are unlikely to be solved here!

I need a Xanax!

Where has you folks been? Packet radio was doing its thing country wide starting in the early 80s or so. It was so hot to trot you couldn't find a place to park. The BBS's were clobbering the keyboarders and it was turning into total bedlam.

Where did it all go? Why did it all end??? Did a large hunk of rock from the meteor belt flip out and trash the hub? Nope.....were on it right now. Its called the internet.

Been there done that.

...And some of have gone back, but not to this measly 1200 - 9600 baud. The first six 802.11b wlan channels fit fully into our overlap at 2390-2450 (the devices are 2401-2448 for the overlap, and 2401-2473 for their full range [channel centers at 2412-2462 in 5 MHz steps w/ +/- 11MHz modulation]). Even 1Mbps is better than ancient packet, let alone 22Mbps. With the part 15 overlap, we can be on the Internet too! :-)

For the most part, the hams who started using FM voice on the VHF/UHF ham bands back in the late '60s and early '70s did so by converting surplus commercial land mobile. It was easier, cheaper and quicker than building from scratch, and until the mode was established there was no manufactured gear aimed at the ham market. Nearly all repeaters used converted surplus, too - even down to the duplexers.

Some models were easy to convert - just buy new crystals and retune. Others needed more work, like padding the tuned circuits, building power supplies and control circuits. A few folks built outboard VFOs to avoid the high cost of crystals, at least on receive.

But with no surplus for 220, getting on the band meant building everything. Why bother, back when 2 and 440 had lots of available pairs?

>> And note that weak-signal work centers just above 144 and 432 MHz. This

>> being obtained by tripling the 432 MHz driver output. 220, again, offered
>>no
>> similar easy solution.
>
> Some more good stuff.

Just history. The same exciter and crystals could be used on both bands.

Here's another point: The reason Novices have 220 privs but not 2 meters or 440 was an effort to get more occupancy of 220. But most folks who were interested in VHF/UHF simply got a Tech license. This trend was clear long before the Tech lost its code test in 1991. As early as 1983, most new hams were going straight for Tech, because it gave all amateur VHF/UHF and Novice HF. When the

Tech/General written was split into two parts in 1987, the trend increased, and when the Tech lost the code test - you know the rest.

Here you go. By the way, although annoying what the person may be
doing
it is not against Comcast's AUP. Just ignore the person! I swear
there
should be an international law that requires people to take a test
before getting internet access!!

First Question:

If someone is avoiding your killfile you should
A. Stalk them
B. Cry to their provider
C. Ignore them
D. Call the police

And the correct answer is "C".

>

The point is instead of just ignoring any posts from someone that
annoys you, like the reply to you message said to do, you choose
to attempt to whine to someone's ISP that some big bad boy is
changing his id to avoid your killfile. Just like my posts, if
they cause you to get your shorts in a wad, just ignore them.

Here is the quiz again, see if you can get the correct answer.

First Question:

If someone is avoiding your killfile you should
A. Stalk them
B. Cry to their provider
C. Ignore them
D. Call the police

And the correct answer is "C".

Why do you post to a ham group? Are you a ham?

So you're not a ham, but you post to a ham newsgroup. According to
your replies to me on the cb group, I should not post there as I
do not operate cb. So why are you here?

Newsflash Mopehead, you are also cross posting to
rec.radio.amateur.policy which, in case you missed it, is a ham
newsgroup. I ask again, if you're not a ham, why do you post to a
ham newsgroup?

Newsflash - check your newsgroups. You're both posting to both rec.radio.cb
and radio.amateur.policy. I'll admit Windows is nasty, but check the
headings. As far as Mopar, 30L-1? What's wrong with a Henry 2K? Had a lot
of fun with that one on Guam.

More reasons:
#2 For the cost of the gear that is available you could spend it on 2/440
gear and get lots more bang for the buck!
#3 Why by gear for a band that you'll be the only one in your area to have
use of? If I bought a new 222 rig right now it would never get used because
I'm the only one in 3 counties that would have one, in other words who would
I talk to on it?

Your point looks like you got schooled asshole LOL trying to find a way to silence me LOL and Comcast doesn't answer your emails LOL The funny part is you are trouble Moped, that's probably one reason why you x-no archive your posts. Thanks JJ for providing the laugh he has been taking notes from Landshark on how to cry to ISP's and the best part is there is not a damn thing they can do about it they have been trying to silence me for close to 2 years. I used to think Moped was some kinda tough guy now I see he is just a pansie who has no balls.

> "into the 21st Century."

Certainly did happen. But not by the nocodes. One question is how many
nocodes ever actually put nodes on the air and/or how many of those
are still on the air? I can't find a node run by a nocode or a 5wpm
tech anywhere along the east coast (NoNodes?). In fact every node I've
been able to track down so far is operated by either a 13wpm Advanced
or a 20wpm Extra class licensee. There went another techie "digital
radio contributor" myth.

In a similar vein and in the more recent timeframe we've gotten a
repeat of same blather of course. If only the FCC would knock off the
code tests the new codeless wonders would "take ham radio into the
21st century" with their whizzy "advanced technologies" like spread
rectum. The TAPR ham SS project was funded five years ago and all of
hamdom is still waiting for the first ever ham SS qso. In the
meanwhile Ericsson & Nokia have been churning out throwaway SS two way

radios by the tens of millions.

> Well, here we are, and Packet Radio isn't even
> on the radar screen anymore.

Huh?? 2m Packet is out there in volumes right now and you're surrounded with it. In your own back yard you have nodes at W3PP (Laurel DE) on 145.670 (FRC), AA1K (Felton DE) on 145.530 (FRC) and WR3L (Baltimore) on 145.610/440.950 (PVRC). Each of which serves a multitude of users right in your countrified neighborhood. What does it take to get on your screen Larry?

> I keep seeing TNC's being advertised,
> but they must be being used strictly for local work and DX Cluster,
> etc.

Yeah, that's quite true. The New Castle HRO store just had another two-foot stack of Kantronics TNCs delivered. There's a message.

Are local work & the DX clusters bad things? Whatta ya want outta two meters?

And by the way, it's not so "local", a packet sent from Virginia pops up on screens all over New England within seconds.

Come to think of it, Mopar, we had a KWM-2 and a 30L-1 in the second position of that shack on Guam. It was a 75S-3 and (dang, getting old ... can't remember) whatever with the Henry that was in position #1. Position #3 was a Heathkit transmitter and two receivers for diversity reception (between two antennas - one at 60 feet, the other at 102 feet) which we used for RTTY. I had a ball with RTTY.

The transmitter you are thinking about to complete the S-line was the
32S-1/2/3. I think most of the military/MARS stations used KWM2A
transceivers. The one with the crystal switch adjacent to the band switch.
I am quite familiar with them all. Still a good station for ssb.

Dan/W4NTI

Nice reply.... Squirrel Boy, but you still haven't answered my question....
so I'll try again.

Now I hope this one doesn't ricochet of your overly sloped forehead like the
last one...

Where in _ANY- of those sound bit's is there _ANY_ reference to anything
truck related as to justify saying that truck drivers were involved?

And the pirate CBers claim NOBODY is on 10m illegally. Hum.... the last I checked anything between 28000 KHz and 29700 KHz was the Ham 10m band. Sounds to me like the FCC can get a good two-for-one deal. Bust the bozos buying the amps, AND bust them for being on the Ham bands too. Not bad.

Not quite. There was an article in the magazine QST (published by the ARRL) about this. As I recall, the candidate must demonstrate some knowledge of morse code but does not need to be able to copy a transmission or send in morse code.

Anyone can sit and listen to the conversations any day and quickly figure
out that they are drivers.
"Whut's yer twenny thar, DRIVAH"? "AH tan fer thar, DRIVAH. AH just topped
the hill at MP
21 with 34,000 pounds thar, DRIVAH" And I can go up the road a-ways to a
Pilot Travel Center,
visit the CB radio case and find all the Galaxy and Connex 'reddios' I want,
and it doesn't take
rocket science to figure out who these illegal rigs are aimed at. Truck
stops? Truck drivers? Ten
Meter radios in the case? Now WHO would be most likely to visit a truck
stop?
It makes no difference. Since Mr. Walden (WB7COE) was appointed to the
House Sub-com-
mittee on Communications (chaired by Billy Tauzin), letters have been
a-flying. Mr Tauzin has been
made aware of the illegals, complaints are being heard, and something WILL
be done. It is a shame that a few selfish ones ignore the laws in place to
protect ALL users of radio and, in the pro-
cess, will likely bring down hardship on legal CBers as well. If you don't
believe that ham radio has
a lot of support in Congress right now, type in "Greg Walden" in your search
engine and see how

many sponsors various bills favorable to ham radio have garnered. It is not inconceivable that that
favorable image Amateur Radio has will go a long way to garner additional support for laws pro-
tecting Amateur Radio frequencies from incursion by illegal operators as well as commercial interests.

Some of us were (*ahem*) SWLs or scanner listeners for years before we
got into CB or made the decision to become hams. Maybe a lot of the
"out of the closet" type posters to the group are SWLs as well.

This is very true... tho I don't know how "BAD" I am because I don't drink, smoke, use dope, gamble, go to bars, screw other guy's wives, carry weapons, or ride a Harley---let alone rob or kill people. But the law-boys in the group seem to think I'm Jesse James, to hear them talk.

I know..........LMAO! I'm sure by the time I get back
from Mexico he'll have at least a half dozen in reserve.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Landshark's sig IS very confusing. He says being a bad citizen is fun
but apparently this only applies to breaking FCC rules, and only
extends to people he agrees with. Some kind of wierd double standard I
guess.

LOL, write to Google all you want, it won't change my support of legal
CB and criticism of illegal amps, freebanding, and 10 meter
bootlegging.

Well, I know some amateurs who can copy code quit well, but far as
being capable and effective at amateur radio communications, they
are pretty pathetic. So what does that say Larry?

The UK has introduced a new "Foundation License" which requires taking
a 10-hour course on ham radio topice plus a test for "code character
recognition" at what amounts to as long as it takes to identify the
characters from what we in the U.S. call a "cheat sheet". There are
operating privelege restrictions but I don't know what they are. The
prefix is M3. The annual cost of the license is around US$25.

The Japanese have had a nocode HF license for years, power output is
limited to 10 watts.

Lloyd:

Right -- but it tells you everything about his abilities as a capable and effective amateur radio communications provider.

Brian:

The only node I can hit from this list is Jon AA1K's PacketCluster node. It's useful for DX'ing, but doesn't provide typical PBBS services I'm used to from the old days. I would need a very reliable band opening to get into any of those other nodes.

>Are local work & the DX clusters bad things? Whatta ya want outta two
>meters?

No, they're not bad things -- but I want to be able to send/receive general packet message traffic, NTS traffic, and BBS type messages the way I used to be able to on the local MSYS BBS's.

>And by the way, it's not so "local", a packet sent from Virginia pops
>up on screens all over New England within seconds.

Yeah, but it's just a DX spotter's report.

Larry doesn't get it...
The issue comes down to the lack of any speific need to have someone
learn morse...not IF they can learn it. The question is now simply
turning on one's personal desire to learn and use morse IF they
so choose. No different than people who "could" learn to
drive a manual gearbox automobile but choose not to. No need,
no harm, no issue!

Cheers,
Bill K2UNK

Alabama used to have one of the best packet systems in the country. Many dedicated hams put in thousands or hours and dollars to keep it running. Then it all came crashing down. One by one the links dropped never to be heard from agian.

At one time you literally had to wait till the middle of the night to keyboard anyone because of the heavy BBS forwarding. Then it all went away.

Now we have APRS. That burps out and tells the world about the wx and someones location.

And a DX Packet cluster that takes three nodes to get to.

Thats it. Ive been running a beacon for a week. No replies at all. Pathetic.

And poor Llllloooooyyyydddd can't even do 5 words per minute.....how many years you been trying LLLlllllloooooyyyydddd? seven eight?

Oh and I believe the record for copy by ear was 74.... by a fella called McElroy, someone come in here and correct that. I know damn well it wasn't 90.

Bwwwwwwwaaaaaaaaaaaaaaaa!!!!!
